

Engineering Courses Set

OREGON STATE COLLEGE—A fifth "Junior Engineers and Scientists Summer Institute" will be offered this June at Oregon State College as a career orientation for outstanding high school boys interested in science and engineering.

The JESSI program was launched in 1956 at OSC and has now spread across the nation. Eight other institutes will be offered this year in South Carolina, Indiana, New Mexico, California, Washington, Idaho and Utah. Students from 22 states will attend.

This year's June 12 to 25 program at OSC is expected to attract between 200 and 250 selected high school boys from Oregon, western Washington, and Northern California. A similar program for girls will be held at Linfield College.

The two-week program covers all fields of engineering, mathematics, physics, chemistry, zoology, geology, bacteriology, botany and modern languages. OSC professors are instructors and classes are kept small to permit individual training and discussion. Students also visit college research laboratories and observe operation of such specialized scientific instru-

ments as the nuclear, cyclotron, high voltage laboratory and electronic computers.

To qualify, students must have demonstrated high scholarship, have taken at least three courses in high school mathematics and/or science, and be recommended by the high school. Sophomores and juniors are given preference.

Clyde M. Jensen, assistant professor of general engineering, is program director at OSC. Sponsor of the program, in cooperation with the college, is Scientists of Tomorrow, a non-profit Portland corporation formed to promote interest in science. Stanley H. Shirk is executive director.

Some scholarship funds are provided by industries and community professional and service organizations.

matter of FACT

A jellyfish that is fitted like a submarine is the Portuguese man-of-war. From a crested float lines string out whose stinging power can seriously affect any life it touches, even man. The jellyfish can sink at will and resurface within a quarter of an hour.
