WOMEN LEARNING HOW TO FARM

(Continued from page 1)

Rome; of the introduction of pewter spoons and knives in the twelfth century, with forks unheard of till the days of Elizabeth; of the dining halls of the lords in the twelfth century, when tables were constructed of rude boards placed on benches, and every man carried his own knife when dining out.

In contrast to those customs, Miss Carpenter had two of her pupils, Miss Waive Jacobs and Miss Marie Griffith, set a table with china, silver and

glass ware, then had one serve the other, this way demonstrating the proper way of serving and the correct usage of knife, fork, etc.

"Good manners," said Miss Carpenter, "is simplicity in doing the kindly, thoughtful thing at the right time."

Miss Clara Elmer of the Central school brought her domestic science class over to attend the short course.

"The Chief Soil Types of Klamath County—Their Qualities, Uses and Handling," was the topic discussed by Max A. McCall, at the beginning of the third day's session of the Klamath county short course in the assembly room of the high school. Mr. McCall used a colored map of Klamath county in this lecture, the different soils of the county being represented by different colors. With this map before them, the farmers could see just what localities contained the different soils.

In a comprehensive talk the speaker told of the methods of treating and handling each kind of soil for the best results; how to protect the land and guard against the many pitfalls into which some of the farmers are in the habit of falling.

McCall was followed by Professor E. B. Pitts, who talked on "Breeding, Feeding and Management of Sheep." Mr. Pitts outlined the successful way of handling sheep from a standpoint of both meat and wool production.

Suitable housing for sheep in winter was strongly urged, and the speaker took occasion to impress on the farmers the necessity of having all barns, sheds and outbuildings warm and comfortable for all animals and to keep the buildings painted as a protection against vermin.

After counting the losses for slack season, it is estimated that three-quarters of the women workers of New York city receive less than \$400 a year.

The erection of an extensive aerial station midway between Berlin and Vienna is expected to lead to regular aeroplane service between the two cities.

The microscope is in daily use in the examination of metals and alloys in more than 200 laboratories in the United States.

The Rooster

Does the crowing, but it takes the hen to meet the demand for eggs.

She will not do it, though, unless you take the proper care of her.

We have for sale at this store cheaper than ever offered before Genuine Ground Oyster Shells, Bone and Grit, Charcoal, Dried Ground Meat Scraps and Chick Food.

WILSON OPPOSED TO INTERVENTION IN MEXICAN FUSS SAYS COUNTRY TOO BIG TO HAVE HAND FORCED

Executive States That the Conquest Would Not Be Worth the Lives That Would Be Lost, While Matter Will Eventually Be Straightened. Says Reports of Coalition Are Not True.

United Press Service

WASHINGTON, D. C., March 2.—President Wilson today made it plain that he realizes that intervention would cost enormous in lives and money. He said America is too big to have its hand forced for selfish reasons, and declared that the present policy would continue, regardless of any pressure.

"People clamoring to have things done in Mexico do not realize that they will have to contribute their brothers, sons and sweethearts to secure immediate action," said he, "while if they wait the same result can be attained with no sacrifice of life."

Wilson said that reports of coalition against the American policy in Mexico were unfounded. He says there is no attempt by foreign nations to float a Huerta loan.

Carranza has informed Bryan that he is investigating the Bauch shooting.

W. M. CHANDLER IS FREED BY JURY; CACKA INDICTED

According to advices from Portland the federal grand jury, which concluded its deliberations late Saturday evening, returned an indictment charging Frank Cacka with attempting to negotiate through the mails forged promissory notes.

The jury also returned a not true bill in the case of W. L. Chandler, thereby publicly exonerating the highly respected resident of the Merrill country, who was detained in Portland a short time by the federal authorities.

Cacka is supposed to be the author of the "Mrs. T. Munthone" letters written to a Spokane bank, in an effort to dispose of promissory notes for several thousand dollars. These had the name of Captain J. W. Siemens forged thereto.

In connection with this charge, Eugene Saxton was arrested in Mineral Idaho, and was held in the Klamath county jail 117 days, before being exonerated by the grand jury. He recently brought a damage suit against the First Trust and Savings bank, of which Siemens is president.

Chandler, who drives the stage line along which the letters were mailed, was called to Portland as a witness. He was held there several days by the authorities, but this is believed to have been a ruse to make easier the capture of Cacka, a Bohemian farmer who lived near Merrill.

Residents of Merrill did not believe that Chandler was guilty, and bonds for his release were posted. When he reached Merrill practically the entire community turned out to welcome him home.

Miss Lyne, who has just returned to this country from a round-the-world opera tour, is probably the youngest prima donna now on the operatic stage. She is only 22, and she has been singing in public for the past two years. Her debut was made in London, and she was hailed as the most promising soprano since Patti. Miss Lyne hails from Allentown, Pa.

A Hindoo child of 7 may be a skilled workman.

UNCLE SAM GOES TO THE COUNTY FAIRS

WASHINGTON, March 4.—The county fair, where the red Hereford bull flaunts a blue ribbon and the prize pumpkin and the trotting race are rivals for attention, has been seized upon by the department of agriculture as one of the most direct methods of reaching the farmer. Dr. W. J. Spillman, in charge of the office on farm management, is organizing a large force of "demonstrators" to attend the fairs next fall and give free demonstrations in everything from making a glass of crabapple jelly to building a barn.

County agents now in the field have done much to aid thousands of farmers in the way of organization and individual effort, but their chief difficulty so far has been to convince the soil tillers that the government so far has been not merely "meddling," and that scientists can do every day things better because they can get at it scientifically.

This difficulty has largely been overcome by tactfulness, such as that exercised by a Texas agent a few days ago when he called on a farmer who said that he was too busy to waste time with a "book farmer," as he had to go to town to get a man to fix a gasoline engine that refused to run.

The agent at once dropped the matter of farm management and made a diagnosis. He cleaned the spark plug, adjusted the carburetor, ground the valves a little and soon had the engine running like new. The delighted farmer thereupon not only found time to talk but to introduce the agent to a dozen of his neighbors. The woman on the farm is also receiving a large share of the attention of the farm management office and a number of women agents are giving time to this work.

Transportation and co-operation are held by Dr. Spillman to be the two keys to the rural situation today and with this in view he never misses an opportunity to urge the use of the parcels post and organization of producers' and consumers' leagues. Furthermore, he believes that great evils come from overplanting one year and underplanting the next, and that a better understanding with the consumer will remedy this.

"In the year 1901 the potato crop was very small and the price was correspondingly high," said he, illustrating this point. "This led to overplanting the next year and the crop was so large that the price was the lowest in fourteen years. This caused underplanting in 1903, which again brought on an abnormally large crop the year following, and so it still goes on. The farmer is confronted with the difficulty that he does not know who wants his produce. If he is afraid he will not get his pay for it, sends it to the city customer he is. On the other hand, the consumer in the city is afraid to order directly from the farmer for fear he will not get what he orders.

"The remedy for this is the organization of a producers' and a consumers' league. Farmers who join such a league should be made to give a small bond that what they supply shall be as represented and the city consumer must give similar assurance that he will pay for what he gets. If 100 or more families bought the principal portion of their supplies in this manner the expense of maintaining

a central office would be reasonable and the advantages would be manifold."

With 190,000 square miles cleared of the Texas fever tick, so fatal to cattle not immunized, Dr. A. D. Melvin, chief of the bureau of animal industry, believes that the fight can be continued until every disease-carrying tick of this species in the United States succumbs. To this end he expects congress to appropriate \$350,000 in addition to \$50,000 for the purpose of encouraging the raising of blooded cattle in the cleaned-up area. It is also the aim of the department of agriculture to have the present laws amended so that it will be necessary to clear cattle of the ticks by dipping them in an arsenical preparation before shipping them to the Northern markets. Originally the tick was found in ten of the largest states below the heavy frost line, but is gradually losing ground before the advance of science.

"As we eliminate a territory of ticks we have to be doubly careful to guard that territory," said Dr. Melvin in support of his plan for killing the ticks before shipping cattle. "In case of accidents to cattle en route, by the breaking down of trains or something of that sort the ticks might get out and re-infest a cleared area. Then there is always the danger of ticks being blown out of the cars, etc."

The \$50,000 sought by Dr. Melvin is to be used in increasing the amount of live stock and improving its breed in areas where animal husbandry and dairying have not been extensively carried on because of the presence of ticks. Special attention will be given to those districts in Mississippi and Louisiana and similar sections where the presence of the boll weevil has made cotton raising a precarious industry.

As a result of the efforts of women in Jacksonville, Fla., the city has secured a proper supply of water.

DEATH AND MISERY THROUGHOUT EAST FROM BIG STORMS

IS WORST BLIZZARD IN TWENTY-FIVE YEARS

From All Parts of That Section Come Reports of Untold Suffering—Railroads Are Paralyzed All Over, and It Will Be Days Before Traffic and Business Can Be Resumed—Wires Are Down.

NEW YORK, March 2.—The entire East is paralyzed as a result of the worst blizzard since 1888. Eight are dead here.

There was a foot of snow at noon. A gale is driving the fine snow before it. New York is nearly isolated, and over a hundred trains are stalled. The railroads have cancelled all trains, their losses running into millions.

Meager reports show the storm is general. In some places the poles as well as the wires are out.

BOSTON, March 2.—All train service is stopped and shipping badly hurt as a result of the storm. Eastern cities are in danger of big fires.

The alarm wires are out of commission, and the streets are clogged so it is almost impossible for apparatus to respond.

PIONEER CALIF. MERCHANT DIES

SAN FRANCISCO, March 4.—E. W. Hale, one of the partners in the Hale department stores, died here today following an intestinal operation.

Hale and five brothers operate a chain of mercantile stores, and he was in charge of the store at Sacramento.

M. Hennon, recently appointed police prefect for Paris, has established a school for policemen, in which recruits will be instructed in their duties by the cinematograph.
