

**Press Chief  
Dined in Brazil**

DE JANEIRO, Brazil, (United Press)—Foreign Press, of Brazil, today dined with the United States Press, who is visiting Brazil, and James I. Smith, American general manager of the United Press.

The keenest interest in the United States and in the news, being particularly in close interchange between the United States which he said is highly maintaining relations between governments and peoples.

**OVERLAND  
IN NEW CARS**

major activities of the car manufacturers and the production of cars at low price and with the buying public looking to the results of the Willys-Overland is the big popular note—size, five passenger seat—below \$600 at the announcement of this Overland produce, the activities of manufacturers have been thick and fast.

fields of manufacture suddenly developed: cars, with either six or four, so designed that the room and convenience and the larger priced that it meets the requirements of the 2- and more buyers each year to be served within the \$600 price mark.

**Hopes to Give U. S. Good Wetting**

Representative John Philip Hill of Maryland, is seeking support among congressmen for the bill he will introduce in the house in December providing for repeal of the eighteenth amendment. "The law has been tested and proved a failure," he avers. "The time has come when for the sake of the constitution, if nothing else, it must be repealed."

It is this latter field which will serve the huge buying field of light car owners.

Profitable production requires huge outputs in low priced cars. It is stated that on the standard sedan model alone, Willys must build not less than 10,000 cars a month to maintain the price set on this car, and it is but one of the four models which will be built on this chassis alone.

Molybdenum steel is used in the axle shafts and steering connections, chrome vanadium steel is used in the springs, full equipment, including speedometer and other essential accessories are included at the price and the body dimensions are those usually found on cars in the so-called "light six" field.

In the general construction of the car, there are no departures from the type of design which is used in the more expensive products, so that the buyer is getting what is commonly accepted as quality car design, finish, material and equipment.

**TRADE CHARACTER  
NOW WELL KNOWN**

Probably no trade character is better known to automobile owners of the west than "Saving Sam," the little "Western Auto trade character used to symbolize the company's policy. His smiling countenance beams forth from the newspaper sheets, magazine pages, billboards—in fact, every medium used by the company to advertise. "Saving Sam" made his debut in 1918. The idea was George Pepperdine's, and it was sketched by a Los Angeles artist. "Saving Sam" is considered valuable adjunct to the company's intensive advertising, because of the cheerful expression on his face, which reflects the experience of the thousands of customers of the big company. With one hand outstretched to render service, the other in his pocket, suggesting savings, and with his broad smile he ever stands portraying the policy of the company—"Saving and Service With a Smile."

United States Department of Agriculture, Bureau of Biological Survey, Time of Sunrise and Sunset at LaMeview, Oregon, (129th Meridian Line).

Table showing time of one-half hour before sunrise and sunset, for the purpose of indicating when, each day during lawful open season, the hunting of migratory game birds may begin, or must cease, respectively, to abide by the requirements of the Federal Migratory Bird treaty act regulations.

Add five minutes to sunrise and sunset for the region around Klamath Falls.

Column headed "Start A. M." gives the time when shooting may start, as the half hour has been subtracted from the time of sunrise.

Column headed "Stop P. M." gives the time of sunset, when shooting shall cease.

**"At \$595, this Overland Sedan has revolutionized quality standards in low priced cars"**

... this is the opinion of one of the leading motorists of the country, after a careful examination of what this wonderful car really offers.

**Think what it means!**

... all the finer comforts of automobiling now brought within reach of everyone... "cheapness" taken out of low price—quality beyond compare, brought to YOU and hundreds of thousands of others who have waited and wanted what may now be had in this real automobile.

Overland Standard Sedan, \$595 f. o. b. Toledo

... a full-size, five-passenger sedan with sliding gear transmission—at less than \$600... a big, powerful motor... honey-comb radiator... oil strainer... positive force feed lubrication... never a bit of lubrication trouble reported in six years of service... a rear axle system equal in size and strength to that used on cars of double the size... springs that give the riding ease of the largest cars... a big car frame with plenty of bracing... here IS a real car... that will hold its own on any road with any car built regardless of price.

**Molybdenum Steel**  
... you've heard the word... but always in connection with cars of high price; it's the steel used in the axle shaft of this Overland; the toughest steel known... in three years we've never had a case on record where one of these axles has broken. In the springs we use Chrome Vanadium steel—the material used in the springs of the finest and most expensive automobiles built.

**Big all the way through**  
... five full-grown people can ride all day in this Overland Sedan and never feel crowded... the front seat is 39 inches wide and 19 inches deep—wonderful comfort for the driver... the rear seat is 45 inches wide and 18 inches deep... the doors—one on each side—are wide enough so that the occupants of the front seat do not have to move to let people into the rear seat... and there

are 20 square feet of glass in the windows to give a clear, open, touring car view.

**Up-to-the-minute details**  
... you get the latest one-piece windshield—clear vision ahead, easily adjusted, easy to keep clean—just evidence of the fact that, in this car, you are getting construction that is years ahead of the price. You get an Auto-Lite starting and ignition system... enclosed storage battery holder... drum type headlights, legal lenses braced with a tie bar—dimmers in the headlights—thief-proof ignition lock—dash light.

**Beauty more than skin deep**  
... there is real beauty—inside and out—in this Overland—long, low lines that blend together and make the car look twice the price—polished lacquer finish, deep blue with black trimmings, graceful moulding on the body, fluted louvers in the hood... fine broadcloth upholstery, expensive looking, wears like iron; the seats are deeply cushioned; Brussels carpet in the rear; rubber carpet in front; the front seat is one piece.

**Safety built into the car**  
... added to the Molybdenum steel axle shaft and the Chrome Vanadium steel springs are other features of strength that mean safety and long wear. The brakes are the largest ever used in a car of this price class... when you need brakes in this car you've got them... Timken bearings are used in the front

wheels; New Departure ball bearings in the rear wheels; the tapered steering knuckles are made of Molybdenum steel; the steering gear is irreversible.

**Service features you want**  
... Overland gives you smoother power and more power because of the L-head construction, the large valves and the more efficient valve operation... right straight through the entire power range, low gear to high, you'll get your best results from the Overland—and you'll get the rattle free, wear proof, trouble absent service that has made Overland known as the longest lived light car ever built.

**Now is the time**  
... right now, when this Overland Sedan is sweeping the country, when the factory is doubling its record breaking output of the past, when Overland value is changing every past standard, is the time for you to look at this great value. An acute shortage is in sight—heavy factory shipments, made in anticipation of a record breaking demand, cannot begin to serve our requirements. Now is the time when you want the use of your enclosed car... before the present value of the car you are driving is forced down by this tremendous Overland new car standard... before the demand places deliveries months away... come in.

We'll trade and let your present car apply as part payment—the initial payment is remarkably low, and the monthly payments are exceptionally small.
