# Low From 3 Good Leader

By OSWALD JACOBY  
Newspaper Enterprise Assn.

The most important change in contract play in the last 15 years has been the emergence of the lead of low from three small as standard expert procedure, rather than the book lead from the top.

A few experts started to do this right after World War II. As the years went by more and more joined the fold until today only a few die-hard stick to the book procedure. Furthermore, the records seem to show that those die-hards aren't really experts any more since their names never appear among tournament winners.

It seems that it is about time for the public to take up and use this improvement in playing tactics. I have used it in my table of leads in "Win at Bridge with Oswald Jacoby" and have made it standard in the Jacoby system. Of course, I have been using it for many years in my own play.

Now take a look at the North and South hands and the bidding. West opens the device of spades. East takes his ace and returns the six. If your opponent had led the top of three small, you would play the king of spades. You are reasonably sure that if East held seven spades he would have bid a second time over North's two clubs, so that West is marked with the queen of spades for his opening lead. So you play the king and West's queen blocks the suit.

But you suppose that West did not hold the queen, but opened low from three small. You must finesse the jack because the odds are that East holds the queen. West takes his queen, returns the suit and down you go.

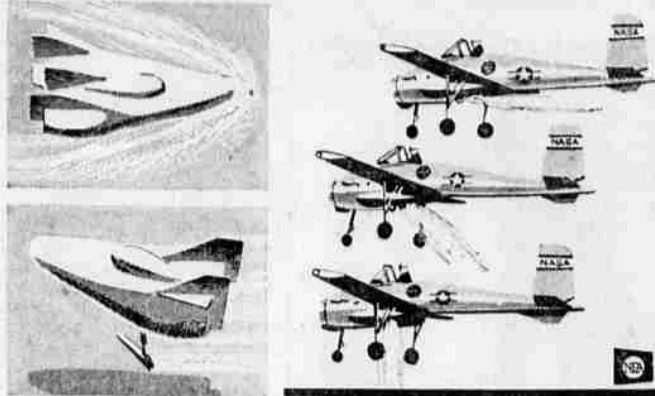

# ♥♦CARD Sense♦♠

Q—The bidding has been:  
South West North East  
1. ♠ Pass 1. ♠ Pass  
2. N.T. Pass 3. ♠ Pass  
3. ♠ Pass 4. ♠ Pass

You, South, hold:

# THE WIZARDS OF SPACE (9)

By Don Oakley and John Lane

As it has done since it was founded in 1940 by National Advisory Committee for Aeronautics, Ames Research Center at Moffett Field, Calif., is carrying on much of the nation's basic research in aeronautics—and, since Sputnik, in space flight as a member of National Aeronautics and Space Administration.

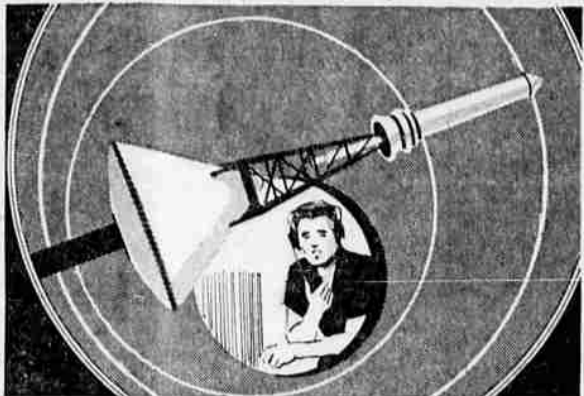

Work at Ames covers a broad range, including: • Problems of atmospheric re-entry. • Space environment simulators. • Guidance, control and navigation of spacecraft. • Biological hazards of space.

In the last field, Ames has called upon industry to help study a program to launch a series of "biosatellites." Cargoes of animals and plants would be recovered after orbital flights

of 3 to 30 days to determine the effects of weightlessness on the biological rhythms and cellular processes of living organisms.

In another project, "meteoroids" have been shot against a simulated lunar surface to study the possible spray hazard to astronauts walking on the moon.

One Ames project will soon be tested in full-scale flight. This is a wingless, piloted spacecraft (first panel) called the M-2 "lifting body" that could be maneuvered more than 1,000 miles to a landing point after a space mission and land horizontally like an airplane. The first piloted tests will take place this year at NASA's Flight Research Center, Edwards, Calif. Aeronautics is still very important at Ames.

Among other things, designs for supersonic commercial transports are being developed. The Bell X-14A (center panel), a highly successful VTOL (vertical take-off and landing) jet, is making valuable contributions not only to aeronautical but to space research. The X-14A is being used to simulate landing phases of a mission to the moon.

Like all of NASA's centers, Ames is contributing to the Apollo moon program. In third panel, an engineer tests an Apollo capsule and attached escape tower mounted in one of the center's wind tunnels. The tower will ride with the Apollo through the lower, denser part of the atmosphere, then be discarded.

# Five Per Cent Salary Increase For 12,000 State Employees Gets Commission Approval

SALEM (UPI)—A five per cent pay increase totaling \$6.7 million for about 12,000 classified state employees has been approved by the State Civil Service Commission.

The commission's recommendations go to the governor for approval, then will be submitted to the State Emergency Board on June 28.

The Emergency Board, made up of legislators, must approve all

English copyright laws require that one copy of every book published in the country be given to the Bodleian Library of Oxford University.

of the funds for the pay hikes.

Civil Service Commission Director Melvin H. Cleveland said about two-thirds of the state's classified employees will receive a five per cent pay hike.

About one-third of the classified employees will get an increase in pay, and a larger increase than originally planned because of recent increases in the private pay scale for nurses, Cleveland said.

The pay increases will go into effect July 1 if approved by the Emergency Board.

The commission's recommendations were approved in principle by the 1965 legislature, which set

aside \$4.2 million with the Emergency Board for this purpose.

The increases, approved by the Commission Wednesday, will take \$3.8 million from the general fund, and about \$2.9 million from dedicated funds.

Education Separate  
Ralph Minear of the Department of Finance and Administration, said the commission's action, combined with increases approved by the legislature, will provide more pay for all state employees except higher education

personnel, and the one-third of the classified people.

The legislature appropriated separate funds for higher education academic salary increases.

State policemen and heads of state agencies also are slated to

receive bigger pay checks next month.

# ACE TV TIPS

• A quiet but deadly advertising program is being instituted by some larger Manufacturers of PRINTED CIRCUIT type TV sets. They have two objectives, to foster lagging public acceptance of their product, and, to degrade and destroy the superior concept of handwired and handcrafted TV chassis.

• These manufacturers detest the phrase "PRINTED CIRCUIT." The public generally knows what that is, and that's not good. (For the Manufacturers) Therefore they love to hide behind superlatives such as "Sealed Circuitry," "Precision Etched Circuitry," "Space Age Circuitry" and Ad Infinitum. But, a goat by any name SMELLS the same.

• We have said it before, and we stand on it again: At the present time there is only ONE reason for the use of the Printed Circuit in TV sets — IT IS CHEAP TO STAMP OUT! And, it's a shame it hasn't been.

• During World War II Zenith pioneered in the development and use of the Printed Circuit. When used with lightweight transistors and low voltage and low heat components, they work fine, such as in missile components, hearing aids and transistor radios.

• We can't help but wonder, if handwiring is so outdated, why do these Printed Circuit TV manufacturers still use handwiring to connect the printed circuit boards to the rest of the TV components? Want to know? They haven't found a cheaper way to do it.

• ZENITH has been checkmated a BEST BUY in the leading consumers magazine for the past five years. NO OTHER manufacturer can claim that record. Go to the City Library and look it up.

• Similar to above is our new 1964 Model L 2005 19" Zenith portable. At ACE TV this \$159.95 set ALWAYS sells for only \$159.95. With each set ACE TV gives a 3 month unconditional service warranty policy, which includes Labor, Parts AND Service Calls.

• We have all NEW 1964 models, come in, let us show you why Zenith sells over one million TV sets each year. Yes, it's true, Zenith is number ONE in TV sales throughout the United States.

And for the finest in TV, Radio Service it's...

# Recreation Events Start June 24

MOUNT SHASTA — Jack Salo, Mount Shasta recreation director, has announced the summer program will begin June 24 and extend through Aug. 16. A schedule of bus transportation, available for most functions, will be announced this week, as well as a complete day to day schedule of activities.

Mrs. Virginia Alkin will teach arts and crafts from 9 a.m. to 12 noon daily. Charles Birimis will act as playground supervisor and Dan Aquila will be the lodge and pavilion supervisor. Dixie Bullerwell will be in charge of the tiny tot group, and her duties will include playground activities, a story hour, and treasurer hunts. Charles Rosecrantz will be director in charge during the absence of Salo, who is attending summer school in Denver.

From July 22 to Aug. 2, the regular recreation program at the park will be interrupted for swimming lessons at the Dunsuir pool. Registration forms are available at the elementary school and high school. They should be

completed and returned immediately in order to finish class organization. Bill Sowe and Rosecrantz will head the swimming school.

The Hi-Teens and Junior Dudes and Daisies groups have plans for a busy summer schedule as well.

Load up,

light out

and get lost...

**Chevy II Wagons**—The heart of a suitcase. The rattle of a road map. There's something about one of these spruce, surprisingly spacious wagons that can turn even the routine preparations into a happy part of your trip.

Take that old bugaboo of packing, for instance. No bother. With the kind of room you get in that easy-loading cargo compartment, you can just about toss things in any old whichway and come out with space to spare. The load won't dampen the spirits of the spunky 6-cylinder engine either. It just hums along chugging up gas pumps (there's also a choice of an even thrifter 4 in most

AT YOUR CHEVROLET DEALER'S

models) like it didn't have a care in the world. Fact is, it has far fewer cares than most engines—being built with the special knack Chevrolet engineers have for dependability and ease of maintenance.

Like a car with ginger—without a lot of needless gingerbread? Your dealer's got a full line of Chevy II's to pick from. Why not drop down and check now while both the trading and the traveling are especially good? And maybe it'd be a good idea to leave a note for the milkman on the way out, just in case you happen to get lost some place before you get back.
