OFFICIAL PAPER OF THE CITY OF KLAMATH FALLS

"Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it"—Abraham Lincoln

DOES ECONOMY HURT BUSINESS?

The president of the Rotary club at Washington, discussing business conditions, asserted that "if everybody stops spending money the time will soon come when nobody will have any money to spend."

This was really a criticism of President Coolidge's advocacy of rigid personal economy, and but expresses the growing resentment that prevails among many business men who say that this policy is hurting business.

Whether this be true or not the fact remains that savings bank deposits are steadily growing. Of course, these funds eventually find their way to stock and bond markets and make possible the big capital flotations. Money may be diverted from one channel to another but it is never idle.

Most people rejoice in the idea of economy in governmental matters, and will support the president in his efforts to hold them down. The same business principles should apply with equal force to every other business, public or private. One can't have his cake and eat it, too.

ALCOHOL FROM GAS

With a few familiar elements such as carbon, oxygen, hydrogen and nitrogen, in varying proportions, chemists make up about a thousand dyes and hundreds of flavors and savors as well as a multitude of other articles used in medicine and arts. Quite recently special attention has been called to the synthetic production of methanol, or wood alcohol by German chemists, produced from monoxide gas. It is claimed that a pure methanol alcohol, but deadly poison, can be produced and sold at about 20 cents per gallon, and large shipments to this country at these prices will inevitably put an end to the wood alcohol business. The matter has already been brought to the attention of our tariff board, but as it is a raw material used in manufacturing, it cannot be prohibited by a tariff.

RUSSIA'S HUNTING CO-OPERATIVES

The co-operative movement in Russia which involves more than 80,000,000 of the people, has extended to those who exist by hunting. The fur business of Russia last year amounted to 52,000,000 rubles, besides furnishing food, clothing and a livelihood for nine millions of people. The hunting co-operative have enrolled 230,000 hunting families in 70 corporate bodies or unions. An all-Russian professional hunting co-operative union was formed for the purpose of directing the work and the program includes besides many protective measures, the establishment of preserves and farms for the raising of valuable fur-bearing animals, as nearly half of the Russian fur exports come to the United States we are particularly interested in this Russian industry.

KNITTED SUITS

For the latest fashions in men's suiting Beau Brummels are learning to look to London rather than to Paris. The latest vogue calls for "knitted plus fours and jazz sweaters." Neither London fogs nor Scottish mists cause such suits to shrink. The inventor went to Switzerland and, rolling in the Alpine snow, proved to the world that the knitting needle is mightier than the loom. So now he is rolling in wealth.

There may be critics of the Pacific fogs, but the bootleggers are not among them. It takes a rather dense fog to make a market for the stuff they are putting over.

There are more talkers than thinkers in the world. This is doubtless the reason why it takes so much gossip to go 'round.

A Bird That Lays No Golden Eggs!

HEART AND HOME PROBLEMS

Children always are the innocent victims in such tangles as this:

Dear Mrs. Thompson: I am a grass widower with one son eleven years of age, of whom the courts gave me custody when I divorced my wife four years ago. Since that time my son and I have knocked around. Finally my mother wanted us with her. But it was only for what she could get out of me. I have found out that she forced the locks on my trunk to look over my deeds, and insurance policies, and most of all, for my bank book. She has found out all I have and is mad because she can't get it. She denies looking, but my sister told me everything, dates, facts, figures. My mother always cussed up to my son about the immoral mother he has had, and the child hears gossip and scandal. My divorced wife wants to raise him for me but she is married. My son does not want to go to her without me, as it was he who first told me of his mother's wrongdoing. Do you think I would have trouble in claiming him from his mother if I pay his board? If I marry later on I would have a place for him.

J. A.

It certainly is not wise to raise a child in such a turmoil of petty family bickering. You are quite right to wish to put your son in a different environment. Since the court has awarded you the custody of your son, I do not think you would have trouble in claiming him. You might get legal advice before letting him go to his mother. There are a number of good boarding schools where it would be better to put him than to allow him to be mixed in such broiling.

ADVICE TO ALMA

Dear Mrs. Thompson: A girl (she refers to "Alma") who writes that she loves another woman's husband, who is the father of children, doesn't know what the word love means. She is so selfish that she doesn't know what happiness is like. Aside from the sin of coveting another woman's husband, she is a disgrace to our sex. Instead of leaving town she had better repent her folly and make herself right with God and seek earnestly and humbly to get a proper outlook on life. If she does all this she no doubt will find happiness with a man who is not the husband of another woman, but never break up a home.

MRS. C. E. J.

GRANDMOTHER: It is contrary to the policy of this column to reveal the names or addresses of cor-

respondents. Long experience has proven this rule necessary.

HOUSEKEEPER: Consult your druggist. There are a number of standard remedies for lice. However, plenty of soap and water usually is effective.

BLUE EYES: You are too young to marry any girl. Girls should not kiss boys or be kissed by them unless they are engaged.

LONELY JUNE: Fifteen is much too young to be engaged or married or even to "go with" boys, but it is such a glorious age that you can be very generous with your quarrelsome grandmother, who will never be fifteen again.

BLACK BEAUTY: It may be your fault as much as his. I would try to believe that in your case. It would be better to make advances. Maybe you can get him out of the habit of these ugly moods.

POLLY: I am afraid you do not love either man enough to marry him. You shouldn't marry for at least two years, anyway.

DUMB DORAS: Having been married and divorced at sixteen, you have already achieved enough notoriety without "walking the streets" in search of companions. Turn your thoughts to other matters and you will be less lonely.

J: When using a double ring ceremony, the bride buys the man's ring. Wedding invitations are sent out about a month before the date set for the wedding.

THE BEST OF ADVICE

BY CLARK KINNAIRD

The good gentlemen who are busy preaching the supremacy of the Nordics, should mull over this a bit:

"The difference between one nation and another, whether in intellect, commerce, art, morals, or general temperament, ultimately depends, not on any mysterious properties of race, nationality, or other unknown and unintelligible abstractions, but simply and solely upon the physical circumstances to which they are exposed."

Grant Allen, who made the observation some years ago, reasoned that if it is a fact, as we know it to be, that the French nation differs recognizably from the Chinese, and the people of Hamburg differ recognizably from the people of Timbuctoo, then the notorious and conspicuous differences between them are wholly due to the geographical position of the various races.

In other words, if the people who went to Hamburg had gone to Timbuctoo, they would now be indistinguishable from the semi-barbarian negroes who in habit than African metropolis; and if the people who went to Timbuctoo had gone to Hamburg, they would now be blonde merchants, busy preparing imitation whiskies and wines for the American bootleg trade.

"The differentiating agency must be sought in the great permanent geographical features of land and sea," Allen argued. "These have necessarily and inevitably moulded the characters and histories of every nation upon the earth."

"We cannot regard any nation as an active agent in differentiating itself. Only the surrounding circumstances have any effect in such a direction. To suppose otherwise is to suppose that the mind of man is exempt from the universal law of causation."

"There is no caprice, no spontaneous impulse, in human endeavors. Even tastes and inclinations must themselves be the result of surrounding causes."

However, this view is open to attack. Naturalists know well enough how indeterminate the harmonies between a fauna and its environment are. An animal may better his chances of existence in either of many ways—growing aquatic, arboreal, or subterranean; small and swift, or massive and bulky; spiny, horny, slimy, or venomous; more timid or more pugnacious; more cunning or more fertile of offspring; more gregarious or more solitary; or in other ways besides—and any one of these ways may suit him to many widely different environments.

HOUSEHOLD HINTS

MENU HINT
Breakfast
Fresh Diced Pineapple in Confectioner's Sugar
Wheat Cereal Cooked with Dates
Omelet Toast

Luncheon
Cheese Souffle Buttered Beans
Strawberry Short Cake
Cream Tea

Dinner
Individual Lamb Steaks
Boiled Potatoes
Lettuce Salad Oatmeal Bread
Rhubarb Pie Coffee or Tea

TODAY'S RECIPES

Cheese Souffle—Make a cream sauce with one tablespoon of butter, one tablespoon of flour and one and one-half cups of milk. Add four tablespoons of grated cheese, stir until cheese is melted, then fold in yolks and whites of two eggs beaten separately. Pour into well buttered pan and sprinkle top with bread crumbs. Set dish into a pan of water. Bake for twenty minutes, fifteen with cover on, five with it off.

Individual Lamb Steaks—This is a method of finishing leftover roast lamb. Cut six slices of lamb of the desired thickness. Sprinkle well with salt. Roll in bread crumbs, then dip in a mixture of one beaten egg and two tablespoons of milk, then in crumbs again. Place meat in hot bacon fat—about one-half cup—and brown on both sides. Have ready six slices of hot dry toast a trifle larger than the steaks. Put the meat on the toast rounds, garnish with a radish rose and serve. Chopped mushrooms may be sautéed with the meat. A good gravy is made by adding half a cup of can-

nant farmer of the past would stalk into the general store, look around him with a hungry gleam in his eye, and mutter hoarsely:

"Gimme an egg's worth of sugar—an' ye might weigh out an egg's worth of coffee, too. The Plymouth Rock's a-duckin'."

The champion absent-minded man lives at Belham, says an English paper. One day last week he called upon his old friend, the family physician.

After a chat of a couple of hours the doctor saw him to the door and bade him good night, saying: "Come again. Family all well, I suppose?"

"Good heavens!" exclaimed the absent-minded one. "That reminds me of my errand. My wife's in a fit."

"What makes you look so fatigued?" was asked of an undersized local resident the other day. "Well, it's like this," he replied. "My wife is walking to reduce, and the only time she can do it without attracting the attention of the neighbors is in the evening. She then insists that I go along, even if I am tired. The past two weeks I have lost eight pounds and she has gained two ounces."

Bobbie had never seen a live sheep, but one of his most treasured toys was a little woolly lamb on wheels, which he drew all about the house and yard. Last summer he went to visit his uncle, who owns a sheep ranch in the west. When Bobbie spied a flock he exclaimed: "You must have got them cheap, uncle, 'cause they've all lost their wheels."

Peyton Gets A New Truck With 9 Speeds
If you happen to notice Oscar Peyton stepping around like a blind dog in a meat house don't make the mistake that it is pride in the new moultache he is wearing just under his nose. That isn't it at all. He's just tickled to death over the new G. M. C. truck that Rex Renner has brought him from Portland, and you can't blame him so very much. The new machine is the newest of new things in trucks, and has all the latest doodads calculated to make it a thing of beauty and a joy forever. New dual tires is one of the features that stick out like a sore thumb. The rear wheels are to all intents and purposes, so far as the rubber goes, four wheels, carrying two tires on each axle, while the front wheels are just common old wheels with only one tire each. But at that it foots up to six tires to go all around, and all are interchangeable. Another feature of the

and tomatoes to the meat has been removed with curry or Worcestershire.

Oatmeal Bread—Two cups of oatmeal, one cup boiling water, one cup molasses, one-quarter cup baking soda, one tablespoon salt, one yeast cake, one egg, two quarts water, night mix together in a bowl and stir into the oatmeal. Remove from flame and stir until lukewarm. Stir in a little warm water and sifted with the salt and mixture has to be kneaded in all the flour. Cover cloth and set in a warm place to rise. In the morning, divide in two parts, put in well oiled pans, again for one and a half, then bake for forty-five minutes. A moderate oven.

Rhubarb Pie—Crush the amount of 2 cups of pie) and one cup water, beaten one tablespoon of few drops of lemon oil, a lined pie tin and on top crust. Bake about 30 minutes.

SUGGESTIONS

Strawberry Caprice—Consists in arranging slices of crushed strawberries in a bowl, so that the two colors of the depth of the plate, a swirl of whipped cream, berry. Vanilla ice cream or blanc mange also advantage with the crushed fruit. This makes some dessert for a party, and is also popular for parties, wedding recep-

new truck is its size and shape. Any man of trouble with Profound when we have only one content with. But the company will have to its own in order to its drivers when they to play with those who truck is a combination utility, a special study made to overcome the developed in trucks before. The body is strengthened until with 2 1/2 ton truck will carry twice that without

FERRY BOAT
EUREKA, CALIF., May 26.—The power boat which ferry automobiles on Klamath river at Eureka, reported to the United States of customs here
