Learn the art of retouching... Just like photographers can retouch pictures, you can learn to do the same to yourself. There are now pencils available in skin tones to touch up those flaws that need a little covering-up... For instance: Shadows beneath the eyes are brightened by lightly stroking the pencil over the area... This also helps to intensify the eyes, as well as expression lines or cracks disappear when pencil is lightly used and dusted with a little powder. Red blotches, broken veins and other blemishes are blurred when dotted with the pencil and the edges smoothed out...
