VICTORS ENTER INTO RADIO

The Victor Talking Machine company's entry into Radio will automatically place nearly 6,000 established music dealers in the radio business.

As 65 per cent of radio is music, and service on the best standard makes has been reduced to a minimum through reliability in manufacturing this places radio naturally with the music dealer.

According to Earl Shepherd this entry into radio will open up a large outlet for the radio manufacturers, as many of the hundreds who in the past have purchased Victrolas and pianos will naturally go to the music store when in the market for a radio.

Because the music dealer has an attractive store, is experienced in home entertainment, and can give better terms, he will become a stronger and stronger factor in radio.

Based on rumor, the new radio combined with the Victrola will cost from \$200 up to \$1,000, and will embrace some very startling features. These should begin to come on the market about December 1.

The Victor company will not manufacture separate radio sets, but will confine themselves to the combination models.

Western Air Patrol

The radio receiving set shown above is the Western Air Patrol that was recently put on the market by the Western Auto Supply company. This set is of the five-tube tuned radio frequency type, and is said to give life-like reproduction of every note from the deepest base to the highest treble.

HOME-MADE STATION TALKS AROUND THE WORLD

News items taken from the New York Times were received by the operator of the U. S. S. Seattle, 400 miles northwest of Balboa, and approximately 2,200 miles from Manhattan before the majority of New Yorkers had an opportunity to read the morning news last Monday.

It was 5:40 a. m., eastern standard time, when Irving Korenman, operator of amateur station 2CV, at Brooklyn, New York, was tuning around the world with his low-wave apparatus, when he picked up the U. S. S. Seattle operating on 30 meters. Communication was established immediately, despite the daylight, which is considered detrimental to the success of short waves. The ship's operator, B. D. Wadsworth, asked for press reports. The Brooklyn operator had not seen a morning paper, so he told the Seattle to QRX stand by, until he went out to the news stand on the corner. There he got a copy of the Times and rushed back to his station and put 1,500 words of news on the air. The navy operator was particularly glad to learn about the storm which swept the east and delayed Atlantic shipping on Sunday.

Station 2CV is regularly in communication with amateur stations throughout the United States and has talked with two amateur stations in New Zealand, three in Australia, others in Samoa, Hawaii, Argentine, Chile, Europe and in 43 states. The station is operated by Korenman and a fellow amateur.

PLANE ELEVATION MEASUR- ED BY RADIO

A means for ascertaining elevations of aircraft, the principal feature of which is the sending out of field, Md.

Compactness With Power

By ingenious arrangement of parts and skillful design of circuit, DeForest has made, in the new F-5 Radiophone, an instrument which in compact space is unsurpassed by any set—regardless of size or price—in distance-getting power, volume of reproduction and capacity to separate stations and thus to select the desired broadcasting from among all the programs on the air.
