

MOUNT MAZAMA ERUPTION — This artist's sketch catches part of the cataclysmic eruption that resulted in the creation of Crater Lake. Eruption of Mount Mazama was classed as the crowning event in the volcanic history of the Cascade Range.

UPHOLDS LAW

DALLAS (UPI)—Deputy Constable D. W. Smith upholds

British justice—even if he is a Texan. Smith served a summons this week on a Dallas woman is-

sued by the High Court of Justice, Queen's Bench Division, London, England.

The unidentified woman is accused with walking out of a London inn without paying the tab of 270 pounds (\$756.)

Diller, Patton Write Park Description

Editor's Note: Following is a portion of the report published by the federal government in 1902 describing the topography and petrography of Crater Lake. It was written by Joseph Silas Diller and Horace Bushnell Patton.

"Twenty years ago Crater Lake was unknown to the general public, but since then a knowledge of its remarkable features has been spread abroad through the press, and Congress recognized its worth as an educational feature and made it a national park by the act approved May 22, 1902.

"As defined by the bill the park is bounded north by the parallel 43 degrees 48 minutes north latitude, south by 42 degrees 48 minutes north latitude, east by the meridian 122 degrees west longitude, and west by the meridian 122 degrees sixteen minutes west longitude, having an area of 249 square miles."

"A great impetus to the spread of information concerning Crater Lake was given by the Mazamas of Portland, Ore., who held a meeting at the lake in August, 1896, which attracted many visitors. The principal features in the history of the lake had previously been made out, and the Mazamas, recognizing the fact that the great peak which was nearly destroyed in preparing the pit for the lake had no name, gave it the name of their own society. Upon the rim of the lake are a number of small peaks, each having its own designation.

"The term Mt. Mazama refers to the whole rim encircling the lake. It is but a mere remnant of the once lofty peak, the real Mt. Mazama, which rose far into the region of eternal snow. To get a basis for reconstructing the original Mt. Mazama it is necessary to study in detail the structure and composition of its foundation, now so attractively displayed in the encircling cliffs of Crater Lake.

"The wrecking of Mt. Mazama was the crowning event in the volcanic history of the Cascade Range, and resulted from a movement similar to that just noted in Mt. Thielson but vastly greater in its size and consequences. This volcanic action culminated in the development of a great pit or caldera, which for grandeur and beauty rivals anything of its kind in the world.

"The rim encircling Crater Lake, when seen from a distance from any side, appears as a broad cluster of gently sloping peaks rising about 1,000 feet above the general crest of the range on which they stand. A good view is obtained from the road along Anna Creek, where the southern portion of the rim appears as shown on Pl. III, B. Here Cascade and Vidua Peak are the most prominent features.
