The Vital Parts of a

Studebaker

Are Made Just Right

The vital parts—and every part of the Studebaker wagon—are made just right! That's why the Studebaker is the most economical—costs you less per year. They last longer—so the original cost is less per year. They need fewer repairs—so the repair cost is less per year—out to mention saving in time. They are lighter draft—so they cost you less in horse flesh. Horses cost more than wagons; light draft saves horses. Studebaker wagons run more easily than others because each wheel is perfectly proportioned, with the box of the hub set in the exact center. The skein is so set that the wheel runs straight ahead under a load and cannot rick, bind or grind on the skein. Studebaker hubs never hug either nut or collar. That's another reason why the Studebaker is of such wonderfully light draft. It makes hard loads easy for horses.

And it stands up under hard loads. The Studebaker has a carrying capacity at least 40% greater than that of the ordinary wagon. Because skein, axle, spoke, hub and tire are made just right. The skeins have a transverse strength 25% greater than that required by the United States Government. The axles are 3/4 inch deeper than others, and are made from selected butt-cut Black Hickory, seasoned from 3 to 5 years. The hubs are extra large in diameter—made from the best procurable wood. The famous Studebaker slope-shoulder spokes carry the largest amount of wood into the hubs, and are stronger than others are weakest. The tires are cold-set, and are perfectly fitted to each wheel so that there is no such thing as a quickly loosening Studebaker tire. No wonder the largest and best equipped vehicle factory in the world is required to meet the demand for the Studebaker. We are proud to sell the Studebaker. See us.
