

Slides Tell Civil War Story

A HOME-MADE slide projector is used to show the heavy wood-mounted slides. Main lens on the projector is from an old portrait camera.

MORE LIVES were lost in the Civil War than in any other conflict in which the United States has been involved. The toll of generals was even high. The death of a Gen. Lyon of the Confederacy is shown in this death scene. All slides in the collection are in full color.

WESTERN scenes such as this Indian attack are also a part of the antique slide collection.

Chemicals Work Well

Use of chemicals to control weeds on wheat fallow land during winter months is now practical, according to an announcement from the Oregon State College agricultural experiment station.

A chemical called amitrole, applied along with the ester form of 2,4-D, will give excellent control of most winter-growing weeds, reports Dr. W. R. Furtick, weed control scientist at OSC. The new winter fallow program consists of applying two pounds of 50 per cent amitrole and two pounds of 2,4-D ester per acre as a spray.

Use of amitrole on wheat fields has now been approved by the U.S. Department of Agriculture if it's applied eight months before wheat is seeded, Furtick said.

Cost of the chemicals used in the new spray program will average about \$6.50 per acre at present prices, Furtick estimated. Cost of application will have to be added to this.

The chemical winter fallow program will eliminate several of the early spring cultivations now needed to control cheat grass, rye, and other weeds and volunteer grains that spring up rapidly in wheat fields after fall rains, Furtick said. At present, these weeds often form dense mats that are difficult to control.

However, the winter program won't control weeds that grow during the summer months, and several tillage operations will still be needed during this time. Other new chemicals, such as atrazine, may solve the summer weed problem in the future, Furtick observed, but several years of research on residue problems are still needed before permission can be obtained from federal authorities for their use.

The new chemical winter fallow program will make stubble mulch farming practical again in many areas, Furtick noted. Many wheat ranchers have had to abandon the soil-conserving stubble mulch system and resort to plowing in order to control winter weeds.

More information on the chemical winter fallow program, along with specific recommendations for individual problems, can be obtained from county extension agents.

POETRY

DESPAIR

It is the language of the soul
Which mutely cries;
It is the vision sharply drawn
In sightless eyes;
It is the track of captive bird
With cropped wings—which flies;
It is the music of the ear
Which hears but sighs;
It is the laughter framed by
parched lips
'Neath tear-dimmed eyes;
It is the pulsing of the heart
Which, fainting, tries
To rally all its force—
In one last effort, dies.

PAINFUL REMINDER

LOS ANGELES (UPI)—Night-time motorists in Los Angeles get a startling reminder that income tax season is here when they get within vision of the Federal Building in the downtown area.

Lighted windows of the large building spell out in bold letters: "File now."

Wabash, Ind., was the first city in the world to be lighted by electricity.

REMEMBER!

when it comes to a truck, see Bob or Juck—Trucks are their business!
