

Candidate Cited For Deflation

WATSONVILLE, Calif. (AP)—A candidate for mayor Tuesday accused a candidate for alderman of deflating him—or rather the tires of his two campaign trucks.

Candidate William DeWorke filed the charge—unlawfully tampering with his motor vehicle without permission—against candidate Harold Perrault. He said two witnesses saw Perrault deflate the tires.

Municipal Judge Charles Franch took the case out of the campaign, scheduled a hearing May 12, the day after election.

Uvalde, Tex., is said to be the greatest honey-producing center in the United States.

Glittering Labrador Base Has Changed Since 1942

GOOSE BAY, Labrador (AP)—This glittering air base with its aluminum-trimmed living quarters, ice rinks and swimming pools is a far cry from the makeshift field that greeted wartime bomber ferrying crews in 1942.

Now, as then, the U.S. and Royal Canadian air forces are based on opposite sides of the airfield.

The RCAF maintains the network of 9,000 and 11,000-foot runways and mans most of the base radar facilities.

The USAF unit is under Strategic Air Command and its commitments through scores of KC97 tanker planes are to keep SAC's airborne B47s and B52s fueled.

MDs Admit 'Mercy Killing' Spurring Fresh Debates

LONDON (UPI)—Two doctors' admissions that they have used drugs to hasten the deaths of incurable patients are spurring fresh debate on the merits of "mercy killing."

Dr. Maurice Millard, son of the founder of the Euthanasia Society, and Dr. Charles McDonald, its current president, both admitted using drugs to put dying patients to sleep, "knowing that death might ensue."

Both men said they are sure no other doctors have done the same.

Police have taken no action against the two men because no formal complaint has been filed and it is uncertain that one will be. No one complained to the police when another doctor confessed a mercy killing in a television broadcast some time ago.

Millard touched off the debate with a Rotary Club speech Monday. The patient he "helped" to death was an 80-year-old woman suffering from cancer.

"I gave the old lady a dose of a drug and was prepared to give her another if she showed signs of waking up again," he said. "She couldn't have lived for more than two or three days."

McDonald said Tuesday he "fol-

lowed the same course" in a similar case 20 years ago.

Churchmen and doctors promptly took sides, newspapers were bombarded with letters to the editor, and editorialists lined up on one side or the other.

Msgr. Michael Gilleran, senior Roman Catholic priest in Leicester, where Millard practices, said no Catholic doctor would "administer a drug for the express purpose of killing."

Leslie Wetherhead, ex-president of the Methodist Society, argued on the other hand that if euthanasia had been legalized "the old lady could have gone away in peace and dignity instead of suffering months of useless agony."

London newspapers lined up generally against mercy killing.

"It would be arrogant for anyone, however strong the provocation, to cut short an innocent human life in the supposed interest of humanity," said the Daily Express.

MAILMEN
RIO DE JANEIRO, Brazil (UPI)—Postmaster Agelico Loureiso was unimpressed by the report that a U.S. mailman who has just retired was bitten by dogs 10 times during his career.

"Our rural carriers are often bitten by jaguars," Loureiso said.

Martin Auto Probe Slated

HOOD RIVER (AP)—Search will be resumed next weekend for the three members of the Ken Martin family of Portland who still are missing.

It is believed their bodies are trapped in their car somewhere in the Columbia River in this area.

The family vanished on a motor trip last Dec. 7. There was no trace, despite intensive searching, of the Martins until Sunday when the body of Susan Martin, 10, was found.

Monday the river yielded the body of her sister, Virginia, 12. Autopsies indicated they had drowned and that the bodies had been in the water for many weeks.

Tuesday skin divers and other searchers looked in areas where roads run parallel to the river above Bonneville Dam. But they failed to find the automobile or the bodies of Martin, his wife and their other daughter, Barbara, 14.

Sheriff R. L. Gilmore plans to direct volunteers in a renewed search of the Columbia and its tributaries over the weekend.

Earth's Hydrogen Halo Reported By Scientist

By FRANK CAREY
Associated Press Science Writer

WASHINGTON (AP)—The earth is surrounded by a harmless halo of hydrogen at altitudes between 50 and 20,000 miles, a California scientist reported today.

Another researcher said a known weak spot in the earth's magnetic field may account for the gap between two dangerous doughnuts of radiation discovered in space.

These separate phenomena were described to the annual meeting of the American Geophysical Union in reports prepared by scientists of the Lockheed Missiles and Space Division, Sunnyvale, California.

Dr. Francis A. Johnson told of the hydrogen halo, which he described as a glowing veil.

He said it is a cloud of hydrogen gas made up of electrically neutral atoms of the chemical. Its existence became known from radiation detectors aboard satellites and missiles.

At first it was believed to be something coming from far out in interplanetary space, Johnson said, but new research shows that it is actually a part of the earth's outer atmosphere.

Though it has a certain glow, he related, it can not be detected from the earth's surface because the radiation is absorbed in the earth's atmosphere at an altitude of about 50 miles.

Dr. Alexander J. Dessler of Lockheed offered the new theory to explain the gap between the two belts of Van Allen radiation which encircle the earth. They are considered potentially hazardous to space travel.

These two belts—named for Dr. James Van Allen of the State University of Iowa—hang suspended like monster doughnuts around the earth, but with openings above both the north and south polar regions.

The first belt begins at about 1,300 miles altitude and extends to about 3,000.

Then there's a 5,000-mile gap before the second belt begins at about 8,000 miles.

Dessler believes the 5,000-mile radiation-free gap between the two doughnuts is due to the Cape-town anomaly. That is a weak spot, approximately 1,000 miles long and 300 miles wide, in the earth's magnetic field near the southern tip of Africa.

The existing bands of Van Allen radiation consist of charged particles—either electrons or protons—that are trapped by lines of magnetic force extending in great bows upward from the earth's surface. The particles of radiation spiral back and forth from north to south along these lines of force, and at the same time drift eastward around the earth.

According to Dessler's concept, the bowing line of force that starts at Capetown is so weak that it can't keep the particles trapped. Thus, some particles, in falling into this weak spot, are absorbed by the earth's atmosphere—thereby causing the radiation-free zone.

Wyoming Mayor Reelection Due

JACKSON, Wyo. (AP)—Barring an unexpected write-in campaign, Harry Clissold, 66, will be elected to his 12th or 13th term as mayor next Tuesday.

"It's been so long I can't remember," Clissold said when asked the date of his first election. It was 1935 or 1937.

"I've been trying to get someone to take the mayor's job for years, but just can't seem to get rid of it," he remarked.
