

Put Professional Touch On Easter Piece de Resistance

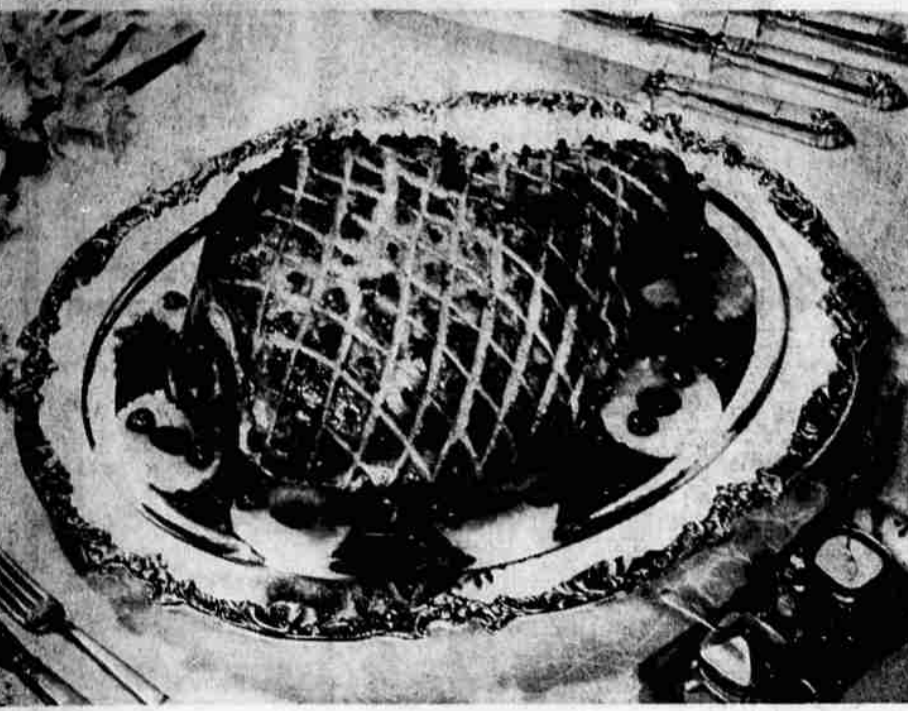

Baked ham is, of course, the traditional Easter Sunday dish. It is also one of the most aggravating things any housewife can attempt to prepare. Yet the trick of achieving a rich, brown glaze over a diamond-scored, clove-studded ham, nestling in a bed of pineapple and garnished with pineapple rings, is essentially a simple one. So, if previous attempts to pro-

duce the kind of culinary masterpiece an Easter ham should be, have ended dismally, there's no real need for despair. The trick is in covering the ham with honey—smear on liberally—and then putting on enough dry brown sugar to cover it completely. Care is needed in handling oven temperatures, too. The bulk of the baking, 15 minutes

per pound for canned, tenderized or "smoked, ready-to-eat" hams and 25 minutes per pound for the old-fashioned type, should be done at 300 degrees, F.

Then, for the last 25 or 30 minutes, run the temperature up to about 400 degrees for the final browning effect. After the first few minutes in the oven some of the honey and brown sugar will melt and combine with

the drippings in the bottom of the baking pan. To this should be added just enough water to keep it from burning, into which two teaspoons of Accentura Aromatic Bitters have been mixed.

Recommendation For Gas From Canada To N. West Stirs Up Mixed Emotions

By The Associated Press
The Alberta Conservation Board's recommendations that the province export part of its natural gas supply to the Pacific Northwest drew mixed reactions Thursday.

Burl Hagadone, vice president of Trans-Northwest Gas Co., one of the companies seeking distribution rights, hailed the recommendation as "certainly good news, especially for Eastern Washington and Northern Idaho."

On the other hand, N. Henry Gellert, president of the Seattle Gas Co., expressed disappointment. He said the action dims hopes that Seattle and other Northwest cities will be able to tap the Cana-

dian gas supply and the area will have to turn again to Texas. The Board's recommendation to the Alberta Provincial Legislature Wednesday proposed export of natural gas from the Peace River area, where, the board estimated, 300 billion cubic feet of gas is available.

The board said Alberta will need 4.2 trillion cubic feet of gas in the next 30 years and recommended the remainder of the established reserves be retained for the province.

The Alberta government is not bound by the board's findings and Premier E. C. Manning was mum on the position the government will take. The legislature will study the report, he said.

The board recommended an export permit for Westcoast Transmission Co., Ltd., and Westcoast Transmission Co. Ltd. (Alberta incorporation.) The company would be authorized to pipe the gas from Peace River to British Columbia and to the United States.

Westcoast pipes would carry the gas from near the Alberta-British Columbia border to a point near Sumas, Wash., where the line would turn south into the United States.

A branch line would take the gas to Vancouver, B.C. Hagadone, whose firm has applied to the Federal Power Commission to distribute the gas in Eastern Washington and Northern Idaho through a tie-up with West-

coast, said he would have to see the full report to determine what the company may expect.

However, he said if the company's plans go through it should be able to pipe natural gas to the Spokane area by the latter part of 1953 or 1954.

Gellert was less optimistic. He said the 300 billion cubic feet to be exported from the Peace River region would not justify a pipeline south from British Columbia.

Gellert said the Seattle Gas Company intends to renew negotiations to bring gas to the Pacific Northwest from Texas. He estimated the area needs five times the amount of gas recommended by the Alberta board.

Bureau Holds Channel Bids

Opening of bids for construction of a new Lost River channel in Langell Valley has been postponed from April 9 to April 16 by the Bureau of Reclamation to allow time for revision of some wording in contract specifications.

The job proposed includes dredging out a channel about six and a half miles long from near Malone dam down the valley to near the junction with Miller Creek.

In that locality the river fingers out into several streams and sloughs instead of following a definite channel, spreading over and around considerable meadow and farm land.

The channel to be built is to have a 45-foot bottom in the Miller Creek vicinity and will narrow down to about 20-foot bottom width toward the upper end.

The work includes about three quarters of a million cubic yards of excavation.

Irrigation Picture Good

PENDLETON — The Umatilla and Walla Walla River areas will fare all right this year, but they will not have the abundance of irrigation water other areas expect.

That's because the soil is drier than normal and will soak up much of the water to come from the above-average snowpack in the mountains, water forecasters said here Wednesday.

The snow cover in the Umatilla basin is 22 per cent above the 10-year average. This ensures that there will be enough water for irrigation, speakers said at the meeting at which W. T. Frost, Medford, Soil Conservation Service, presided.

The Walla Walla basin has a snow cover about 30 per cent above average, assuring good irrigation supply, although the ground here is also dry and will soak up much moisture.

NLRB Rules For Grain Union

WASHINGTON — The Buchanan-Cellers grain Co. of McMinnville, Ore., was told Wednesday not to interfere with union activities at its grain, feed and seed plant.

The National Labor Relations Board ordered the firm not to discriminate against workers and not to interfere with their membership in the AFL Grain Millers.

Modoc Hay Setup Better

ALTURAS — A far-reaching search for hay has greatly lessened danger of a hay famine among Modoc County's estimated 35,000 to 40,000 head of beef cattle, Acting Farm Advisor Norman Nichols has reported.

The Modoc County Cattleman's Association, under the leadership of Walt Rodman, Cedarville, went as far as the Sacramento area to gather feed, and some was found in the Tulelake area.

Heavy snows had earlier cut off the early range grazing season, but rains this week lightened the snow and grazing may get under way soon.

The cattleman's association, Nichols said, is acting as a clearing house for ranchers needing feed for cattle.
