

TESTING 4,000 GALLONS per minute on a 58 foot lift is the latest of four producing wells on the Delos Mills ranch south of Macdoel. Just completed, the well was drilled by George and Ken Hartley and is being tested by the Interstate Pump Company, Klamath Falls. Mills has cleared 500 acres of his

1100 acre ranch and as wells are developed for irrigation, expects to bring it all under cultivation in the future. Pictured (l to r) Ari Reed, testing well; George Hartley, driller, and Vic Caster, diesel maintenance man.

Dust Storm Aid Funds Approved

WASHINGTON (AP) — President Eisenhower Tuesday signed a bill appropriating an additional \$50,218,741, including 15 millions for work to combat dust storms in the Southwest and other drought areas. The bill provides funds previously allotted to a dozen federal agencies for the current fiscal year ending June 30. The largest item is \$215,000,000 for veterans compensation and pension payment. Other large allotments include \$55,000,000 for the federal aid roads program, \$30,000,000 for aid to school districts

whose pupil population has been swollen by federal activities, and \$68,000,000 for public assistance grants to states.

Experimental Wheats To Be Tested At Tulelake

TULELAKE — A group of wheats known as Durums, will be experimentally grown at the Tulelake Field Station this year for the first time, according to Burt Hoyle, field station operator. Wheats of this class are not known to be grown commercially anywhere in the Klamath Basin. The particular use of Durum wheat is for macaroni and other semolina products. In order to classify as a good macaroni wheat the Durum must be particularly hard and vitreous.

The original Durums were introduced into North Dakota by Russian immigrants and one of the early varieties, Kubanka, is still one of the leading producers. The University of California is testing at the field station eight of the better varieties. Durum wheats are in two classes known as the Amber and Red. The Red Durums are not used in macaroni manufacturing and are not of much importance except as a feed wheat. Neither the red or the amber are suitable for bread flour and often are so hard as to be

wheats have lower protein and are used for cake and biscuit flour. Of interest to most growers in the Klamath Basin in the past had been the white wheats, White Federation, Onas, Poso and Burt. White wheats are all types, some being soft and others hard.

VFW Auxiliary Holds Meeting

Cecelia Hofer, Portland, department president of the Veteran's of Foreign Wars Auxiliary spoke at the meeting of the group in the VFW Hall May 6. Her information was on veterans of various wars.

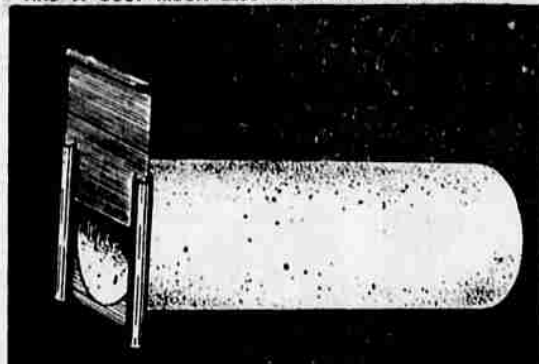

A no-host dinner at the Willard Hotel preceded the meeting. Mrs. Blanche Beldrain, president of the Malin auxiliary, was also a guest.

The next meeting will be May 20. All members are urged to be present to prepare for the annual poppy sale the last of May.

STRIKE

TAIPEH, Formosa (AP) — A Russian-built MIG15 jet was damaged in one of two clashes between Chinese Nationalist and Red planes off the China coast Tuesday. Nationalist air force headquarters announced Tuesday night.

Shell NH₃ Service is

THE SURE WAY TO FEED CROPS

... so you net higher profits

ONLY root zone application of nitrogen — as Shell NH₃ Service provides it — assures you of uniform, all-season crop feeding.

Shell NH₃ applied this way can bring yield increases up to 50% or more. A return to growers of \$4 for each \$1 spent is the rule rather than the exception.

Over 500,000 NH₃ field applications testify to the unequalled experience behind this Service. And Shell makes sure you get the benefit of this experience on every application.

Your local Shell NH₃ Service Dealer brings trained men and specially designed equipment to your place. Your fertilizing is handled with scientific precision... you save on operating costs... and with Shell NH₃ you can be sure you get full value from your nitrogen fertilizer dollars every time.

Start figuring on higher net profits by feeding your crops this SURE way. The dealer listed below will serve you promptly. Call him.

TWO SHELL-DEVELOPED WAYS TO DO IT

NITROGATION SERVICE®
... meters anhydrous ammonia into irrigation water. The fertilizer is carried by the water into the root zone. It combines with soil particles... plants can begin feeding immediately. Irrigation and fertilizing become one job.

NITROJECTION SERVICE®
... employs Shell-approved equipment to inject this nitrogen-rich NH₃ at root zone depth. Here NH₃ combines with the soil immediately. Cultivating and fertilizing become one job.

Either type of Shell NH₃ application is handled by local men who know crop conditions in your area. Through these men you benefit by Shell's unmatched experience in root zone fertilizing.
