

USE OF WHEAT FOR FAT BEEF HAS INCREASE

The use of wheat as a feed for fattening cattle with irrigated pasture is proving practical on a number of farms in Oregon, and it is shown by demonstration figures to be an economical method of producing beef. The results of such feeding tests are included in an experiment station bulletin entitled "Surplus Wheat Feeding Experiments in Oregon," issued at Oregon State college.

In tests carried on last summer it was found that wheat fed to cattle on irrigated ladino clover pasture gave results equal to or better than those obtained a year earlier when barley was used as a grain supplement. The test was made by using 12 head of beef calves pastured as two groups on the same area. Seven head were fattened first, followed by five later, with the result that the pasture supported almost exactly three animals per acre during the 190-day feeding period.

It was found that an average feeding of 3.76 pounds of wheat per head per day gave with the pasture an average gain per head of 156.91 pounds or an average daily gain per head of 1.65 pounds. Of the total gains on wheat and pasture amounting to 941.5 pounds per acre of pasture, 346.19 pounds were credited to the ladino clover and 395.13 to the wheat.

Returns from both pasture and grain were somewhat better when wheat was fed than when barley was fed under similar conditions a year earlier, the bulletin shows. As irrigated pasture is becoming more and more common throughout Oregon, its use in connection with wheat offers an important source of profit for the livestock raiser, according to those who are interested in livestock feeding.

The bulletin which reports on this phase of wheat feeding experiments also includes the results of using wheat as a feed for growing and fattening cattle with hay, growing and fattening sheep and lambs, and feeding wheat to dairy cows, hogs and draft horses. Copies may be had free at any county extension office.

Military Objectives in Salonika

Terror is etched on faces of mother and daughter huddled together in Salonika, Greece, during bombing attack by Italian planes.

U. S. Arms Cost May Equal Britain's, Says Writer

By JACK BELL
WASHINGTON, March 20 (AP)—The United States armament spending may soon equal or exceed Great Britain's present monthly war outlay of \$1,500,000,000 if congress votes the pending \$7,000,000,000 lease lend appropriations.

To get this tremendous production program into high gear as quickly as possible, congressional tabulations showed, the government is pouring nearly \$4,000,000,000 into airplane plants, shipyards, tank factories and other industrial facilities. Interested legislators said they were informed that by June the vast armaments production machine—already enlarged by the expenditure of more than \$2,000,000,000 for plant expansion since the defense program started—would be turning out implements of war for the army and navy at a rate requiring a monthly treasury outlay of \$1,200,000,000.

While this was regarded as the temporary peak for strictly American needs, approval of British aid appropriation would call for the expenditure of an additional \$7,000,000,000 during the next 18 months to produce equipment for other nations. This aid program would boost the nation's monthly bill for arms to \$1,600,000,000, about \$100,000,000 more than Great Britain is spending now to prosecute the war.

In a desperate effort to expand armaments production rapidly for such giant demands, the government has outlined expenditures of approximately \$1,863,000,000 for new federal and private plants in the next year and a half.

Of this amount, \$725,000,000 represents projected plant investment to facilitate the British aid program and is included in the pending lease-lend appropriation.

Oregon Vocational Schools Helping Defense Program

EUGENE, March 20 (AP)—Oregon has aided the national industrial training program materially through vocational schools, Rex Putnam, state superintendent of public instruction, said yesterday.

Many of the schools are working on a 24-hour basis he said at the 19th annual commonwealth conference on the University of Oregon campus.

Major Harold F. Osborne, civil defense officer for the ninth corps area, urged municipal, county and state agencies to "plan for unification for the state's part in national defense."

Oregon's mineral industry can add much to the program, Earl K. Nixon, director of the state department of geology and mineral industries, said, adding that the production goal is now \$25,000,000 instead of the present \$10,000,000 level.

By means of a newly invented engine which derives power from intermittent detonation of mixed fuels, carbon disulphide and nitrous oxide, it is claimed that 200 miles an hour may be added to the speed of fighting planes.

DINNER SET FOR BASIN LUMBERMEN

An unusual event scheduled for Thursday evening is a dinner for lumbermen of the Klamath basin given by the Denver and Rio Grande Western railroad, featuring a showing of the "Ponderosa Pine" motion picture. Dinner was scheduled for 7 p. m., and the picture showing at 8:30 p. m.

W. M. Dodds, agent of the Denver and Rio Grande at Portland, said that lumbermen from throughout the basin have been invited to the affair.

The picture was made under the direction of the Western Pine association and was filmed in the Klamath basin.

Water Forecast Meeting Slated

CORVALLIS, March 20 (AP)—A series of seven water forecast meetings to appraise irrigation prospects were announced today by R. A. Work, irrigation engineer under the soil conservation

service and Oregon experiment station.

The meetings: The Dalles, April 1; Pendleton, April 2; Baker, April 3; Lakeview, April 5; Prineville, April 7, and Klamath Falls, April 8. The regional interstate meeting for forecasting the Columbia basin conditions will be in Portland April 12.

Young Diplomat Charged With 'Disloyalty'

WASHINGTON, March 20 (AP)—Through a district court complaint filed against Secretary Hull and other state department officials, Goden H. Hammond Jr., son of a former ambassador to Spain, sought Wednesday to block his dismissal from a career post in the foreign service.

The 29-year-old Yale alumnus declared in his petition that A. A. Berle Jr., assistant secretary of state, had asked him to resign because of reports that he had publicly mimicked President Roosevelt and had "disloyal dealings with a female agent of a foreign government." Hammond specifically denied the truth of both reports and stated they represented a "vicious and malicious fabrication."

Hammond's petition, filed yesterday, named as defendants Hull, Berle, Assistant Secretaries Breckinridge Long, Dean Acheson and G. Howland Shaw, and John G. Erhardt, chief of the state department's division of foreign service personnel.

Hammond served at Vienna and Leipzig, and recently has been on leave of absence from the department. His father was ambassador to Spain from 1925 to 1929.

Hammond supported his petition with exhibits which included an affidavit of Lily Stein of New York that their relations in Vienna and New York were "purely platonic."

Hammond himself recounted, in another affidavit, taking Miss Stein to lunch in Vienna, having her aid in an effort to get evidence of sale of faked passport visas, receiving from her \$100 and a gold watch, and having her take a personal letter to a girl friend in New York. He said he wrote Miss Stein three times from Leipzig and in March, 1940, looked her up in New York and gave her back her watch and \$100.

Some plane factories are now moving planes out of the plant to make final assembly, thus speeding production.

SOCE Professor Back at Ashland

SOUTHERN OREGON COLLEGE OF EDUCATION, Ashland—Ollie Depew, assistant

professor of English at the college, who has been on leave of absence since September, will resume her duties on March 24, which opens the spring quarter at the college. Miss Depew has

spent the last two quarters in study and travel. Forest Robinson, who has been handling Miss Depew's classes, will re-enter the University of Washington for additional advanced work.

FIRST BARBED WIRE
Wooden pegs strung along a length of plain wire, with sharp points of wire protruding from each peg, made the first barbed wire fence, patented in 1867.

OYSTER FARMING
In 1930, Prince Edward island, Canadian province, had 594 oyster farms under cultivation, as compared to only 26 six years previously. Production in 1930 was 4300 barrels of oysters.

COME TO KLAMATH VARIETY STORE'S

GRAND OPENING

SAT. MAR. 22

836-838 MAIN STREET

VERNON POTTERY
The only Authentic Early California Pottery. Cross proof. The highest quality in America. Choice of either pastel or rainbow shades.

Regular \$5.50—20-piece Starter Sets—**\$3.79**
OPENING DAY SPECIAL

Chromium Cooking Ware
Choice of Hollywood Casserole complete with serving tray or chicken fryer.
