

Leading Red Scientist Lauds Latest Venture

MOSCOW (AP) — The Soviet Union claims the flying menagerie she lobbed into space last week is the most powerful single-stage rocket yet sent up from either side of the Iron Curtain.

A leading Soviet scientist hailed the Soviet feat of recovering the two dogs and a rabbit safely after their flight as "an important step in solving the problem of space flight by men."

"It won't be long now before we see people flying into space," declared Dr. Grigory Khrushchev, corresponding member of the U.S.S.R. Academy of Sciences over Moscow radio.

It was not announced whether the propelling rocket had gone in orbit around the earth or whether it had burned up on re-entry to the earth's atmosphere.

The Soviet announcements did not give details of the rocket but a commentator on Moscow radio said: "It is the most powerful single-stage cosmic rocket sent up so far. It is much stronger than anything the Americans have."

The earth satellites which the Soviets and the Americans have sent farther out into space have been powered by multi-stage rockets.

The animals' space flight and their recovery was termed "a new achievement for Soviet science" by Dr. Khrushchev.

Soviet officials did not disclose how high the animal-bearing missile went, but the Soviet Union previously claimed one of its one-stage geophysical rockets reached a record altitude of 294 miles. The Soviets said the animal shot reached a great height.

Dr. Khrushchev said ballistic rockets of various range had long been used in the U.S.S.R. for scientific research.

"They furnished much valuable material on the upper layers of

the atmosphere, on cosmic rays, on magnetism of the earth and on behavior of living organisms during cosmic flight."

In another broadcast on Moscow's home service, the deputy director of the Soviet Institute of Automatics and Telemechanics said the "Soviet scientists' new victory shows us once again that the day when man is to penetrate

the cosmos is not far off." The official was not identified by name.

"The Soviet launchings would have been impossible," he added, "without precise, highly reliable, compact and faultless automatic and telemechanic instruments to secure the landing of the cone and container with the scientific equipment and experimental animals

which were separated from the rocket."

The first space traveler of note was Laika, the little Soviet dog that went into orbit with Sputnik II Nov. 3, 1957, and died in less than two weeks when its oxygen gave out. It traveled as far out as 1,200 miles from the earth in its orbit.

In July 1958 the United States

sent a mouse 600 miles up in a several-stage rocket. It landed 6,000 miles away, but the cone was not recovered. A month later the Soviets claimed to have shot two dogs 281 miles into space and brought them back to earth alive.

The first American space travelers to be recovered were the two monkeys Able and Baker which a Jupiter missile last May

carried 300 miles above the earth in an arc which extended 1,500 miles out into the Atlantic. Able died after her return during an

operation to recover part of an instrument used to record her reactions.

Air Pioneer Mishap Victim

ST. PAUL, Minn. (AP) — A high-altitude balloonist who pioneered in the space age became one of its first casualties Monday.

M. Lee Lewis, 46, who once shared the manned balloon altitude record, was killed standing in an open basket gondola just three feet above ground.

He was hit by a 15-pound steel pulley that fell 65 feet while Lewis was testing the gondola's stability.

Lewis had been flight engineer for Winzen Research, Inc., of Minneapolis since he left the Navy two years ago.

With partner Malcolm Ross, a naval commander, Lewis hit 76,000 feet in a 1956 flight from near Rapid City, S. D. This was world record, but was surpassed the next year by Maj. David Simon of the Air Force, at 102,000 feet.

'59 HILLMAN
4-DOOR ESTATE WAGON

Roomy plenty of space for family and luggage. 100% utility. CAR LIFE says: "Americanized styling, ample performance and elegant comfort gives HILLMAN LIFE'S BEST BUY AWARD."

NEW HOPE FOR... PARALYSIS VICTIMS

Through New Discoveries!

AMAZING RESULTS AT SPEARS

The discoveries and developments made at Spears Chiropractic Hospital for the treatment of most diseases are bringing relief to many sufferers who believed they were doomed to invalidism.

Thousands of patients from every state in the Union and several foreign countries enter Spears Hospital each year. Though no claims are made for cures, many patients proclaim their results as miraculous. Only nature cures and all a doctor can do is assist in this great work. Because about 90% of our patients reach us after having been given up or declared incurable elsewhere, naturally some of them arrive too late for complete relief, but a majority go home well satisfied and happy. Chiropractic treatment gets at the cause of disease instead of being just a palliative measure.

For further information, see your local Chiropractor and write Spears Chiropractic Hospital for free documented proof of results in scores of different diseases. Also send names of friends to whom you want us to send our literature.

MUSCULAR DYSTROPHY
Muscular Dystrophy is a paralysis resulting from disturbances of the nerves allowing an infiltration of fatty tissue in the muscles which in advanced cases may bring about total paralysis. Paralysis begins in the legs, gradually spreads upward unless arrestment can be obtained.

MUSCULAR ATROPHY
Muscular Atrophy results from the disturbances in the front part of the spinal cord and usually begins with atrophy or wasting of the small muscles of the hands. Later it may extend to other muscles.

MULTIPLE SCLEROSIS
Multiple Sclerosis results from impairment of the spinal nerves, spinal cord and the brain. It is brought about by many causes, the predominant one being injury to and pressure on spinal nerves and spinal cord, resulting in circulatory and nutritional disturbances. The age onset varies from twenty to forty years and the instance is higher in women than men. It is estimated there are approximately 250,000 cases in the United States.

CEREBRAL PALSY
The name Cerebral Palsy means brain paralysis. It is no respecter of sex and most cases originate prenatally, during birth or from three to six months after birth. There are varying degrees of this condition.

Although some cases experience certain degrees of flaccid paralysis, most victims of Cerebral Palsy are spastic. The spasticity is sometimes local but more often affects the voluntary muscles of the entire body. Many cases have varying degrees of epileptoid convulsions. The minds of some are affected while others have near normal mentality. There are seldom two cases alike or affected to the same degree. Injury appears to be the most predominant cause of Cerebral Palsy. Many of the cases are associated with skull distortion of one type or another, causing pressure on the brain. Through our research, we have developed new types of treatment for such condition.

CEREBRAL HEMORRHAGE OR STROKES
Paralysis from hemorrhages within the brain, commonly known as strokes, are most frequently associated with high blood pressure, such as hypertension and hardening of the arteries, known as arteriosclerosis.

AMYOTROPHIC LATERAL SCLEROSIS
Amyotrophic Lateral Sclerosis is a rapidly progressive paralysis resulting from involvement of the brain stem located at the base of the skull. There are many causes for this condition, neck injuries among which play an important role. Early symptoms of these conditions are paralysis of the hands and arms. As the disease advances, leg muscles, swallowing and breathing become affected.

POLIOMYELITIS
Paralysis resulting from Poliomyelitis affects the front part of the spinal cord in the spinal type of paralysis and the base of the brain in the cerebral type.
