

A Michigan Miracle.

MRS. HARRIET A. BEGOLE TELLS OF AN UNEXPECTED BLESSING.

Last Her Voice and Did Not Speak—How For Nearly Thirteen Years—How Her Speech Was Restored.

The Ypsilanti Commercial, Ypsilanti, Mich.

Many things appear miraculous that are really the result of natural laws the workings of which can be accurately predicted. A striking example of this occurred in a prominent Michigan family recently, and in this case there can be no question as to the truthfulness of the narrative since it is attested by Mrs. Harriet Begole, of Ypsilanti, Mich., a sister-in-law of Mr. Joshua Begole, who was governor of Michigan in 1838-41. When interviewed Mrs. Begole said:

"In 1836 I suffered from a severe illness brought on by a hard cold. During this illness my voice left me and I did not speak again above a whisper for nearly 13 years.

"I was treated by five local physicians and afterward went to New York and consulted the leading specialists there. They diagnosed my case as partial paralysis, stating that the left side of my throat was entirely paralyzed and the right side partially so. I returned home utterly disheartened.

"For nearly eight years I have suffered from a severe stomach disorder and about a year ago I decided to try Dr. Williams' Pink Pills for Pale People for this trouble. I was much benefited by the first box and was encouraged to persist in their use. My stomach trouble was relieved, my general health became greatly improved and to my surprise I regained control of my vocal organs. I have used five boxes of the pills and last November I spoke aloud for the first time in almost 13 years. I am now 71 years of age and have full control of my voice. I feel so grateful that I wish to make known to others the wonderful curative powers of Dr. Williams' Pink Pills for Pale People.

(Signed) MRS. HARRIET A. BEGOLE.

Sworn to and subscribed before me this 19th day of May, 1899, at Ypsilanti, Mich.

JOHN P. KIRK, Notary Public, Washtenaw Co., Mich.

There is nothing surprising in this cure, remarkable as it is, to those who know that Dr. Williams' Pink Pills for Pale People are so compounded that they act simultaneously on the blood and nerves. They tone up the system and act as a decided digestion as was proved in the above cases. Their power in rebuilding wasted nerve tissue makes them invaluable in the treatment of partial paralysis, and to this fact Mrs. Begole owes the restoration of her voice after years of useless but expensive treatment.

Dr. Williams' Pink Pills for Pale People contain in a condensed form all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, rheumatism, sciatica, neuralgia, strabismus, nervous headache, the after effect of a gripe, palpitation of the heart, pale and sallow complexions, all forms of weakness either in male or female. Dr. Williams' Pink Pills for Pale People are sold by all dealers or will be sent postpaid on receipt of price, 50 cents a box or six boxes for \$2.50, (they are never sold in bulk or by the 100), by addressing Dr. Williams' Medicine Company, Schenectady, N. Y.

Big Rains in California. Rains the past week or two have been so heavy in Southern California that business men are extremely happy. First big rain in years.

ANECDOTE AND INCIDENT

Once, after exposing the ridiculous blunders of the editor of certain old plays, James Russell Lowell concluded with the remark, "In point of fact, we must apply to this gentleman the name of the first King of Sparta." No one remembered, of course, what this was, but when they looked it up they found it was Eurymachus.

As Horace Mann sat in his study one evening, an insane man rushed into the room, and, after abusing him for all kinds of fancied grievances, challenged him to a fight. Mr. Mann replied: "My dear fellow, it would give me a great pleasure to accommodate you, but I can't do the odds are so unfair. I am a Man by name and a man by nature—two against one! It would never do to fight." The insane man answered: "Come ahead; I am a man, and a man beside myself; let us four have a fight."

Prince Bismarck and Bancroft, the historian, at one time minister to the court of Berlin, were one day dining with Herr von der Heydt, who prided himself on the quantity and quality of the food which he furnished to his guests. In those days (1873) Bismarck was still in possession of his wonderful appetite. Bancroft, at first amazed, became at last anxious on seeing his friend twice partake largely of the first courses. "Dear Count," he remarked with a world of anxiety in his voice, "I believe there is more to come." "I should hope so," replied Bismarck, joyfully; and renewed his terrifying practice at the next course.

It was once usual for Highland shepherds to take their dogs into church and leave them outside the pews. Two shepherds at emity sat on opposite sides of the aisle one Sunday, and, soon after the sermon began, the dogs—one a collie and the other not—seemed to enter into their master's quarrel. The shepherds egged on their dogs in undertones, and soon there was a real fight in progress. Most of those in the immediate neighborhood craned their necks over the pews to see how the encounter was coming out, and not a few were standing up. The minister's patience was ultimately exhausted, and so he called to his "hearers" and said: "Ah, well, my brethren, I see ye are more interested in the dog-fight than in my sermon, and so I'll close the book—and I'll bet half a crown on the collie!"

Capt. Hans Miron, who lost his life at his post of duty on the burning Saale at Hoboken, a few months ago, was fond of telling of his early introduction to the stern realities of his chosen career. He had but just come on board the schooner where, as cabin-boy, he was to serve his apprenticeship to the sea, and was still staring about him with boyish interest and inquisitiveness, when the skipper approached and ordered him to assist in washing down the deck. He put down his bundle and started awkwardly to do so, when a second order, accompanied by emphatic epithets, was given him to take off his shoes and stockings. He was perfectly willing to oblige, but at home he had not been permitted to wear his feet. "No," he answered innocently, with an engaging smile, "I should not mind, but my mother does not allow it." The skipper was a rough old sea-dog, who did not appreciate obedience unless it was rendered to himself, and his reply was a stunning blow that flung the boy across the deck. "But after that," Capt. Miron would say, with a great laugh and not a shadow of resentment, "I knew who was captain of that schooner, and it was not my mother."

TUNING A PIPE ORGAN.

It Takes Two or Three Days and Is a Nervous-Straining Job.

"The misuse which many pipe organs suffer is a wonder to me," said a veteran organ tuner and builder. "Church organs cost from \$1,000 to \$10,000. They are very sensitive to changes of temperature and yet many are heated and chilled one week all winter and allowed to get damp soaked in summer. The same people who neglect an organ will take good care of a piano costing a tenth or twentieth as much.

"An organ is a good deal like a human being when it comes to changes of the thermometer. Sudden drops put a man out of tune and it's the same with the instrument. It needs an even, moderate temperature during the winter instead of a roasting on Sunday and a freeze the rest of the week. In summer a stone or brick church gets damp. A slight fire once a week will keep the organ dry.

"A pipe organ requires tuning at least once a year and the best instruments are looked over two or three times in that period. It is a two or three days' job and needs two men. Besides the tuner up in the organ an assistant must be at the key-board to hold down the keys. Temperature has to be considered even in tuning. All the pipes must be brought to pitch at about the same degree, and this degree should be that which the organ usually has when in use.

"I believe that pipe organ tuning is the most nervous work one can tackle. In fact, after long experience I have come to believe that I tune with my nerves. No, I don't refer to the nerves of hearing. I get my impressions that way, but I tune with my nervous system. My assistant strikes the chord, if it is not true I feel a nervous stress and strain. As soon as the chord is true my nerves become harmonious, too. It sounds funny, but it's so.

"Two or three days may seem like a long time to take to tune an organ, but when you stop to think of the 1,700 pipes in a large modern instrument, it isn't so long. A large organ will have a compass of five octaves or sixty-one keys. These instruments have twenty-eight registers and a pipe to each key and register brings the number to 1,708. Not every key and register has a pipe, but as some have two it amounts to that. The pipes are of all sorts and sizes, most of them wood, but many of metal. A small number of the large and long wooden pipes never get out of tune. They are too long. For many years the fancy pipes at the front of

Humors

They take possession of the body, and are Lords of Misrule.

They are attended by pimples, boils, the itching letter, salt rheum, and other cutaneous eruptions, by feelings of weakness, languor, general debility and what not. They cause more suffering than anything else.

WAS PEACHES AND CREAM.

General Starr Always Glad to Meet Young West-Pointers.

A gallant old American soldier who at one time was well known in Kansas had many idiosyncrasies, not the least of which was an irrepressible dislike for young lieutenants when first sent out from West Point. The name of this old soldier was General Starr, and at the time of which we write he was a major in the Sixth United States Cavalry, though during the civil war he had been a brigadier general.

In 1874 General Starr was in command at Fort Riley, and one day an orderly came to his quarters with the message that Lieutenant Morrison, just from West Point, was at the post ready to pay his respects and report for duty. In response to this message the old general was starting for his office, when his wife, a motherly old soul, plucked him by the sleeve and said: "Now, general, promise me that you won't be rough with that young man."

"Rough?" said the old man, smiling amiably upon his matrimonial companion. "Why I'll be peaches and cream unless the young dog riles me." Reaching his office the general was confronted with a dapper little fellow, as sprick and span as though he had just come from the hands of his barber and tailor, while he had the half-supercilious air that seems inseparable from the first stages of military education.

Looking the young lieutenant over for half a moment the old general said with great dignity: "How do you do, Mr. Morrison? I am pleased to see you." Then, as a flush gradually mounted over his weather-beaten features, he added: "I am always glad to see you young men from the military academy. You—you—here the general added with a roar—you think yourselves so smart!"—Kansas City Journal.

GERMAN MASK INDUSTRY.

How Paper and Gauze Masks Are Made and What They Cost.

Paper masks are made by doubling one sheet of a specially prepared paper, wetting it, and molding it by hand over a face form; it is then dried by artificial heat and cut off to form, according to the Consular Reports. Openings are cut for eyes, nose and mouth, and it is painted and decorated by hand as desired. The paper used is made by Sonneberg manufacturers in Oeslau and Schleusingen and costs at present about 14 marks (33 cents) per 480 sheets. One sheet makes three of the common masks. The painting of cheap masks costs about 50 pfennigs (12 cents) per gross; the molding of face casts about 60 pfennigs (14 cents) per gross. Packing is figured at about 3 per cent, as the masks are rolled in brown paper, the ends being folded in to save string. The expenses are estimated at about 15 per cent, leaving the net profit 20 to 22 per cent, as the complete article sells at present at about 1.80 marks (42.8 cents) per gross.

Wire masks are made by stamping a piece of wire netting about one foot square over a face mold in a large machine, inclosing the rough wire edges in a narrow strip of lead and painting. The latter is done by hand in oil colors.

Gauze masks are made by molding over a clay face form a doubled piece of cheap linen gauze that has previously been soaked in a starchy paste. The sticky linen is made to adhere to the form, and this is set on a stove and dried for about twenty minutes. The linen is then taken off and openings cut for the eyes, mouth and nostrils. It is painted as desired, and makes one of the most practical masks known. The gauze mask is used considerably in the United States, but the larger portion of them are made therein by machines owned by two firms, one in New York and the other in Findlay, Ohio.

Terrible Fall.

This is said to be one of the diversions occasionally indulged in at Kansas City: Solem-faced man (with newspaper)—Well, I see there was a singular accident at one of the slaughter-houses out at the stock yards yesterday. A man who was leaning out of an upper story window let go and dropped sixty feet, and wasn't hurt a particle.

Eager Listener—How did that happen? Solem-faced Man—They were pigs' feet.

His Dim Idea.

A teacher was giving to her class an exercise in spelling and defining words. "Thomas," she said to a curly-haired little boy, "spell 'hex.'"

"Correct. Define it."

"An 'hex,' answered Thomas, after a prolonged mental struggle, 'is where you look in the back part of the book when you want to find anything that's printed in the front part of the book.'"

Narrow Escape.

Henpek—What's this? Ah, a blonde hair! Henpek—That must have come off the Belgian hare I had for lunch.—Syracuse Herald.
