

**WITH NEW COURSES, HIGH SCHOOL OPENS SEPT. 4th**

Monday, September 11, at 9 o'clock is the time set for the opening of the county high school. Principal W. E. Faught is devoting his entire time these days in attending to the preparations for the coming year's work, which ought to be the best yet offered by the county institution. The rooms are being cleaned, floors oiled, repairs made, supplies provided, programs made, work assigned and the general equipment gone over with a view to a thorough preparation for the opening day.

The faculty will consist of W. E. Faught, principal and instructor in science; E. V. Hawley, department of manual training; Ernest Eddy, department of business; Bessie B. Ap-Conrey, department of Latin; Addie E. Corwall, department of history and German; and George A. Wirtz, department of music, from last year's corps of teachers. In addition Mr. M. D. Coats will have charge of the physics and debates and Miss Annie M. Tuttle will have charge of the domestic science and teachers' training classes. Mr. Coats, who is a graduate of Kingfisher college, has a wide experience as an instructor, having for the past several years been principal of Northwestern Academy. He is particularly well qualified for handling the debates since he, himself, has carried off the honors in several contests. Miss Tuttle has had charge of the Domestic Science department of the State Industrial school for girls at Morrison, Colo., for the past three years, and is eminently well qualified for taking charge of that department here. The faculty will certainly be greatly strengthened by the addition of these two new members. The other instructors have been members of the high school for varying lengths of time, and need no introduction to Klamath county's educational circles.

This year will see the beginning of a four-year domestic science course which will afford to the high school girls the same opportunity for vocational training as was last year offered to the boys. A contract has been let for extensive repairs to the building in preparation for this work. About one-third of the upper story will be remodeled, windows added, and generally repaired and subdivided into rooms which it is expected will afford abundant space for this department for some time to come. The first year's work in this branch will consist largely of the theory and the science of foods, their value and their preparation, and will be eminently practical, according to the latest knowledge in these subjects. A full equipment for this work is being secured.

About forty boys were enrolled in the beginning manual training class last year, and machinery is now in process of installation for the second year's work in this branch. A beginning class will cover the work outlined for last year, while the second-year class will take up machine work, lathes and kindred exercises. The machines for this work are being installed in the basement, and are some of the best of its kind.

The commercial department will be up to the standard it has always set, and hopes to enroll a good class interest in shorthand, bookkeeping, typewriting and kindred subjects, at the same time securing a liberal education while preparing for a business career. Such a course is acknowledged among all educators to offer superior advantages to the common business college course, and may be had at home with little expense. The equipment in this department is ample and strictly first class. Mr. Eddy, who has charge of the work, is an expert in this line, and has had considerable experience in school and in the business world.

The Latin course is ample to meet the requirements of those who desire a more classical education, and the work admits without examination into all the leading colleges of the Pacific coast. While to many this course may seem less practical than any of the other three, experience has seemed to justify its retention in the schools as the strongest preparation for college and the more learned of the professions, and this work is generally required for students desiring to pursue their studies further than the high school. It is the aim of the school here to make this course equal to that of any four-year high school in the state, and the Klamath County High School graduates in this course have no difficulty in getting their grades accepted in any other school.

In addition to the four courses named above, work in teachers' professional subjects will be offered in the first semester if there is demand for it. It is the aim in offering this work to give the young people of the county who contemplate becoming teachers an opportunity to prepare for the state examinations. Klamath county needs teachers, and there is no reason why any boy or girl who aspires to the teaching profession should not prepare for the work here if they will enter this class. Classes will be organized in school law, theory and

practice and kindred subjects when five or more enter desiring them.

Forty new single seats have been secured and are now being placed in the building. The school has grown too large for its former methods of seating classes in the various recitation rooms to study, besides the inconvenience of the pupils attempting to study where recitations are being heard. To meet both these difficulties a study room will be made of the assembly hall, where all students who are not in recitation will assemble under the direction of a teacher and have the time free to prepare for the next recitation. This arrangement makes it necessary to move the seats at times of public gatherings in the hall, but as they will be in sections this will be a comparatively small matter.

With the additional courses and increased faculty, new equipment will be needed from time to time. Much of this will be built by the manual training department giving valuable exercise to the boys, and at the same time saving many dollars to the county which would otherwise have to order same from school supply houses at much greater cost.

Debate work will come in for its share of attention this year, and it is expected much good drill will be had in this line. Rhetoricals, music, both vocal and instrumental, athletics and school enterprises generally will all help the young people to grow into larger spheres of usefulness and into broader-minded citizens, and in this manner repay the community for supporting so generously an institution which is offering them so many splendid modern aids to good citizenship.

**LONG LAKE TRACT RESTORED TO THE PUBLIC DOMAIN**

Notice has been received here from the U. S. land office at Lakeview that still another tract of land has been restored to settlement and entry, after having been withdrawn as a portion of the Klamath project. This latest tract is lot 7 of Section 29, Township 38 south of Range 8 east. It is a small tract on the bank of Long Lake, as the greater portion of the lot described above is a portion of the lake. This tract, according to the order of the acting secretary of the interior, and approved by the general land office, will be released September 27th. It will be subject to entry thirty days later.

According to the local reclamation officials, the tract was omitted in a former restoration by the department of the interior. It is isolated from the remainder of the Klamath project, and is practically all under private holding.

**PREPARE TO NAIL FALL COLONISTS**

"Fall colonists are a more permanent class than those coming in the spring," said a prominent member of the Chamber of Commerce. "We intend to do all within our power to guide the fall movement to better advantage. All details of this work which will be undertaken in conjunction with the Commercial Club, have not been decided, but it is certain that we will meet the incoming settler half way. Some have talked of putting accredited representatives for the entire state on the trains early, with literature furnishing impartial information about the whole state."

"In the spring the wanderlust gets into the blood of many people. Men looking for a new job are willing to risk a move, but it is in the fall that the agricultural man moves. Then he has garnered his crop, and is in position to take a respite from work. Recognizing this fact, we expect a large movement of real settlers this fall, men who go directly to the country, and who will have the means of getting established there."

While the influx of people last spring was heavy, real estate men and traffic managers concluded early that more than half of the total were not settlers. While no element is repelled from the state, the essential effort now being made is to get settlers. Development of the great agricultural resources is recognized as the first essential in state duty. Because more settlers are expected this fall than at any other period in state history, both the local organizations want to shape to see that every newcomer finds a farm or orchard where he will be contented and which will cause him to write to his neighbors of the latent possibilities here. — Portland Telegram.

**Married Yesterday**  
A quiet wedding was solemnized Wednesday at the Argraves when Justice of the Peace Charles Graves performed the ceremony uniting Miss Laura Eleanor Prosper and Glenn E. Isaacs. Both of these young people are well known in Klamath Falls. They will make their home at the Klamath Agency, where the groom has business interests.

San Francisco, Aug. 17.—An eight-pound girl was born to Mrs. Theodore Roosevelt Jr. here this morning.

**WATER, LIGHTS, HALL, FOR SUBURB**

**ONE YEAR AGO MILLS ADDITION HAD TWELVE PEOPLE—SINCE THEN THEY HAVE ORGANIZED AN IMPROVEMENT CLUB**

About nine months ago, public spirited residents of Mills addition, the slightly suburb east of the passenger depot, realized the fact that though enjoying a healthy growth, their residence district was badly in need of many things. They realized also the fact that "everything comes to him who waits," but as they are all alert and progressive, they decided to try a still better course—"to make a loller."

The result of this was the organization of the Mills Addition Improvement Club, which, organized with a few members, soon included in its membership every live resident of the district. At the first meeting the needs of Mills addition were clearly outlined, and all set to work with a right good will to stir things up.

Today they have one of their energetic members on the city council, a number of improvements are to be noted on every hand, pipe for water is arriving in town and the electric light company is ready to string its wires to the addition. On top of this, they have erected a hall that is a credit to the place, and have secured a school in the suburb for their children.

For some time after the organization, which took place in November last, meetings were held in the homes of the different members; in less than a month they will be meeting in their own hall, erected by themselves. It was during the period of meeting at private residences that President J. W. Ross suggested the advisability of erecting a home for the club, and though some were a little dubious about this, many more jumped to the fore and did their utmost to help the movement along. To the credit of those who hesitated it can be said that they never "knocked"—a knocker cannot live in Mills addition, and as soon as they were convinced that the plan could be carried through by a united effort they lost no time in putting their shoulders to the wheel.

A hall for meeting purposes only was at first talked of, but soon the advantage of having an income appealed to the club members, and instead plans for a two-story building, the lower floor to be used for rental purposes and the upper for the club and other social gatherings, were drawn up.

After the plans had been drawn up for the two-story affair the school question came up again, and the scheme of renting the lower floor to the school district was hit upon. The school board was consulted and petitioned, and soon granted the request for the educational institution, so instead of being compelled to tramp long distances through the snow and mud, causing their parents ceaseless worry on account of their having to cross the railroad tracks, the smaller children of Mills addition will attend school in their own suburb. Three rooms have been fitted up for school, and the term will open September 11th.

Work on the hall is being crowded to completion as fast as good workmanship will permit, and it is the hope of the residents and members of the club to have a "housewarming" in September 1st. A basket social and literary features will be a portion of the evening's entertainment.

When completed the Mills addition hall will represent an outlay of over \$4,000. Of this amount the greater portion was subscribed by the residents, while many of the artisans who worked on the building took stock in the corporation for their wages. Throughout the work has been done by day labor, no contract having been let. The building, which stands at the corner of Wantland and Division, is a slightly structure, and throughout it is built in the most durable and substantial manner. The interior is plastered and finished in oil, while electric light, water and sewage connection have been installed and await the arrival of these improvements in the suburb.

One year ago there were a dozen people residing in Mills addition. Today the population of the suburb, if it does not exceed 300 comes mighty close to that mark. New houses are springing up like mushrooms in all parts of the district, and the sounds of the saw and hammer are to be heard on every hand. In addition to the homes now built, many are buying lots and will commence work next spring.

Water is assured the district, a pipe has arrived here for extending the mains over there. A four-inch pipe is to laid the full length of Front street and three-inch mains will carry the water up side streets. The electric light company some time ago promised the people lights, and at present a crew of men are putting in the poles preparatory to stringing the wires.

The officers of the Mills Addition Club which has done so much for the

betterment and advancement of the suburb follow:

President, J. W. Ross; vice president, L. A. Will; secretary, Frank Applegate; treasurer and manager; Ben S. Owens.

**RANGE OF NEWEST GUN IS 15 MILES**

**LATEST DEATH-DEALERS, COSTING OVER \$100,000 MOUNTED, BURNS UP \$450 EVERY TIME IT IS DISCHARGED**

United Press Service  
WASHINGTON, D. C., Aug. 18.—Apparently there is no limit to the range of the big guns on Uncle Sam's ships and coast defenses. A few years ago a gun could shoot accurately a distance of ten miles, and was considered remarkable, but the latest acquisition to Uncle Sam's armament will demolish any battleship or fortification now in existence at a distance of fifteen miles.

When it is considered that during the civil war only fifty years ago two miles was the greatest range possible with the guns in use at that time, the range of the new 14-inch death-dealers seems phenomenal.

These new guns will be mounted on the largest of the new battleships, the Texas and the New York, both of which are of the Delaware type, and it is claimed that the perfection of these guns will make these two ships the most powerful and most to be dreaded in the world. The new gun is 53 feet, 6 1/2 inches long, and weighs, stripped, 63.6 tons. The diameter at the breech is 47 inches, and at the muzzle 24 inches. Each one will cost \$74,770, and the carriage upon which the gun is mounted will add \$50,000 to this price.

At the muzzle the gun has a velocity of 2,600 feet a second, and the power behind the projectile will drive the latter at the rate of eight miles in twenty-five seconds. The penetrating power of the 14-inch monster is 12 inches of the best face-hardened steel at 8 miles; 11.2 at 10 miles; 10.7 at 12 miles, and 9 inches at 15 miles. The projectile weighs 1,400 pounds is 5 1/2 feet in length and costs \$450. It is loaded with a bursting charge of 45 pounds of "dunnite," the most powerful explosive known. The powder charge used behind the projectile to give it velocity consists of four bags of 90 pounds each of smokeless nitrocellulose.

The cost of these guns at first sight appears immense, but when it is considered that, far over the horizon, one shot from one of these monsters would batter and possibly destroy any battleship now afloat, and that a single round from ten of them at a distance of fifteen miles would be sufficient to lay New York in ruins, the primary cost does not appear so great.

**HOUSE SUSTAINS PRESIDENT'S VETO**

United Press Service  
WASHINGTON, D. C., Aug. 18.—An attempt in the house to overrule the president's veto failed by a vote of 227 to 179, two-thirds not being mustered.

Pandemonium reigned in the house this afternoon when the democrats and progressives attempted to overthrow Taft's wool veto. The members listened to Representative James attack President Taft, and the house rocked with democratic applause as a republican, Congressman Austin of Tennessee, sprung the Champ Clark presidential boom.

"Taft will go down in history as the president who placed his ponderous corporosity in the path of service to the people, the people who trusted him. When the republicans and the president promised a tariff revision downward and he called an extra session," thundered James, "you passed the Payne bill—a bold betrayal of the people's interests. He signed it, and later he declines the wool schedule. This act is indefensible. He had no tariff board when he signed the Payne bill, but now he vetoes the bill cheapening woolen clothing to the country's suffering poor."

**REAL ESTATE TRANSFERS**

The following list of recent transfers in realty is furnished by the City and County Abstract company:  
Klamath Canal company to J. J. Simonds, warranty deed, lot 1, block 7, Canal addition; \$10.

Oregon Valley Land company to Victor J. Pauloo, warranty deed, N 1/2 of S 1/2 of SW 1/4 of SW 1/4 sec. 13-39-15; \$200.

United States to Jas. L. Worlow, patent, lot 5, sec. 21-40-10.

Geo. F. Elliott to Annie Goodrich, warranty deed, part of block 41, Nichols addition.

Geo. S. Woolsten et ux to Thos. A. Turnage, warranty deed, lots 1, 2 and 3, block 25, East Bonanza; \$1.

Oregon Valley Land company to Ida M. Pelts, warranty deed, N 1/2 of NE 1/4 of NW 1/4 sec. 5-36-14; \$100.

John Jensen to E. V. Chardonneau, warranty deed, lot 5, block 50, East Klamath Falls; \$10.
