

Search Finds Nobel Winner

MONTEREY, Calif. (AP)—"I guess I'll stay off of steep places and avoid climbing for a while," says Dr. Linus Pauling. The controversial Nobel prize-winning chemist was rescued Sunday after 24 cold, thirsty hours on a high, rugged cliff overlooking the Pacific.

He was unharmed, in high spirits, sleepy—and highly respectful of the danger of straying onto shale-slippery cliffs. It's rugged territory where he was stranded, 60 miles south of Monterey.

Dr. Pauling said a search party had passed him by Saturday night—and he decided to stay put in his nearly hidden aerie until today, if necessary. Beyond that, he hadn't planned.

Eastern Oregon—Partly cloudy tonight and Tuesday morning; increasing cloudiness Tuesday afternoon with chance of showers in south portion; continued mild. Highs 42-52; low tonight 28-36.

Western Oregon—Scattered showers and some partial clearing tonight; increasing cloudiness Tuesday with rain likely during the afternoon; continued mild. Highs 50-58; low tonight 40-48. Coastal winds southwesterly, 20-30 m.p.h., tonight, becoming southeasterly Tuesday.

Northern Oregon beaches—Showers and some partial clearing tonight and Tuesday. Temperature range 45-60 degrees.

ON THE BEAM

EYNSFORD, England (UPI)—The congregation at a 600-year-old church here is singing hymns softly to the accompaniment of a muted piano. "We don't dare use the organ," Rev. A. Aubrey told his nervous parishioners. "Our oak beams are riddled with woodworm and any violent shock will bring them crashing down."

Khrushchev Seeks To Buy Time, Men With Easily Reversed Manpower Cut

WASHINGTON (NEA) — Hear these chilling words. They're the private thoughts of some key men in U.S. defense planning after reading Nikita Khrushchev's plan for cutting his armed forces by a third, from 3.6 million to 2.4 million men.

First, Khrushchev needs time and more men—for a nasty surprise.

There is evidence here the Russians are on the verge of some important advances in powerful missiles and in maneuverable military space craft or space platforms. There is evidence, too, that these will take five to six years to put into operation.

This could put the Russians out in front militarily—in the same way the atomic bomb kept the U.S. out in front after World War II. So Khrushchev might be planning a little lull before a new storm five years hence when he might hold the trumps and really threaten.

For to make this potential military might mean something, Khrushchev must build his economy at a faster pace and wipe out some key weaknesses.

But Soviet Russia is sorely short of men for this economic buildup. Beginning with 1960, many of the children who would just now be growing into manhood weren't born because their "fathers" were killed in World War II.

Russian losses from 1941 to 1945 were estimated at 10 million. Russia will feel this shortage of new young men intensely — especially for the next five years. Khrushchev has already had to take many young people out of school to make up in part for this shortage. But he needs more.

Second, militarily, the cuts mean little or nothing.

The Russians can mobilize 3.5 million well-trained reserves and have them in front-line divisions within 30 days. The reserve program is being stepped up. Within three years, Khrushchev will have nine million ready-for-action reserves. Many of the men that will be "released" will go into a new national guard.

Khrushchev is now heaving up

his armies down to the smallest units with new equipment and missiles. The 125 to 130 divisions he will have in 1962 will have far greater firepower than the 175 divisions he has today.

The Soviet Union has been phasing out long-range bombers and surface ships and phasing in long-range submarines and missiles for some time. Fighter planes will be kept—or so it looks. Soviet military doctrine holds atomic subs can do anything surface ships can do and do it better. The Reds never have been very happy with their big bombers, while their missiles have worked out well.

Note, too, that Khrushchev can change his mind at will. His cut from 3.6 million to 2.4 million can be reversed in less than two weeks if he gets his break-throughs more quickly than he expects, or if he sees an opportunity for mischief in the Middle East.

Third, this could give Khrushchev what he wants — partial world disarmament without inspection of Russia.

Premier Khrushchev outmaneuvered the U.S. some time ago on

a cessation of atomic testing. He proposed a ban. The U.S. answered that America would consider no ban without foolproof method of inspection.

So Khrushchev went ahead with a unilateral ban on testing. This forced the U.S. into going along.

Thus Mr. K. got what he wanted—a ban on atomic testing with no system of inspection.

The U.S. has no way of knowing whether the Soviet Union is now conducting secret underground tests or not.

Khrushchev has also proposed disarmament. The U.S. said no unless there is a foolproof method of inspection.

Now Khrushchev is going ahead unilaterally with reducing his armed forces. If the West — for reasons of public opinion—follows suit, Khrushchev will again have what he wants—no inspection.

No one will ever know whether the Russians really have cut their forces—or whether they reduced their men and kept them reduced—or whether they reduced, then built up their forces again in secret.

"DENNIS THE MENACE"

"SURE I CALL 'EM TOYS! I HAVE FUN WITH 'EM!"

Porter Skeds London Trip

WASHINGTON (AP) — Rep. Charles O. Porter (D-Ore) will attend an unofficial conference on disarmament in London Tuesday through Thursday.

He said Sunday before leaving that a group of Labor members of Parliament invited him to the third in a series of round table discussions. Porter called it an unofficial parliamentary level East-West meeting.

The Oregon congressman said Curtis Eaton, board chairman of

the Chesapeake and Ohio Railroad, is paying his expenses.

Porter said, "The only route to peace today is through controlled disarmament. I'm grateful for this opportunity to learn more about the subject first hand."

Ike Terminates Golfing Holiday

PALM SPRINGS, Calif. (UPI) — President Eisenhower wound up his golfing holiday and headed for Washington today reportedly highly pleased by a hopeful forecast of labor-management peace in the steel industry.

The forecast came from David J. McDonald, president of the United Steelworkers Union who had breakfast last Saturday with Eisenhower at the La Quinta home of George E. Allen.

Eisenhower scheduled an early jet takeoff from Palm Springs today, bound first for Denver where he was to pick up Mrs. Eisenhower.

New Aero Dictionary Lists 4,000 A To Z Definitions

WASHINGTON (UPI)—The government has put out a dictionary which says an apron is a parking area and a bag is a fuel tank. A canard in this book is not a hoax but a hind-end foremost airplane.

Dope is stuff you put in gasoline, and an eyelid is a clamshell shutter.

These and some 4,000 other definitions are contained in an "Aeronautical Dictionary" written by Frank D. Adams and published by the National Aeronautics & Space Administration (NASA). It has 199 pages and can be bought for \$1.75 from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

A falling leaf is defined as an aerial stunt, and grass is what you sometimes see on a cathode-ray screen.

A hump is a peak on graph, an impulse is something a jet engine has, and neither jacket nor jumper is an article of clothing.

A jacket may be part of a rocket, and a jumper is a parachutist.

A knot is 6076.1033 feet per second. A letdown is a glide landing by an airplane, a mouse is a pressure-measuring device, and a nose is a nacelle, which is a streamlined structure.

Oleo is not a spread but a kind

of strut. Pants is, or are, wheel fairings. A pip is a blip.

A quadruplane, whatever else it may be, is obsolete. A rich blow-out is not a lavish party but something that shouldn't happen to jet engines.

Screaming is much the same as screeching. Each is "a form of combustion instability."

A touchdown is "an act or instance of touching down." An undershoot is "an act or instance of undershooting."

Vee is a way of writing "V" as in vee engine.

Weathercock is an intransitive verb meaning to head, or tend to head, into the wind.

X is a kind of engine design, and so is Y.

A Zap flap is a flap named after Zap.

The U.S. Constitution does not provide for the nullification of an Act of Congress.
