

Poultry Is Big Business In Cal.

Poultry is big business in California, especially in Northern and Central California.

Perhaps more than some other industries, the poultry business has difficulty in matching supply with demand and as a result is the victim of price fluctuations. Moreover, the California industry suffers from competition from the deep south tier of states.

Nevertheless the cash farm income from poultry in California ranges between 250 million dollars and 300 million dollars a year, which puts the industry in the big business class.

The industry has many problems, not the least of these is "integration" in which different operations in the industry usually performed by individual entrepreneurs are "integrated" by one operator who supplies the capital for all operations.

Friendly Kitchen

To get the most out of your kitchen, architects suggest that you select one of the durable softwoods for cabinets and paneling and then let the wood do the job of making the room cheerful and friendly. The warm texture of wood is best exploited by using a clear lacquer finish to retain the natural, soft, golden tones and the rich, never-the-same grain. A bar varnish on exposed surfaces makes wood easy to maintain.

SLIGHT OVERSIGHT

MONROE, Wis. (AP)—Voting was so light in the spring election that one rural resident dropped into the polls and stayed almost all afternoon chatting with members of the election board. When he finally left it was discovered he had forgotten to cast his vote.
