So here's a suggested "watch" method of having your cake and eating it too . . . Eat good breakfasts and lunches. They are important—far more so than is dinner—because you operate on the energy gained in the day's first two meals all day. And as for dinner—you sleep on it. And, consequently it grows on you. It'll happen every time.

Okay, so dinner's the meal we've got to concentrate on to watch those calories and keep things under control. And here's a quite successful way to handle the evening meal.

Merely start it off, a few minutes before sitting down, with a full, fresh glass of Grade "A" milk.

You will be surprised how your appetite will diminish. You'll eat all you want. The thing is, you won't want so much. Take it from me . . . try it.

Becky.
