Colors Used by Royalty. It is very interesting to know what colors are used or selected by the royal families as being their very own. England, the only royal family of modern times, which has selected it, belongs scarlet, which is very effective. The royal houses of Portugal, Prussia Sweden and some of the German princes wear blue. Russia chooses dark green and Austria delights in black and yellow. Most people imagine scarlet was selected on account of the red rose of the Plantagenet, but this is not true. It was adopted from the field rules of the royal standard and from Henry's adoption of the scarlet cress of the yoemen of the guard .- N. Y.

An Excellent Combination.

The pleasant method and beneficial effects of the well known remedy, SYRUP of FIGS, manufactured by the CALIFORNIA FIG SYRUP Co., illustrate the value of obtaining the liquid laxating property of the control of the c tive principles of plants known to be medicinally laxative and presenting them in the form most refreshing to the taste and acceptable to the system. It is the one perfect strengthening laxa-tive, cleansing the system effectually, dispelling colds, headaches and fevers dispelling colds, headaches and fevers gently yet promptly and enabling one to overcome habitual constipation permanently. Its perfect freedom from every objectionable quality and substance, and its acting on the kidneys, liver and bowels, without weakening or irritating them, make it the ideal levative.

In the process of manufacturing figs are used, as they are pleasant to the taste, but the medicinal qualities of the remedy are obtained from senna and other aromatic plants, by a method known to the California Fig Syrup Co. only. In order to get its beneficial effects and to avoid imitations, please remember the full name of the Company printed on the front of every package. CALIFORNIA FIG SYRUP CO.

FARMING FOR ALASKA

Grains, Flax, Clover and Vegetables Thrive Surprisingly-Also Goats, Sheep and Cattle.

One of the important reports which has just been submitted to congress by the secretary of agriculture and ordered to be printed deals with the agricultural investigations in Alaska. It is important because it brings out some facts in regard to the agricultural capabilities of our vast Northern territory, which will astonish those who have regarded it as a useless ice box, which at nost, was valuable only for the gold it might contain or for the fur and fish it vields.

These investigations, as far as they have gone, indicate that it has latent capabilities which, when developed, may sustain a large population and make it a prosperous state. And why not? The little country of Finland, which lies between Sweden and Russia in the same latitude and is less than population of 2.500,000 and exports [recentage. both grain and livestock, as well as varieties of spring wheat, a dozen varieties each of barley and oates, and and 1,407,379 bushels in 1896. also rye, buckwheat and flax, all of which had matured at the experiment month of February number 745, with Kenai peninsula. The report states that red clover lived through the winter | February a year ago. Liabilities are 3 at Sitka, made a luxuriant growth and matured seed, and that vetches erably smaller than in the same period and other forage plants did equally as a year ago. Failures for the week tried It and know. There well. All of the common hardy veget- number 173, against 168 last week, 170 are a million such women. ables were grown to perfection, some cauliflower at Kenai measuring 14 262 in 1897, and 270 in 1896.

inches across the head. A statement by the superintendent of the Alaska Commercial Company in regard to his company's experience with livestock at Kadiak is of more than passing interest, because it reveals possibilities in the stock industry which are bound to be of much importance in the future development of the country. The company has for many years kept cattle, sheep and Angora goats on some of the small islands near the town of Kadiak. On one of these islands it was not found necessary to feed or shelter the cattle at all, winter or summer. Year in and year out they lived in the open and were maintained solely by the native grasses, which are abundant in all of Southwestern Alaska. The herd increased yearly about 75 per cent of the breeding cows. A flock of Angora goats increased 60 per cent annually and gave very good esults in mohair. A flock of sheep has been kept for the past 16 years on pasture, the year around. The inrease was something over 60 per cent, and the clip averaged about five pounds of wool per head yearly. There seems to be no doubt that animal husbandry can be successfully prosecuted in different parts of Alaska.

Land for agricultural experiment stations has been reserved at three places in the coast region; namely, at Sitka, Kadiak and Cook Inlet, and development work was begun the past season at Sitka and Kenai. A headquarters building was erected and partially completed at Sicka. It is offices, laboratory, library and quarters for the person in charge. Most of the scientific work will be done at Sitka.

The stations are equipped with work oxen and all the tools necessary for pioneer farming. The report enumerates also the lines of experimentation which are of chief interest to that country. They include those which relate to the improvement of the soil, the selection and improvement of small he was a millionaire. Her excuse was grains, experiments with vegetables, the introduction of fruits and experiments relating to the various branches of livestock industry.

SPRING TRADE RETARDED.

Underlying Business Conditions Are

Highly Satisfactory. Bradstreet's says: Stormy weather has retarded the development of spring trade at many markets, interrupting telegraph and railway communication and nearly checking the movement of merchandise. In prices, aggressive strength is still the feature of the cotton and cotton goods market, while retail lines remain steady. Food products, however, have weakened, and are quotable lower. Railway returns continue to reflect large gains over a year ago, though, as pointed out last stant wear. week, comparisons from now on will be with better conditions in transportation matters than a year ago, and phenomenal gains are less likely of attainment

That underlying business conditions are in a high degree healthful will be gathered from the fact that business failures for February are at a minimum as regards the number for that month, and liabilities, only slightly exceeding those of the same month a year ago, one-fourth the size of Alaska, has a have shrunk to a phenomenally low

It is said that in the case of heavy vehicles, such as motor carriages, the principal source of wear and destruction of the pneumatic tires is not puncturing or breaking, but internal strain some raw materials, like wool and hide and friction. In some tires the interior fibers of the rubber have been found reduced to a fine powder by the con-

The Agricultural Department has constructed a new building at Washseeds of all kinds, in order to afford protection against dishonest dealers. Recent tests gave remarkable results. costing 35 cents a pound, was adulterated more than 70 per cent, with seed worth only 10 cents a pound. Orchard grass, purchased in the open market. was more than half bad. Some crimson clover, similarly purchased, was 98 per cent. bad.

As is well known, the soldier's risk of death in battle is not nearly as great as of finding a grave as the result of disease. The most competent authoritles state that on the average it takes a ton of shot to kill one man. For instance, it has been estimated that in the Crimean war the British and French troops fired between them the enormous amount of 45,000,000 projectiles resulting in the death of only 51,000 Russians, while on their side the Czar's adherents killed some 46,000 of the allies, with an expenditure of over 50,-000,000 projectiles ,this representing a death for every 1,087 shots fired.

After an experimental study of more than five years at the psychological aboratory of the Saltpetriere, M. Vaschide has concluded that the brain is always active, and there is no such thing as dreamless sleep. He has watched the sleep of thirty-six subjects eighty years, and his own observations other persons. He finds that the dreams of deep sleep differ from the hallucinations that come at the moment of falling asleep and that of waking. The superficial sleep reflects more the senof deep sleep are more continuous, more logical, farther from reality, and have more to do with one's earlier existence.

Geologists are of the opinion that the vast territory now known as Wyoming once had numerous fresh-water lakes and a climate approaching the semitropical, and that the animals whose bones are from time to time coming to light inhabited these lakes and the adjoining swamps in myriads. They sank into the mud in dying, and their bones were covered with other deposits and became petrified. The large beds are the mouths of great rivers, the animals after death having floated down these rivers to places where they were deposited in these estuaries, thus accounting for the vast deposits which characterize certain localities and which have

Prof. R. S. Woodworth describes in Science a new movement for writers with the pen which, he thinks, has decided advantages over older methods. To write in the new manner, let the top of the paper slant to the right instead of to the left. The horizontal lines across the paper can then be followed by drawing the whole arm, in the direction of the forearm, back toward the flank. "Meanwhile impart to the wrist (and forearm) a back and forth lateral motion which shall produce the vertical strokes of the letters." When this method has been mastered, Prof. Woodworth says, "rapid writing is freer and movement can also be taught, with relative facility, to the left hand.

AN ODD C SE.

It Will Linger Long in the Memory of a Surgeon.

"What was the strangest case I ever had?" said one of the surgeons in attendance at the late convention, repeating the question of a reporter with whom he was chatting. "Well, let me see. I believe the oddest incident of my career occurred in-but hold! on second thought I don't care to give any names or dates. The facts, if you like, were these: I was called by messenger to a cheap boarding house one evening to attend a man who was said to have been hurt in a fight. I found a young fellow of 25 or thereabouts, half dazed, with a bloody contusion on one of his cheeks and a badly broken nose. The bridge was smashed almost flat with the face, and I saw at once that the case would need very careful handling to prevent great disfigurement. Not to bother you with technical details, I confined myself that night to a superficial dressing, and deferred further proceedings until next day. When I called the following morning the young man had quite recovered his senses, and although his clothes were shabby and all his surroundings poor and mean, it was evident from his hands, talk and bearing that he had never done any hard work and was a person of education and refinement. I took him for the black sheep of some good family, but made no comments, and explained briefly that I would try to restore his nose as far as possible by performing a slight operation and inserting an artificial support. To my astonishment he objected flatly, and insisted on letting do seconds, 21@21%c; fancy dairy, 19 It heal exactly as it was. 'But you will be frightfully disfigured,' I protested; Eggs-Store, 12@14c; fancy ranch, 'I doubt if your best friends would recognize you.' Strange to say, that assurance seemed to render him only the firmer, and I was compelled to let him have his way. It was nearly three weeks before he was well, and, as I anticipated, he looked exactly like some battered bruiser of the prize ring. I never saw the man again, but six months later I was shown the photograph of a handsome young chap who was badly wanted for a big embezzlement. I put my finger over the nose and recognized my late patient. He had walked aboard ship right under the eyes of the detectives and sailed for the Argentine Republic. They had his photo, but never dreamed of connecting it with the caved-in counte-

nance of that particular passenger."

on purpose?" asked the reporter. never ascertained," said the surgeon. New Orleans Times-Democrat.

CAMEO CARVING.

Brief Description of the Tools and the

Method Employed. All the tools used by the camecarver would make but a handful. The worker sits before a wheel turned by a pedal; tools occupy a small corner of the table surface on which the worker's hands rest while he holds the shaped stone or shell beneath the needle-like drill. The little pointed instruments which are used to drill resemble those employed by a dentist, and, indeed, it was from the cameo carver's kit that the dentists got many ington to be used solely for testing of their ideas when the tools now in use by them came to be manufactured, thirty years ago. The drills vary in thickness according to the portion of Meadow-foxtail see . from Germany. the figure or design to be executed: some are as fine as the point of a cambric needle. A small china receptable also stands near, filled with oil and diamond dust, and into this the workman frequently dips his tool during the progress of his work. The cameo cutter's occupation is very exacting. He can put in only a few hours' work at a time as a usual thing, because of the tension on his nerves. A quavering hand may be responsible for the single stroke which will spoil a week's work. He must have an eye almost like a microscope, and a very delicate touch, he must be an artist in soul and as skilled a craftsman as is a watchmaker; he must know how to model and draw, and he must have a knowledge of chemistry, so as to remove offending spots. The work is executed in relief on many kinds of hard or precious stones, but essentially the chalcedonic variety of quartz, and on shells. The cameo cutter himself prefers onyx because of its dark and light layers, which throw out in bold relief a white head, say against a black the adopted son of John Morris, a background. He evolves his picture by removing all that portion of the white his death left young Hood some money, stratum remaining after the head has Hood is a graduate of West Point and ranging in age from twelve months to been completed. Sapphire blocks are at the outbreak of the Spanish war orused, carnellan, turquolse, amethyst ganized the so-called immune regihave been checked by those of forty-six and numerous other stones. It takes about one month to execute a portrait on onyx, while much less time is consumed if the work is done on shell. There is always great danger of the latter breaking; and its durability, too, sations of every day, while the dreams is not great, so that shell, as a rule, is not as desirable as the harder materials A portrait on onyx will cost \$200, while

one in shell may be had for \$50. The

Deft Weavers of the Old Sod Turn Ou

a Perfect Imitation. Just a year ago some manufacturers of artistic textiles touring in Donegal resolved on establishing a place for the making of hand-tufted carpets of the description generally known as "Turkish" or "Persian." The peculiarity of this fabric is that from its nature must be a hand production. The tufts are tied by the fingers in knots in longitudinal warps, which are stretched between two long parallel b carpets are made to the size and shape of any room. The design is placed in front, and the girls, from three to a dozen, according to the size of the carpet, select the colors indicated row by row, which are tied, then bound down by "shoots" of woolen weft drawn across the entire width and beaten firm by small iron-toothed hammers. There is interesting variety and pleasure in the work, and it is such that individual skill and workmanship come largely into play. Altogether, it is just such an industry as is suited to the rural districts of Ireland. No steam power is more legible, showing no tendency to required, and there is therefore no handegenerate into the flat scrawl." The dicap on the commercial side by the

absence of coal. The first year's experiment with the Irish girls has proved that they are admirably adapted for the work. The girls show a nimbleness of flugers and sharpness of eye for color and form that have quite astonished their teachers, and they take to the work with a spirit and cheerfulness quite refreshing. So convinced are the promoters of its ultimate success that they have planned out a broad scheme that will espread the work all over the west of Ireland and give employment to many hundreds of girls and boys.-London Furniture Record

A Narrow Escape. A man came to St. Louis from Texas not long ago to see the sights. He had with him nearly four thousand dollars, among which were three one thousand dollar notes. Having no friends in the city, and being fearful of banks, he hid these big bills very securely, as he thought, by pasting them on the inside of his shirt bosom. After carousing for about a week he took his undergarments to a laundry, and three days later discovered at the same time that the bills were still on the shirt, and that he had forgotten where the laundry was. In his despair he left the city and returned to St. Louis, and when he took his clothes to a laundry the proprietor recognized him and said "I have something here that belongs to you." When the careless fellow saw his thousand-dollar bills again he almost fainted from joy. Now he keeps his surplus wealth in a bank.

Why People Are Righthanded. A professor who has made a study of children says he has discovered why the majority of people are right-handed. Infants use both hands until they begin to speak. The motor speech function controls the right side of the body and the first right-handed motions, tending to help out speech. As speech grows so grows right-handedness.

P. J. CHENEY & CO., Proprs., Toledo, O. Sold by druggists, price 75c. Halls Family Pills are the best.

When little Ethel was asked if she was going to Edith's party she said: "I don't know. I asked mamma once, and she said 'No!' But then, I haven't asked her a good many times yet."-Indianapolis Press.

Improved Train Equipment. The O. R. & N. and Oregon Short Line have added a buffet, smoking and library car to their Portland-Chicago through train, and a dining car service has been inauguarated. The train is equipped with the latest chair cars, day coaches and luxurious first-class and ordinary sleepers. Direct connection made at Granger with Union Pacific, and at Ogden with Rio Grande line, from all points in Oregon, Washington and Idaho to all Eastern cities. For information, rates, etc., call on any O. R. & N. agent, or address W. H. Hurlburt, General Passenger Agent, Portland.

In the case of the city of Chicago gainst Charles Netcher, proprietor of the Boston store, the upper court declares the city ordinance, prohibiting department stores from selling meats, groceries, provisions and liquors to be
