

Architectural Glass Finds Many Uses In Modern Home

Architectural glass performs the modern miracle of creating new wall space in the home without remodeling — and without sacrificing floor space!

Glas-Wich, a laminated decorative glass, introduces a new dimension in decorating and design in the home by contributing new beauty to the room while serving in a utilitarian role as a sturdy shatterproof "wall."

Virtually a "sandwich" of two sheets of safety glass, with a choice of lovely colors, geometric design or actual inserts of fabric, paper, glittering mineral bits or

botanical specimens enclosed permanently, Glas-Wich is the ideal solution to the problem of limited wall space. It provides added space for placement of important—and large—furniture pieces, or further defies the architect by creating a stunning foyer effect at the doorway. Glas-Wich may be cut to extend that too-short wall or to build an imposing new wall for divider or "compartmentalizing" purposes.

Transparent, translucent, or opaque as desired, Glas-Wich permits the passage of light, adds colorful charm to present lamp

and lighting arrangements. Strong and safe for structural use, it is ideal for even that smallest of rooms, the bathroom, utilizing only about 1-2 inch of floor space in width.

Combining the unusual virtues of architectural value and decorative flexibility, Glas-Wich may be custom planned according to size, color, design or inserts, although a line of six standard designs, handsome geometric figures, is available without special handling. The custom line includes a fabulous collection of natural inserts bonded permanently within the glass to preserve their original texture and color. Winding golden threads, fragile peacock chips, tropical bamboo or cane, delicate butterflies, ferns and bright leaves are literally captured forever in their natural state.

Also in the Glas-Wich custom line are eight basic geometric designs, screened on glass, to afford aristocratic simplicity of line for homes with changeable moods in furnishings. These designs may be screened in any of fifteen colors, or actual inserts of color backgrounds may be "sandwiched" to provide a solid one-color wall. With no color fading or other wall deterioration problems, Glas-Wich maintains a sparkling appearance with the easiest of care — the swish of a cloth!

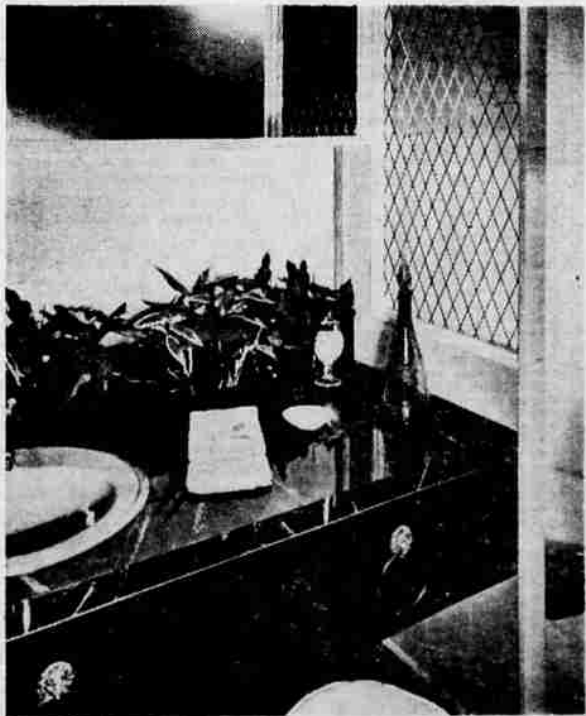

For the homeowner who plans to erect a glass "wall" and wishes to achieve impressive effects with exclusive inserts, it is possible to laminate matching drapery or upholstery, natural fiber fabrics or even wallpaper to create an atmosphere of continuing design in a room. If, in reverse, an area of a room is planned to be partitioned, and thus gain separate identity, Glas-Wich's exclusive laminating process offers a multitude of contrasting "identification" possibilities.

Manufactured by the Dearborn Glass Company, Bedford Park, Illinois, one of the nation's largest glass converters, Glas-Wich is available, standard line or custom, through local glass dealers and may be ordered in any size up

to 48 inches by 96 inches and in thicknesses up to two inches.

THE TOO-SHORT WALL EXTENDS ITSELF through the magic of Glas-Wich architectural glass, the laminated safety glass with permanently bonded design to maintain lasting beauty. Foiling the limited floor plan of the home, permitting flexibility of furniture arrangement, the Glas-Wich wall, "Sphere" design, is custom cut to size, chosen in color and line to harmonize with room furnishings and is framed with piano-matching walnut to achieve a striking effect. — Photo by Kranzten Studio

THE BATHROOM TAKES ON NEW BEAUTY when "compartmentalized" by a Glas-Wich "wall" of "Steeple" design. Effectively creating the illusion of two room areas, the shatterproof architectural glass uses a bare minimum of floor space. A wide range of colors, geometric designs or inserts of actual ferns, flowers, fabrics or paper, gives an endless choice of decorative ideas to harmonize with the current colors of this health-and-beauty center of the home. For homes with the "open door" policy, the bathroom may be planned to offer only a discreet view of the lovely glass wall. — Photo by Kranzten Studio

Amino Triazol Keeps Canada Thistle Down

By HAROLD SCHIEFERSTEIN

One of the most effective chemicals for the control of Canada thistle to be developed in recent years is amino triazole. This is the same material that caused the cranberry controversy last fall.

Applications of amino triazole properly applied and timed have given a high percentage of control throughout the county in recent years.

Best results have been obtained when the thistle has been allowed to make considerable growth before spraying, from budding to full blossom, being about right.

Amino triazole is a soluble powder which is mixed in water at the rate of six to eight pounds of the product per 100 gallons of water.

The addition of a wetting agent makes the material more effective.

Plants should be sprayed to wet. Direct the spray from more than one direction to get complete coverage.

The area should be checked the following year in case a follow-up spraying is required.

SIMIAN STATISTICS

NEW YORK (UPI) — Monkey business is booming. Some 25,000 monkeys pour in monthly from the Philippines and India, at \$40 a head, to meet the need of U.S. drug houses, trade sources note.
