Turkish women eat rose leaves with butter to secure plumpness.

Young women may avoid much sickness and pain, says Miss Alma Pratt, if they will only have faith in the use of Compound.

Judging from the letters she is receiving from so many young girls,

#### Men Are Inferior to Cats There are several points in which

man is inferior to the cat. The cat, for one thing, has no vermiform appendix, and consequently never suffers from appendicitis. Furthermore, while man has chosen to be a nocturnal as well as a diurnal creature he has only the diurnal vision; whereas the cat, devoting "its days to civilization and its nights to barbarism." can see in the dark as well as in the light, having a patent adjustable eye.

If this operation is finally establish-She possess nine lives and all of . ed as a successful feature of surgery. them have to be taken in order to get rid of the cat. If the slayer thinks he both laymen and scientists look forslays he knows not well the subtle ward to the following important reways in which this admirable creature sults: passes, turns and brings forward her 1. When They Are Thiraty, The marvelous strength of desert plants is well known, but we are at a loss to explain the source or reasons of their luxuriance in regions where only a few inches of water fall during the year, and that little is immediately drunk up by the torrid sun. What enables the yucca to thrust its head through thirty feet of gypsum and sand or the barrel cactus to store enormous quantities of water and to hold the water for months, perhaps years, or the sumach to cling so tenclously to its ground when everything else is swept away, are questions which none can satisfactorily answer. No less marvelous and inexplicable is the mesquite shrub, which sometimes has roots over fifty feet long, and other desert plants whose hairy coverings and resinous coatings prevent the evaporation of moisture. These secrets may soon be discovered. however, as the Carnegle institution has established a desert botanical laboratory at Tucson to study them.

It was among the desert hills west of Torres, Mex. The Indian cut the top from a plant about five feet high and with a blunt stake of palo verde pounded to a pulp the upper six or eight inches of white flesh in the standing trunk. From this, handful by handful, he squeezed the water into the bowl he had made in the top of the trunk, throwing the discarded pulp on the ground. By this process he secured two or three quarts of clear water, slightly salty and slightly bitter to the taste, but of far better quality than some of the water a desert traveler is occasionally compelled to use. The Papago, dipping this water up in his hands, drank it with evident pleasure and said that his people were accustomed, not only to secure their drinking water in this way in times of extreme drouth, but that they used it also to mix their meal preparatory to cooking it into bread .- National Geographical Magazine.
