

### UNION OF COPCO IS MADE WITH BYLLESBY

(Continued From Page One)

largest scale which will be made possible by the joining together of the resources and energetic and loyal organization of your company and those of the H. M. Byllesby & Company.

"The arrangement offers the members of the company's organization greater opportunities for advancement in their respective fields of endeavor, and undoubtedly will tend to strengthen the present high value and good marketability of your company's stocks and bonds.

"The sound public policies and relations of your company will be zealously guarded and expanded through the connection with the larger company whose similar policies have made for its nationwide success and popularity."

It is understood from Mr. McKee and his associates in the Copco organization that they believe this arrangement will be of great benefit to the organization and will have the effect of bringing to the assistance of the present Copco group the nation-wide utility organization and financing abilities of the Byllesby company.

The Byllesby management has authorized Mr. McKee to state they propose to carry on the active program of development which has been initiated by the Copco people and that it is probable that this program will be expanded because of the enlarged financial resources which will now be marshalled for the benefit of this property as a result of this arrangement.

Byllesby & Company have long enjoyed a splendid reputation as expert engineers, financiers and utility managers. The company was organized in 1902 by the late Colonel H. M. Byllesby, who had a remarkable career as a pioneer in the utility business, reaching the vice presidency of the Westinghouse Electric company at the age of 26, and thereafter spending many years as a pioneer in various utility enterprises in Oregon and Montana. The company was established primarily as an engineering concern, but the activities of H. M. Byllesby & Company soon acquired a much broader scope and within a few years the firm became prominent in the financing, designing, construction, operation and management of electric and gas companies. A large staff of experts was gathered and maintained who are specialists in all phases of public utility administration, engineering, construction, financing, legal, operation, commercial and advertising. Since the organization of the Byllesby company many utility properties have been purchased, reorganized, financed and developed. The matter of public relations has been handled with remarkable success and the company was one of the first to adopt the new widely-known customer ownership policy of financing. The management has, from the first, been conducted along broad lines, and its reputation for fair dealing, both with respect to the public and the members of its organization, is in evidence in all of the many properties in which the company is interested. The Byllesby company is already well known on the Pacific coast, being interested in the Mountain States Power company in Oregon and Washington, and in the Western States Gas & Electric company, Coast Valleys Gas & Electric company, Sierra and San Francisco Power company and the San Diego Consolidated Gas & Electric company in California.

The fact that this company, which is noted for its intelligent and conservative financing and management policies, has recognized the opportunity in preferred stock of the Copco company and to the residents of the territory served by the company, who may look forward to even greater developments than Copco has been able to make heretofore, because of the diversity of the Byllesby interests which permits of more extensive financing. This move is a direct result of the forward looking policy of The California Oregon Power company which has found expression through its monthly publication, "The Volt," through its new industries department, and in every activity that would tend to attract outside capital to investment in southern Oregon and northern California.

It is of considerable local interest that those in charge of the power company affairs will continue to

live in this territory and that the same direct contact with the public that has characterized the Copco operations in the past will be maintained. The home office of the company will be continued as at present in southern Oregon.

### EXTRAVAGANCE IN BRADBURY REIGN

(Continued from Page One)

fruitless missions, but still are unable to justify the heavy expenditures and the total of \$11,602 which is more than double that of previous administrations.

A geographer who is paid a salary of \$150 a month, is another of the expenditures that the critics do not countenance. It was understood by them that A. M. Thomas, secretary of the board, was to do the work of the board without assistance for his regular salary of \$150 a month.

During the previous nine months of the Nylander board the biggest voucher drawn by the president of directors was only \$25.95. This was paid to G. W. Offield in February, 1924. All the time the Bradbury crowd have been in power the vouchers of the president and directors have been in excess of this amount for the greater part, and the farmers who pay the bills are greatly incensed at the needless expense.

### COL. MITCHELL FEELS HAND OF MILITARY

(Continued from Page One)

tions of the long list of witnesses recessed until Monday.

Meanwhile, Mitchell's counsel will be busy examining such of their witnesses as are in Washington and prying deep into the correspondence relating to aviation which nestles in the files of the various departments and the White House.

The prosecution will spend the interim preparing to combat such defense testimony as it views irrelevant.

The refusal of the court to acquit Mitchell on his attorney's plea that the war department had failed to prove its case, followed a lengthy argument by Frank R. Reid, the attorney's chief counsel, during which he declared that the people of the United States regard Mitchell as "one of our greatest patriots."

### JUSTICE CRIES "NO," AND SCIENCE "YES"

(Continued From Page One)

Blazer be confined in prison for the remainder of his natural life.

An indication of the nature of the defense plea came from Attorney Lewis N. Mowry, who said:

"We may prove to the jury that Hazel Blazer (the doctor's daughter) was not a human being so far as the law is concerned when it says one man may not unjustly kill another.

"We will show that when this kindly old doctor humanely chloroformed this human hulk he was no more morally responsible for murder than if he had killed a helpless crippled dog. We will try to prove that this girl without arms, legs, speech or hope was as helpless as a turtle on its back and had no soul."

Mowry said the defense would prove Dr. Blazer was insane at the time of the crime and show that the physician was justified in ending the life of the deformed, crippled, insane girl.

### WALKER IS ELECTED MAYOR OF GOTHAM

(Continued from Page One)

running second, and Thomas Devine, socialist third.

### DEMOCRAT ELECTED

RICHMOND, Va., Nov. 3.—Harry Flood Byrd, democrat, was elected governor of Virginia Tuesday by a plurality of approximately 75,000 over his republican opponent, S. Harris Hooge, according to incomplete but apparently decisive returns. The rest of the democratic state ticket apparently has been successful.

Despite scattered excitement regarding the activity of the Ku Klux Klan in various sections of the state, the voting was light. There was neither bloodshed nor fighting at the polls.

### FIGHT INTENSE

CINCINNATI, Nov. 3.—Six independent candidates and three regular republican nominees were elected councilmen under the new proportional representation system of voting, the early count indicated tonight. Thirty-nine candidates

# TO YIELD PALM

World's Tallest Building to Be Overtopped by Two Contemplated New York Skyscrapers.

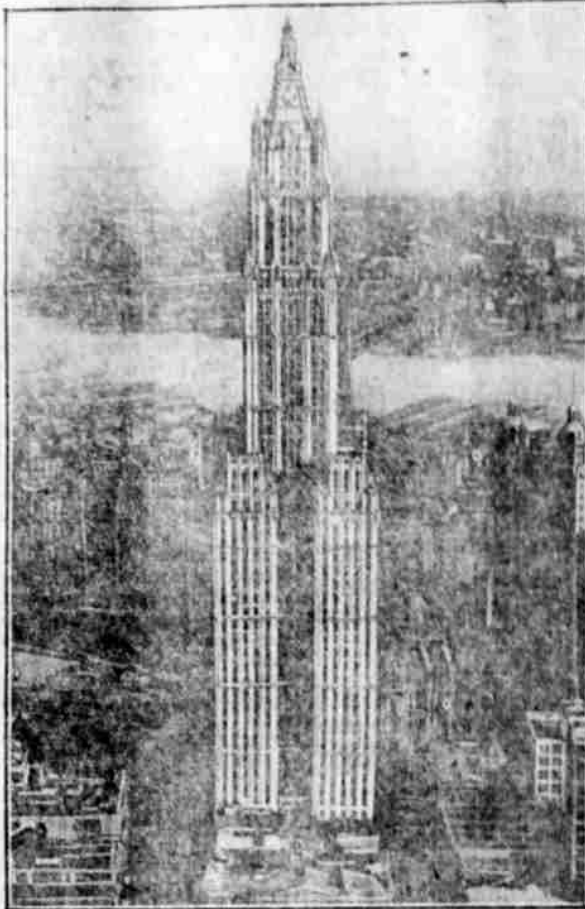

THE great announcement of plans for two huge buildings in New York City, one of sixty-five stories at One Hundred and Twenty-second street and Broadway, and one of sixty-three stories on Forty-second street, has given added interest to the perennial discussion concerning the height of buildings in the larger cities of the United States.

One of the new skyscrapers will be ten stories higher, the other eight stories higher, than the Woolworth Building, which now has the distinction of being the tallest building in the world. But the contemplated structures, according to many leading business men, architects and engineers, neither mark the limit of height to which economic conditions will force skyscrapers, nor the limit of height which present day methods of steel construction make practical.

Skyscrapers Are Essential In the opinion of these men, the cities of the future will be made possible only by skyscrapers of stupendous heights. Only through the construction of skyscrapers, they say, can enough money be made, enough time saved and enough appointments kept. Neither industry nor commerce can be profitably pursued unless activities are so centralized that the banker is handy to the industrialist and the lawyer handy to both.

As for the less material advantages of the skyscraper, it has been pointed out that the towering structures of steel and stone carry one away from the natural annoyances of the ground. The dust and dirt of the streets are left behind. There is more air and more sunlight the higher the building reaches towards the sky. Nuisances of motors and trolleys are left far below.

Made Possible by Steel Steady improvement in the quality of steel, in its fabrication, and in the methods of structural steel design have made practical the erection of such buildings as the sixty-five and sixty-three story structures that are now contemplated. The standard specifications of the American Institute of Steel

The Woolworth Building, soon to lose title of tallest building in the world.

Construction for the design and fabrication of structural steel are among the most recent developments which have not only added to the possibilities of steel construction, but have materially cut both the cost and time elements.

It would, according to architects and engineers, be possible to erect today a skyscraper several times as high as the Woolworth Building. Structures of steel, they say, may be erected to a height of many thousand feet if the load is properly distributed. The "crushing point" of the steel that is now used for large buildings is reached only at the base of a solid column of steel 20,000 feet high.

Economic forces and the potentialities of steel construction combine to point towards the fulfillment of the prophecy made at the last annual convention of the American Institute of Architects, where it was asserted that the cities of the future will be vast agglomerations of titanic buildings rearing their heights half a mile into the air.

were in the field. The fight for office was between candidates named by a citizen's committee and those chosen by the republican organization.

### "WET" CANDIDATE WINS

TRENTON, N. J., Nov. 3.—Commissioner A. Harry Moore, of Jersey City, candidate of the Hague democratic machine has been elected governor by a plurality of 40,000 to 50,000 votes over State Senator Arthur Whitney, republican, who was backed by the anti-saloon league incomplete returns indicated Tuesday night.

In 151 election districts, most of them in Hoboken, Jersey City and Trenton, Moore had 41,152 votes and Whitney, 10,940. These figures did not include any precincts in Newark, where Moore was expected to win with 20,000 to spare, or many rural districts, where Whitney was admittedly the stronger.

### REPUBLICAN ELECTED

INDIANAPOLIS, Nov. 3.—John Duvall, republican has been elected mayor of Indianapolis. Practically complete returns give the victor a plurality of 9,633 votes over Walter Myer, democratic candidate.

### KANSAS CITY VOTE CLOSE

KANSAS CITY, Nov. 3.—In one of the closest mayoralty contests ever seen in the city, Albert I. Beach, republican incumbent, and Ben Jaudon, democrat, were running neck and neck as reports from the last scattered precincts filtered in.

Political leaders of both parties jointly predicted the winners plurality would be less than 1,000 votes.

### REPUBLICAN ELECTED

BOSTON, Nov. 3.—For the first time in the last 20 years Boston has elected a republican mayor. Malcolm E. Nichols, endorsed by the good government association, scored the republican majority victory Tuesday, when he defeated

nine opponents, following one of the most hectic fights in the office in the history of the city.

With the democratic vote divided among seven candidates, Nichols won the election with a plurality of approximately 20,000 votes over Theodore A. Glenn, democrat, his nearest opponent.

Returns from 300 of the 329 precincts gave the four leading candidates the following vote: Nichols 56,509; Glenn 27,754; Joseph H. O'Neil 28,008; and Daniel H. Conkley 18,461.

### VOICE OF CONFIDENCE

PARIS, Nov. 3.—Premier Painleve and his new cabinet have survived the first vote in the chamber of deputies by a margin of 32 votes. Following the reading of the ministerial declaration, the chamber Tuesday night voted confidence in the government by 221 votes to 189.

### SNOW AT SALT LAKE

SALT LAKE, Nov. 3.—The first snow of the season fell here Tuesday and the mercury dropped to 41 degrees in this section's first touch of winter.

(Continued from Page One)

to a question. "Well, I might give you several answers. Service, of course, is one of our aims, and we concentrate on that. Another thing is: We have a tremendous advantage over some other similar organizations.

"For instance, as you well know, our chain of stores, with its allied institutions, allows us to purchase on a huge scale, and, I believe, somewhat cheaper than can some other stores. We have the buying power of approximately 89 stores. Figure it out for yourself."

Again, Mr. Vannice pointed out, the Golden Rule stores figure on a quick turn-over and, as a result, he believes, frequently able to sell merchandise more cheaply than are some other organizations.

When Mr. Vannice first opened up the local Golden Rule store, it boasted but four employees. Now there are 29.

"We all of us firmly believe in the future of Klamath Falls and Klamath county, and we believe that anything we may do for the community will, in turn, benefit us," he said.

Improved fixtures in the store are sought continually by Mr. Vannice. Any device which may tend to expedite the handling of goods, he favors. Recently he installed a cable carrier, which saves customers and clerks considerable time.
