matter of FACT

Mercury, the smallest planet and the one closest to the sun — 36 million miles — follows an orbit that is less like a circle than the orbit of any other planet. It moves at a speed averaging 30 miles a second, and makes a complete orbit in 88 days, during which time it turns on its axis only once. Because Mercury is so close to the sun, the sun's light makes it difficult to see the planet and to study it.

© Encyclopedia Britannica

Buffalo Roam On NY Farm

OGDEN, N.Y. (UPI)—Mr. and Mrs. James Ryan, owners of Shamrock Farm, assured the passing motorist he wasn't seeing things — there really are buffalo grazing on their land.

The bison, one male and one female, were purchased along with a herd of Holstein cattle by Jerome Miller of Spencerport, who rents part of the Ryan pasture.

Miller said the man who sold them to him said they were three years old and had been given to him by a zoo when the animals were still calves.

Miller said he bought the bison because "they're something different." They were tame, he said, since they had been raised with cows.

Farmer Ryan reported that the other cows on his farm were startled when the bison were first sent into the pasture, but "they get along fine now."
