

FIRE POWER — There are 887 armor-piercing 20mm cannon shells visible in this picture, hardly more than one-third the complete load for the three pods (under Navy A-4 jet) of the HIPEG gun system (High Performance External Gun) developed by Hughes Tool Company's Aircraft Division in Culver City, Calif., for the Bureau of Naval Weapons. The system which fires at the rate of 12,600 rounds per minute on pinpoint targets, would fire the shells pictured in about four seconds. Hughes scientists said a one-second burst delivers upon a tank target the destruction equivalent of a 4,000-pound object dropped from 1,000 feet. —UPI Telephoto

POLLY'S POINTERS Economy Lesson

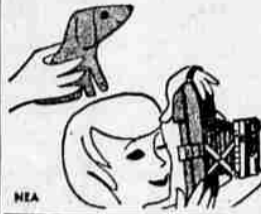

POLLY CRAMER
Newspaper Enterprise Assn.

DEAR POLLY—Our daughter's wedding had to be arranged on a very strict budget. For her album of wedding pictures, I covered a cloth-covered notebook with leftover pieces of her brocade wedding dress. First a layer of old cotton flannel sheeting was put around the outside cover for padding. Pieces of the brocade were cut so they lapped generously over the outside to the inside and held in place with that popular, all-purpose, milky looking glue that dries clear. As a finish, cardboard pieces, also covered with the dress fabric, were fitted to the inside of the covers and it concealed the raw edges that lapped over from the outside. We bought the usual acetate jacket cover for protection. Filler sheets were bought at an office supply store and the total cost was \$3 in comparison to ones we saw that started at \$12. Old leather and suede jackets also make luxurious looking scrapbook covers. Rubber cement should be used to hold these instead of the glue.—MRS. F. M. K.

it is a saving. Fasten the towel at each corner with a thumb tack to keep it in place.—MRS. R. S. T.

GIRLS—This would be a good use for those bath towels that are wearing thin in spots. Cut them into the right sizes with the pinking shears.—POLLY

Demo Calls Republicans Hypocrites

WASHINGTON (UPI) — Rep. Compton I. White Jr., D-Idaho, Friday branded Republican members of the House Agriculture Committee "hypocrites" for opposing the creation of an assistant secretary of agriculture for forestry.

White charged the 14 Republicans with "doubletalk" in expressing concern for the problems of the lumber industry while opposing a bill introduced by committee chairman Harold D. Cooley, D-N.C., to create the new post. The committee cleared the bill for action by the House on a straight party line vote. The solid Republican minority included one member from the Pacific Northwest, Rep. Catherine May of Washington.

Mrs. May said the committee rejected two amendments designed to make sure the proposed new secretary's duties would involve only forestry.

REHEARSALS FOR "BLITHE SPIRIT" — The cast of the Klamath Civic Theatre's forthcoming production, "Blithe Spirit," takes note of the script before staging its first rehearsal earlier last week at the Willard Hotel. Left to right (back row) are Sylvia Smith, Joe Broda, Tom Mann and Bill Hagerman, director. Front row, same order, are Shirley Smith, Laurie Wooschlager and Mary Cumpston. Judy Stearn is absent. The production is to be staged in November.

4 Historic Old Ships 'Live Again'

SAN FRANCISCO (UPI) — Four historic ships, once just rotting hulks, had the feel of happy feet on their decks again Saturday.

Smiling children ran up the gangplanks of the sailing schooner Thayer, the steam schooner Wapama, the sidewheel ferry boat Eureka and the hayscow Alma, all vessels that helped make San Francisco the Queen Port of the West at the turn of the century.

They are the first contingent to the San Francisco Maritime State Historical Monument, which was opened to the public Saturday.

When completed, the project will consist of a four acre Victorian Plaza, the ships, and a brick warehouse housing 38 pieces of pioneering railroad rolling stock.

An Old Route
Many of Saturday's visitors took the Hyde Street cable car to the gas-lighted plaza and walked past the pre-1906 quake warehouse to the ships...much the same route taken by sailors of London's "Sea Wolf."

The State Division of Beaches and Parks estimated that about two million persons a year will visit the monument, dedicated Wednesday by Gov. Edmund G. Brown.

The project was conceived in 1948 by the San Francisco Maritime Museum Association director Karl Kortum and financed by impounded tidelands oil revenues returned by court order to California from the federal government.

The Maritime Association shepherded the project through the state legislature and acted as consultant to the State Division of Beaches and Parks on refurbishing the old vessels.

The association will add its well-boarded tourist attraction, the sailing ship Balclutha, to the fleet.

Lumber and Ammunition
The Thayer was one of about 120 three-masted schooners in the Pacific Coast lumber trade at the turn of the century. The 63-year-old vessel carried lumber to Australia in World War I and served as an ammunition barge in World War II.

After hauling a record codfish catch of three million pounds in the Pacific Northwest in 1930, she almost came to an inglorious end. She was tied up in Poulsbo, Wash., as a "pirate ship," which she never was.

The Wapama, once famous for its speed in loading lumber from steep cliffs on the California coast, had to be rescued from a Seattle, Wash., junk dealer who started to strip the fittings from her. The 48-year-old lumber vessel was towed to San Francisco.

The Eureka, built across the bay in Tiburon in 1890 as the Ukiah once laid claim to the title of "fastest double-ended ferry boat in the world." She reputedly could do 18 knots.

THE DOCTOR SAYS Blood Type Plays Factor

By W. G. BRANDSTADT, M.D.
Newspaper Enterprise Assn.

One of the greatest hazards to the newborn is a result of Rh incompatibility. If your blood is Rh-positive you are one of the 85 per cent with this type of blood. The rest have Rh-negative blood.

This grouping has nothing to do with the A-B-O groups which must be determined before a transfusion is given. Rh-negative mothers who are married to men who are Rh-positive may give birth to babies who have erythroblastosis, a blood-destroying disease that caused many deaths before the cause was discovered.

A woman with Rh-negative blood may become sensitized to Rh-positive blood through having had a transfusion with Rh-positive blood or through carrying a baby whose blood is Rh-positive like the father's.

A woman who becomes sensitized during pregnancy but who has not had a baby with erythroblastosis has a good chance of having a baby that is normal. Or it may have a blood disease, which is mild and can be easily controlled with a few small transfusions of Rh-negative blood.

But once the mother is sensitized, the danger to the infant becomes greater with each succeeding pregnancy.

The erythroblastic baby may appear to be normal at birth, but becomes jaundiced within a few hours. The jaundice increases rapidly and may obscure the pal-

lor that would go with the infant's anemia.

This anemia is due to the fact that the sensitized mother has developed antibodies that destroy the baby's Rh-positive blood cells. These antibodies are transferred to the baby through the placenta and umbilical cord.

In severe cases the baby can be saved if the possibility of the disease is recognized in advance and arrangements are made to give the baby an exchange transfusion.

This is a massive transfusion that replaces all of the baby's Rh-positive blood with blood from an Rh-negative donor of the same A-B-O group. Since the mother's antibodies are destructive only to Rh-positive cells, the transfused Rh-negative blood is not affected and the baby survives.

When an Rh incompatibility is suspected, another procedure is also used to improve the baby's chances. Oddly enough, this is the induction of labor 14 to 28 days ahead of the expected day of delivery. This is because the transfer of destructive antibodies to the infant's blood occurs at an ever-accelerating rate in the last weeks of pregnancy.

Although, as pointed out in a previous column, the development of the baby in the uterus to full term has many advantages, this is one instance in which early induction of labor is the lesser of two evils.

Town Plans To Observe Fire Week

DUNSMUIR—A fire equipment parade, open house at the fire department, town inspection for fire safety, and poster award dinner will mark Fire Prevention Week in Dunsmuir. Gary Girdler, chairman of the observance, has announced.

Inspection forms have been given to all Dunsmuir businessmen to help them correct fire hazards before the outside teams of experts evaluate the town on Oct. 9, Girdler said.

Fire-fighting equipment will parade through downtown Dunsmuir on Tuesday evening, with mutual aid vehicles from the U.S. Forest Service, Mount Shasta, and Castella participating.

Immediately following the 7 p.m. parade, the Dunsmuir volunteer fire department will hold an open house in the Dunsmuir Fire Hall where the use of various pieces of equipment will be demonstrated.

A fire prevention poster contest in which school children are participating will be judged Wednesday, and cash prizes for winners will be announced at the awards dinner at the fire hall on Wednesday night.

Fire prevention movies are being shown this week in the schools and to adult groups.

A light texture in biscuits depends on the proportion of liquid to flour. The correct ratio of liquid to flour gives a soft, easy to handle dough. Add the flour slowly to find the amount needed for the type you're using.
