

SALEM (UPI) — An increase in water rates proposed by the Oregon Water Corp. for its Oakland service area was suspended by the public utility commissioner.

Commissioner Jonel C. Hill said OWC is asking for an average rate increase of approximately 63 per cent.

Hill said the company stated it needed the increased revenue to offset the cost of new improvements made to the system the past few years.

The PUC said OWC had continued in the suspension. The company has water distribution systems in Klamath Falls and Roseburg as well as Oakland.

Small Schools Accredited, Too

There is no direct relationship between the size of secondary schools and recognized academic status.

Dr. Errett Hummel, professor of education at Portland State College, told the annual meeting of the American Educational Research Association in Chicago this week that studies of 675 high schools in the Northwest revealed that 33 per cent of the accredited schools have enrollments of less than 200 students.

"The evidence indicates that academic recognition of secondary schools in the Pacific North-

west cannot be equated with enrollment," he said.

In Oregon there are 219 secondary schools and 169 are accredited by the Northwest Association of Secondary and Higher Schools, he said. A total of 68 accredited Oregon secondary schools have enrollments of 300 students or less, and have a faculty of from five to 17.

Dr. Hummel pointed out that the findings ran contrary to popular thinking. A large number of small schools are able to secure academic standardization and accreditation.

Another portion of the enrollment study revealed that there is a definite inverse relation in the Western United States between size of student bodies and per capita cost.

Studies of per capita costs in nine Western states revealed that as enrollment increases, per capita costs decrease, he said. In Oregon, per capita costs for schools with enrollments from 1-99 were \$322 as compared with per capita costs of \$323 for schools with 1,000 or more students.

The PSC professor noted that in Washington, Oregon and California the highest costs were always found in schools with less than 100 enrollment. He noted that only in Nevada is the largest enrollment equated with the lowest per capita cost. In other states, lowest costs were found in schools which are medium large for their state, he said.

"There appears to be a trend for costs of secondary education to cluster near some midpoint of enrollment," he said.

The recently completed enrollment studies were based on the 1960-61 school year.

Traffic Crash

Kills Four

SEATTLE (UPI)—Four persons were killed early today in a two-car crash north of here.

The victims were identified as Carol Ann Williams, 21, Virginia Gus, 28, Tony Chinuhut, 17 and Wesley Wood, 27, caretaker at Ingleswood Country Club which is located east of Lake Washington.

Congress Asked To Support Water Research

WASHINGTON (UPI) — President Kennedy's science adviser went to Capitol Hill Wednesday to urge Congress provide money for basic water research in special centers throughout the nation.

Jerome B. Wiesner appeared before the Senate Interior Committee in behalf of a bill written by Sen. Clinton P. Anderson, D-N.M.

"The water resources problems facing the nation are of such scope and complexity as to justify immediate steps to broaden and strengthen research on those problems," Wiesner said. He added there was a "need to enlist and increase combined efforts of scientists, engineers, economists and other scholars for research and graduate education in the several disciplines underlying water resources."

Wiesner said nature blessed the country with an abundance of water. But he added that variations in geographical distribution and rapid population growth and industry expansion "have combined to pose mounting problems of availability of water of adequate quality."

"Consequently, the development of water resources has become one of the largest single activities in the United States," he said. "Water resource development, encompassing all sectors of society, presently involves an expenditure of about \$10 billion every year, and the rate is rapidly increasing."

But too small a fraction of this yearly investment is devoted to research, Wiesner said. Research needs ranged from basic research on the nature of water to studies in the social sciences with respect to management of water resources.

Wiesner said the bill would authorize \$5 million annually in matching funds for the produced shortly after Congress states to use in water research, convened, anticipated recommendations in a special water mes-

develop and mobilize the scientific up to \$100,000 for each state to in-aid to universities, colleges and sage the President sent to Capitol Hill Monday.

research institutions, federal and it also would authorize \$5 million annually in matching funds for the produced shortly after Congress states to use in water research, convened, anticipated recommendations in a special water mes-

develop and mobilize the scientific up to \$100,000 for each state to in-aid to universities, colleges and sage the President sent to Capitol Hill Monday.
