Doctors Develop New Ulcer Operation

By ALTON L. BLAKESLEE, AP Science Editor.

NEW YORK—A new operation for ulcers doesn't touch your ulcer. The ulcer is left alone, to cure itself.

The operation removes 75 per cent of the stomach.

It takes away most of the upper part of the stomach, which is the part that produces the acid that causes ulcers. With the cause gone, the ulcer gets well by itself and new ulcers apparently will not get started.

The operation saves the bottom part of the stomach, with its valve that keeps food from being emptied out of the stomach too soon. The nerve regulating this valve also is saved.

Quick-emptying of the stomach can cause weakness, loss of weight, heart palpitations and other troubles. This kind of distress often

Material is available on many crafts and more can be ordered. Some of them include dolls, plastics, rug making, silk screening, block printing, jewelry and metal craft, quilts, paperwork, wood carving, leather, crafts, textile painting and figurine and china painting.

The library needs new readers. Hours of service are from two until five on Monday, Wednesday and Saturday afternoons. Won't you stop by one day this week?

The patient is left with a small stomach, but half of them soon become able to eat nearly normal sized meals, the surgeons said.

Crater Rim Route Open

The rim road around Crater Lake 25 miles of scenic drive, opened yesterday—the latest in the season it has been opened up in recent years.

Two Crater Lake national park thoroughfares are kept open the year around, but side routes and the East and North Entrances, as well as the rim drive, are closed during the winter.

Last winter's record snowfall coupled with snow drifts and slides kept the rim route closed to traffic until now.

Chief Ranger Lou Hallock reported today that Mount Scott lookout is nearing completion, but probably won't be used until next fire season.

Traffic through the park has been fairly good, and temperatures at the park have been ranging into the 80's daily, Hallock said.
