

CITY COUNCIL MEETING.

Marshal Throws up the Sponge and Clements Don the Star-Tabled the Electric Lights.

A meeting of the city council was held on Monday evening, with President A. J. Cohn and Councilmen M. Leach, J. E. Tuttle, L. Olsen and S. A. Brodhead present.

The committee appointed to confer with Mr. C. Thayer in regard to electric lights for the residence portion of the city reported that no contract had been made, although Mr. Thayer had verbally agreed to put the lights in at the earliest opportunity, and that the price fixed for 15 32-candle power lights was \$16.50 per month. Later in the evening a proposition was read from Mr. Thayer, in which he offered to furnish from 20 to 500 32-candle power lights for \$1.25 each per month, the minimum number of lights to be 20 and the contract to extend over 30 years. The council tabled the proposition, on the ground that the light company wanted to charge the city more for electric lights than private consumers, and that a twelve month's contract was as long as any council should bind the city to take lights from any company. The wording of the proposition came in for some amount of criticism by the councilmen and the city attorney.

The following bills were audited and ordered paid: Recorder's salary, \$10; marshal and street commissioner, \$50; F. C. Foster, gravel, \$77.25; J. A. Taft Co., lumber, \$21.10; D. C. Pierce, \$1.30; water rent, \$20.

The council, at the recommendation of City Attorney Eddy, decided to have all the city ordinances copied into type-written form, revised and re-enacted, and the city recorder was requested to do this as soon as possible, the city attorney promising to give him what assistance he could.

The council decided to order several property owners to improve side walks abutting their property, and took legal steps to improve walks themselves where the property owners had failed to comply with the council's orders; the same applied to some street improvements.

J. F. Jenkins resigned his position as city marshal, street commissioner, fire warden and health officer, which was accepted and Clyde Clements was appointed to fill the vacancy at \$40 per month and the hours to be from twelve o'clock at noon until two o'clock next morning. The first instructions he received was to see that when any house was quarantined on account of infectious disease he was ordered to enforce the law to the very letter, not allowing persons from them on the street while the quarantine lasted or visitors to enter the premises; also to enforce the bicycle ordinance.

Mr. J. A. Taft had offered to donate \$20 towards improving the road leading to the Pacific Mill, and the street commissioner was instructed to improve the street.

An ordinance was introduced and then passed to its final reading which compels saloon keepers to take out a license for twelve months.

Real Estate Transfers.

CAPT. JOSEPH J. DAWSON,
Voluntary Observer.

Cocaine as an Anesthetic.

Any device for the relief of human pain is always a boon to suffering mankind. In such a sense must be viewed the new method of anesthesia by injecting cocaine solution into the spinal canal discovered by Dr. J. Leonard Corning of New York City. Although fifteen years have elapsed since he wrote his first scientific article on the subject, says the New York Herald, it is only within the last few months that the medical profession has carried out his predictions. Now it would appear the more the principle of producing this form of limited insensibility is tested the better pleased are those who are noting results.

For a long time after ether and chloroform banished agony from the operating table it was the aim of surgeons to discover some drug that would accomplish the main purpose in view without inducing an unnecessarily profound narcosis. There was always something weird and dreadful connected with the thought of being subjected to this new sleep and being so helplessly under the control of another. Even to this day many patients have such an instinctive fear of these powerful agents that the ordinary terrors of the knife sink into comparative insignificance.

Especially did it seem desirable that something should be found which should distinctly limit the area of induced insensibility to the part affected and to leave the brain free to think. Then came cocaine to take its place in fulfilling to a certain extent the required condition.

It was while Dr. Corning was studying and experimenting to increase the usefulness and more extended applicability of this new and valuable remedy that he conceived and demonstrated the practicability and comparative safety of injecting the solution in question into the lower portion of the spinal canal. By such means he succeeded in temporarily destroying all sensitiveness in the roots of the various nerves which have their origin in that portion of the spinal cord. As a consequence we now hear almost incredible stories of patients who have watched amputations of their own limbs without the slightest consciousness of a marts or twinge and could scarcely realize that parts of their own bodies were being severed.

Other operations of equal severity have also been performed in this newly created area of anesthesia with like astonishing results. The only thing which apparently remains to be done is to extend the surface of insensibility as safely and surely to the upper portions of the body. This may possibly be accomplished in time, when greater experience with the use of the solution in the present restricted regions of the spine shall warrant the requisite ventures in other and more extended directions.

Even as the matter now stands there is great reason for believing that this principle of treating and preventing pain has a very promising future and a comparatively extensive range of application. Already it has been so successfully applied to the abolition of the pains of maternity that its future use for such purpose is confidently assured.

Notice.

All persons knowing themselves indebted to me will please call and settle their accounts soon.
Having sold my property to Dr. I. M. Smith, I will leave for Portland the latter part of November.
Respectfully,
DR. C. E. HAWKE.

RISKY BRIDGE BUILDING.

Feat of Spanning the Rapids Just Above the Brink of Niagara.

There is no feat in bridge building now in progress in the United States that is more interesting than that which is being done at Niagara Falls.

This new bridge, or bridges, for there will be two, will connect the mainland with Goat Island. The site of operations is right over the upper rapids, and only 500 feet back from the brink of the American falls. The men who work in the very dangerous places in the water are forced to wear lincies tied about their bodies under the armpits, for a fall there would mean that a man would be caught in the current and hurled toward the precipice and over the brink to death. Once in the full grasp of the current and the rapids there would be no hope.

The bridges are being built by the state of New York, for the mainland and islands at this point are part of the state reservation. When a start on the construction was made a temporary bridge was built to connect the mainland with Green island, and another temporary bridge was thrown up to connect Green island with Goat island. The building of these temporary bridges was a truly marvelous thing and many wondered how it was to be accomplished.

In order to build these temporary bridges it was necessary to sink cribs right in the rapids and fill them with stone in order to form piers. These cribs were built on the old bridge and when the form was completed they were thrown into the current, but held by many ropes and wires in order that they might not be carried away. When the cribs were once in the water men slid down to them, a life raft was brought alongside and stone to fill them was lowered from the old structure. In this way seventeen cribs were placed between the mainland and Green island, the largest of which holds eight cords of stone and the smaller two.

Carpenters quickly threw a temporary truss bridge from the island to the mainland. This temporary structure is six feet wide.

The new bridge between the mainland and Green island will have a length of 371 feet, including the finishing panels. It will have three spans or arches and these will have rises of ten, eleven and one-half and ten feet. The two end spans will be 103 1/2 feet long and the center span 110 feet long. The piers will be over thirteen feet wide and have a length of over fifty feet. Their upper end will be protected by a granite nose or ice-breaker and they will be set on a concrete base firmly fastened to the rock bottom of the river. The roadway on the bridge will have a width of twenty feet in the clear, and on each side of it there will be walks for pedestrians. These walks will have a width of nine and one-half feet.

The bridge that is building between Green island and Goat island will be 198 feet long. This bridge will also have three spans, the rises of which will be nine, ten and nine feet. The end spans will be fifty and one-half feet long and the center span fifty-five feet long. The piers of this bridge will also be protected by granite icebreakers and the walks and roadway will be similar to those of the bridge between Green island and the mainland. Steel ribs will be sunk in the concrete to give the structure strength. Along the top of the bridge there will be a suitable railing to afford protection to pedestrians and also to prevent, if possible, people from leaping from the structure.

BARNEGAT.

After a week or two of silence your scribe will send you a few jottings. He has been busy entertaining visitors and hunters, amongst whom were Prof. B. O. Snuffer, who appears to be suffering bad with the hunting fever, and Mr. Thos. Coates.

George Johnson was down looking for the feathered game.
Dell Burdick and wife and John Day and wife visited with friends and relations last week.

The old barn, known as the Sampson barn, which was carried down by the landslide nearly a year ago and stood on the side of the cliff, toppled over and fell into the ocean last week.

Bert Biggs went to the city on Saturday.
Bert Tilden and his brother Clarence, with Dock Walling and a colored gentleman, were down on Sunday looking for spruce limbs.

Timber Claims for Sale.

For sale, two claims, about eleven miles from Tillamook City, being the northeast quarter of section 25, in township 2 south of range 10 west of Willamette meridian, and the south-east quarter of section 26, in township 2 south of range 10 west of Willamette meridian, in all 320 acres. Apply to Arthur Fisher, Box 18, Gladstone, Mich.

"Loyalty," remarked Senator Sorghum, "is one of my great characteristics."
"But you have been known to change your mind once or twice."
"That is true. But my loyalty is tremendous while it lasts. When I attack myself to a man's political interests I stick to him like a brother until he gets defeated."

KREDIT VS. KASH.
Kredit may be considered by some as a great convenience, but to the majority it has proven the greatest curse inflicted upon mankind. The next in kin to Kredit is Kash, and considering the conveniences derived, our would-be friend, Kredit, cannot be considered in the same category as friend Kash. The K. & K. Store, knowing to the above konklusion, and believing that this community will konkur with us, we offer you for kash as follows: A Complete Collection of Kanned Goods, Kookies and Krackers, Koffee, Kokoos and Kokonut, Kandles and Kerosene, Korn and Meal and kondensed Milk, klams and korned Beef; in fact everything usually kept in a first k lass grocery store, so kome and see us.
Yours truly,
KING & KERREMANS.

Prattle of the Youngsters.

"No, Tommie, dear, you don't get any more jam. Next time, when you have been a very good child, you get some more."
"Say, mother, do you think it will keep so long?"
Willie—Mamma, I dreamed last night that papa gave me a bicycle for my birthday and you gave me a watch.
Mamma—But, Willie, you know dreams go by contraries.
Willie—Then you will give me the bicycle and papa the watch?
When 3 year-old Bessie saw some negroes and mulattoes the first time she gravely remarked on her return home: "I saw some black people today and some that were turning black."

The teacher of the juvenile class held up a triangle made of wood and asked what it was. "I know," said a bright little fellow, who had spent the summer on a farm: "It's the frame of a chicken coop."
One evening when the mosquitoes were very troublesome small Bobby cried out: "Oh, dear; if the mosquitoes don't stop biting me there will be nothing left of me!" "Yes, there will," rejoined his little sister, "the bites will swell up and make you bigger than ever."

In one of the private schools here in town, relates Youth's Companion, there is a small boy who is always cheerfully miles behind everybody else. He is not a dull boy, but learning does not appeal to him as being a thing especially to be desired. Recently the teacher told the class in composition that on the next day she would expect each of them to be able to write a short anecdote. She explained with great care the meaning of the word anecdote, and next day when she called the class up to write, all but the laggard went at once to work.
"Why don't you write an anecdote, Rob?" asked the teacher.
"I forget what an anecdote is," said Rob, undisturbed.
"I explained it yesterday, Rob, and you ought to remember," said the teacher, a bit out of patience. "An anecdote is a tale. Now write."
Rob bent over his slate and with much twisting of brow and writhing of lip ground out his task. When the slates were collected his was the very top of the heap. The teacher picked it up and this is what she read:
"Yesterday we had soup made from the antedote of an ox."

Might Be of Value.

"No," he said decidedly, "woman should not have the ballot."
"Why not?" she demanded.
"Because of her uselessness in case of a conflict. The one who votes should also be of service when it comes to fighting."
"I should think," she returned thoughtfully, "that woman might be of value in putting patches on the seat of war."
Thus again was woman's resourcefulness in argument demonstrated.

The Goddess Athena—I sprang full panoplied from the head of Zeus!
The Goddess Hera—Fui panoplied! Why, child, every stitch you had on could be put in one small trunk!

"I must be getting old."
"What makes you think so?"
"Younger men have begun complimenting me on being spry."

"Poets," said the youth with long hair, "are born and not made."
"Possibly," replied the long-suffering editor. "Still, I would hesitate to advocate the Herod method of doing business. So long as we can't discriminate at that early age I am in favor of letting all babies live."
