

AFTER A WINTER'S WAIT these boats are thawing out and about ready for the water again. They were snapped while the photographer was on an inspection trip at Diamond Lake a couple of weeks ago. Almost all the snow was gone on that date.

THE MAIN LODGE at Diamond Lake was almost free of snow when this picture was taken two weeks ago. The grass in the lawn was already green and the last of the drifts were going fast in the shadows.

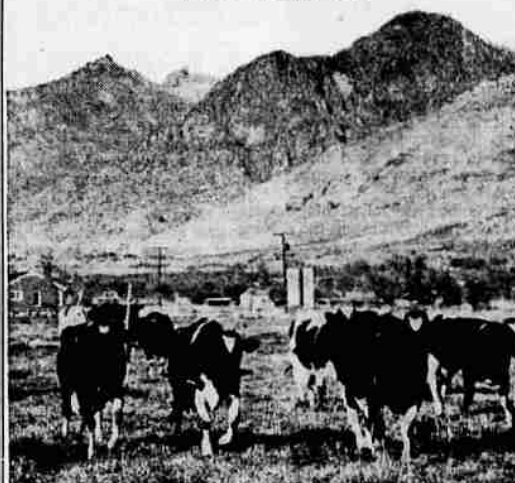

THE JUTTING BOAT DOCKS at Diamond Lake looked bare with only one small outboard berthed. But when you consider that this picture was taken on May 4 the reason is obvious. The season is still a little way off. Viewers will notice the absence of snow at the mountain lake site.
