IN THE MINING WORLD

Value of a Knowledge of Geology to the Prospector.

(By Earl Douglas, University of Montana.) The study of the remains of plant and animal life that have existed in marked movement in nearly all agri- throughout the United States," said a past ages is like nistory, astronomy, fossil languages, politics and all other branches of human knowledge; it is week. mighty interesting when one gets interested in it. But it is extremely difficult to get very deeply ineterested in something that we know nothing about. There are so many branches of knowledge that one cannot know everything. But the subject on which I am asked to write is, I believe, of vital interest

to the miner and prospector, though our knowledge of it was not developed for their special benefit, but because of of the spring-weight season. the interest and fascination of the subject itself.

Though I never spent a week in searh of mineral veins, I have a fellow in this trade. feeling for the prospector. In the first place, there is a charm in outdoor life in tramping over the hills and mountains and through the deep ravines and rocky canyons; in going into camp tired enough to make rest sweet, and hungry enough to devour with the keenest relish the ham, bacon, coffee, flapjacks and anything else that happens to come along that is eatable; and in sleeping in the pure air under the blue tent of the sky with the whispering of the pines and the varied voices of the mountain streams to charm away worldly cares and lull to sleep. It seems so good not to have to wear stylish clothes, especially if one has none to wear; to be where there is no fear of trespassing on any man's land,

find buried in its treasure house you can call your own. The prospector descends into the dark mine, submitting himself to that it is natural for them to be artificularly slavery awhile that he may "grub pial, so your assertion does not hold .- stake" himself and be a free man for the rest of the year and have a prospect of "striking something rich" and becoming as wealthy or more wealthy

and to fear nobody's dog; to feel that

the world is yours as much as any-

body's, and whatever riches you may

than his employer. The mine owner is much the same Foot-Ease. It cools the feet and makes walking easy. Cures ingrowing nails, swoolen and sweating feet, blisters and is looking for a place where he can

> who have learned little from books and nothing from experience have blundered onto rich leads; but if the truth

and have observed the rock in which they occur. I firmly believe, too, that a man's chances of finding the treasures hid in the earth would be increased many fold by adding to his experience that of other men, by studying the mode of occurrence of ores, the rock formations in which they occur -in fact, the better knowledge of geology and mineralogy he possesses per ton, \$30.00.

it is just as true that the chances of breakfast bacon, 12 1/2c; dry salt sides, failure without the necessary knowlspicuously displayed the number of edge are fully as large. If a sick man, passengers which they are permitted ignorant of the properties of drugs, were turned loose in an apothecary's on the car, no other passenger will be shop he might blunder onto something that would help him, but the chances would be against him. We need not be scared by the voluminous books on geology with their frightful looking names. There are simple, interesting books, giving the most important information, and written especially for prospectors and mining men, and for the understanding of them no previous knowledge of geology and mineralogy are needed. These may lead to deeper study later. But someone will say that certain minerals have been found where no experienced prospector would search and where geologists have said they cannot occur. The trouble is, an old miner comes from California. to Montana and begins to look for gold here. He knows just how the rock looks in which the ore occurs where he mined in California, and he is looking for the same kind of rock and the same

looking ore, but he probably will not find it. An old Montana miner goes to Colorado and meets with the same disappointment. His views of the occurrence of ores are too narrow. The precious metals occur in many different kinds of rock and under a great variety of conditions; and one would have to know the geology of the whole world to know all the conditions in which they occur; yet there are certain underlying truths that, if understood, will vastly increase the chances of success and save not only many years but many life times. Many brother geologists-perhaps I ought to say uncle geologists, for I think they are of the generation that is passing away-have studied a certain region and have judged all the world by that. I might whisper to you, too, that not all who

of that before reading this article. A recent report from Boise, Idaho, is to the effect that a fabulously rich body of gold ore has been encountered in the lows mine, owned by Judge W. B. Heyburn. The mine is located near

"There are probably few people outside the trade who know anything try, and further reduction of prices in concerning the vast number of clothesmanufactured goods, particularly iron pins that are annually required to supand steel and raw textiles, but a ply the millions of housekeepers wholesale dealer in such goods in New tures of the business situation this York to the writer yesterday. "It is estimated that as many as 50,000,000 dozen, or 600,000,000 single pins, are manufactured in Eastern and Western factories every year. The product is superfor in workmanship and finish to anything of its kind turned out anywhere in the world, and is shipped largely to all parts of Europe, where it can be sold cheaper than the rough and poorly made home article.

"Clothespins are made in this country principally out of beach and maple. Blocks of this wood are fed to a very ingenious and exceedingly rapid-runaing machine, which has three separate compartments. One of these cuts a block of wood up into a dozen or more pieces, each of which is suitable for forming a pin. It next sizes and cuts at Chicago, where heavy purchases for the 'crutel,' or place that is to grip the wash on the clothesline, and the final operation turns the neck and head of the pins and smooths and finishes them off by the bushel, ready for use. The pins are then packed in boxes, each containing 720, and the boxes are then nailed up by another labor-saving mathine, ready for the market."-Washington Star.

A National Pawn-hop.

Two recognized national institutions in Mexico are the national pawnshops mer, every article pawned is for sale, if unredeemed within six months, and there are always bargains to be picked up. The rate of interest is not high, and on each article deposited something like the real value is given. Strangest thing of all to our own money lenders, if, when at the end of the time, the owner is unable to redeem It and the article is sold for more than was loaned on it, a note to the borrower invites him to call and claim the surplus over the amount he already has. At the thieves' market there is not so much philanthropy, and he who has lost something of value and would purchase it back is apt to pay dearly for it. The pawnshop keeps short hours, but the candles in the booths of is, if not confessedly, at least tacitly, Joshua stood beyond Jericho." @12.00; choice Eastern Washington mer owner without his consent. Contractors who leave tools or lanterns on the streets come to the market every morning to buy their property back, for the Mexican thief is a clever crook, with persistency that might be directed to a better use, and locks and bolts do win and preserve the heart .- Sir not deter him any more than the police- Humphrey Davy. man on every square that is under the rule of the Mexican city authorities.

I glanced down a mass of unpronounceable names. I up and announced the chapter following and read it.

"When I sat down he gave me a look and he got one back. I whispered hoarsely, 'I guess not.' Those were the only words spoken on the subject." -Utica Observer.

Signaling at Night. A system of night-signaling with

flags held up by kites and lighted by a suspended search-light was tried some time ago at Bayonne, New Jersey. Says Electricity:

The search-light was of about one hundred candle power, and was suspended within a few feet of the flags. The light was sent up at a quarter to 7 o'clock, hung two feet below the flags, each of which was two feet square. Both light and flags were supported by one nine foot and one sevenfoot kite. The flags were fastened to the kite cable by perpendicular staffs. To light the flags the search-light was rigidly braced on the kite cable in such a position that it pointed straight skyward. As the kites carried the cable upward, the glare of the flery pencil passed beneath the flying kites and upward into space. The rapid fluttering of the flags caused the effect of a stream of blue, white and red fire, extending ten or twelve feet beyond the search-light reflector.

This invention will probably not only be used in signaling in time of war, but will produce effects of great beauty in night carnivals.

A meeting of a negro "literary society" was in progress, and the business part of the program was under consideration.

Some one had proposed that the regular time of meeting be changed from Monday to Wednesday night, and the proposition provoked much discussion.

Finally the president of the society equal to the president of the society equal to the president of the society equal to the president of the society. Finally the president of the society equalled. was appealed to for his opinion, and he said, with much gravity:

"Well, membahs ob de s'ciety, pussonally, now, pussonally, I don't car' which night de s'clety meets, but fo' myself I prefers Monday." When the average girl isn't crying

OIL IN CALIFORNIA.

An Interview With a Well Known bil Expert.

A well-known oil expert has the following to say about the California oil The oil production of California is

now about 4,500,000 barrels annually This output is being increased very materially each month by the product of the new wells drilled to oil in the different districts.

The question most frequently asked me, especially by capitalists and those interested or likely to be interested in oil investments is: "Is there not a possibility of overproduction of oil in California

There are two main belts extending through the state, located on the eastern and western shores of ancient, prehistoric seas. One of these produces a black and essentially fuel oil, and the other a green or gas oil.

The black or heavy oil makes an ideal fuel, as has been proven by 20 years of experience in Russia and in this country.

In using oil as a fuel it is necessary to exercise considerable judgment, and to know what kind of oil as well as what kind of a burner to use.

The two oils, the black and the green, lie almost in two parallel belts in California extending on the west side of the San Joaquin valley and running north and south into northern and southern California. There is likewise a similar condition on the east side of the San Joaquin more or less in evilence as is shown by the outeroppings and geological formation. The east ide of the valley, however, has not yet been prospected for oil as has the west ide, where developments have already been, and where by far the largest amount of the oil output of California

is at present obtained. It is true that many far-seeing capialists have entered into the oil business and have reaped rich financial returns already, others have been too onservative and are losing opportunities which are fast being taken up by Eastern capitalists, who are rapidly appreciating the chance California gives

or investments. Many wells are now under way, and new derricks are going up on every side, and I am satisfied that many of these new oil enterprises will be wonderfully secessful and that the financial story of Oil City, in Fresno county, with its dazzling vistas of millions already made and not under prospect, will be told and retold again and again in new fields in the near future.

World to End this Year.

This is the recent decision of one of the ominent societies of the world, but the exct day has not yet been fixed upon, and while there are very few people who be-lieve this prediction, there are thousands of others who not only believe, but know that Hostetter's Stomach Bitters is the best medicine to cure dyspepsia, indigestion, constipation, biliousness or liver and kid-ney troubles. A fair trial will certainly convince you of its value.

One of the most unfortunate mischurch was to slide into the habit of and there are no themes that so magnificently challenge a man's intellectual powers as the themes that associate themselves with religions and with the Christian religion. But even so, theology is not Christianity .- Rev. Dr.
