

Whether doing maintenance or keeping equipment operators cool, it's all part of the job

From page 4

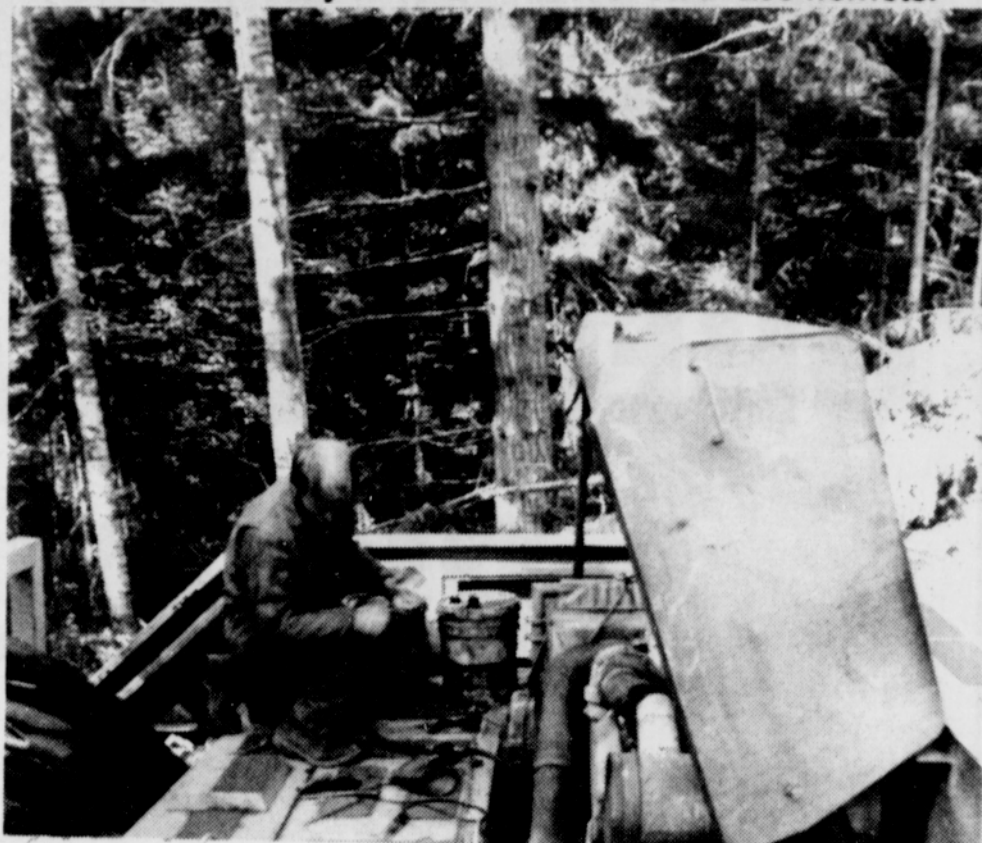

hot Roberts for a turn-around of the skidder's motor fan. Once the process began, Roberts asked how the yarder had performed and Normand filled him in, all the while hooking up the six-ton crane that is part of his mobile unit to the heavy front end of the skidder. In about an hour, he had turned the fan around and was prepared to head back into town.

Before he could leave, a request came over the radio asking him to stop by the loader Larry Elton was operating and see if he could figure out what to do about a muffler/spark arrester that needed to be replaced. That was the next stop.

The numbers on the muffler were quickly located, but Normand felt there was another task that needed to be done as he had heard Elton mention the temperature of the loader a few times that day. So on went the compressor and out came the dirt and bugs from the cooling radiator. While Normand was taking care of the loader, Elton and Amos Cutright arrived to inquire

about how the yarder side had managed that morning. They were updated as Normand finished his task to close a calm day for this

mobile mechanic. Well, it was almost calm. Before he quit, he managed to drag his air line across a nest of bald face hornets.

Normand carefully changes the oil in a log loader while operator Dennis Weller changes the air filter.

Cooling down a hot skidder operator is part of Normand's job.

PRESSURE WASHERS

MODEL RE 102K

- Compact Electric
- Working Pressure: 10-75 Bar (1200 psi)
- Maxi. Water Flow: 7.61/min (2 gal/min.)
- Main Voltage: 110V, 60 Hz
- Motor Power: 1.7kW
- Weight: 12.3 kg

Special \$429⁹⁵

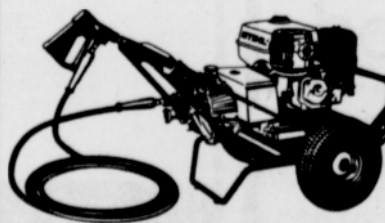

RB 220K

RB 220K Pressure Washer

- Gasoline-powered model for home, farm or commercial use
- Develops up to 1595 psi
- Saves water

- Optional attachments for special tasks like sandblasting
- Solid ceramic pistons for durability
- Cart version available

Special \$1319⁹⁵

RB 400K

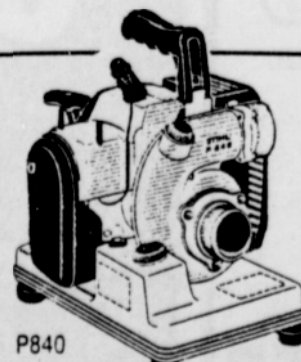

RB 400K Pressure Washer

- Gasoline-powered model for farm or commercial use
- Develops up to 2175 psi
- Saves water

- Optional attachments for special tasks like sandblasting
- Solid ceramic pistons for durability
- Designed for heavy-duty applications
