What is a SPIRAL NEBULA?  
A spiral nebula is a vast group of celestial bodies appearing in the form of a spiral.  
The study of astronomy is essential to acquiring a better understanding of our universe. In the near future we will need many more scientists to probe the secrets of outer space.  
But many potential scientists may never go on to higher learning because there may not be room for them in college. Already many colleges are overcrowded and in 10 years applications will double. We will need more and better college classrooms and scientific apparatus. And we will need thousands more of the highest quality professors.
