

TILLAMOOK JOTTINGS.

The insurance on Will Eason's house was \$1000 and \$200 on furniture.

Carl A. Pätzhoff, of Oregon City, has bought out D. T. Edmunds' store and the store is closed today to take an inventory of the stock.

V. e. Nodine, who is painting the new school building, had the misfortune to fall from the scaffolding to the ground, a distance of 30 feet. It was thought at first that he was seriously injured, but beyond a good shaking up he appears to be uninjured, for he is at work again today.

More It's Stirred, Worse it Gets

Frank Wheeler, father of Fred Wheeler, desires us to say that the statements made by Mrs. Fred Wheeler are not true. He claims that she is an irresponsible person, she went to Portland with another woman to have a good time, took lodgings there in a rooming house, was told by her husband that if she went to Portland with the woman not to return and that she has returned to Tillamook for the purpose of making trouble and to secure money. That is the other side of the case and the reasons, Mr. Wheeler claims, his son would have nothing more to do with his wife and that he broke up his home after she went to Portland. We may mention that we interviewed Mrs. Wheeler, in company with other parties, to ascertain whether the reports were correct that she had been wrongly treated, when we took down her statements and published it at her request. We have given both sides an opportunity to be heard, not that we wish to prolong a spicy case that would please and delight the gossips. We, as well as a number of other citizens, thought that Mrs. Fred Wheeler was not receiving right treatment and was an object of commiseration and Christian sympathy. We have material on hand for another spicy article, which would show some additional light why Fred Wheeler was desirous of getting his wife out of Tillamook, but will not publish it at present, for more the matter is stirred up worse it gets.

Peerless "Hard Wheat" Flour is guaranteed the best flour on this market. Money back if it don't suit. Makes more loaves of bread than any other flour. Price \$1.10 a sack. Cohn & Co. are agents for it.

Whitecaps Near Walla Walla.

WALLA WALLA, Wash., Aug. 10.—A threshing crew on Frank Dague's ranch, near Hadley Station, north of here, brutally "whitecapped" a fellow harvester named Ray last night, taking turns at horsewhipping the man as he was tied to a hender wagon, and then rolling him naked in tarweed, finally running him out of the camp with a rifle ball whizzing after him.

This was Ray's story in Walla Walla this morning, when he came in to swear out warrants for the alleged whitecaps. As evidence he displayed cruel cuts and welts covering him from head to heel. Ray said the threshing crew accused him of attempting to outrage the cook, an elderly woman.

Ninety Are Lost.

PARIS, Aug. 11.—An awful catastrophe occurred last evening on the Metropolitan Electric Railway, which runs mostly underground, in which 90 persons are believed to have lost their lives. Eighty-two bodies have been recovered, and the search continues. One of the trains broke down at Menilmontant, which is a poor and populous section of the city. This train was promptly emptied, and the train which followed was ordered to push it to the repairing sheds. On the way these two trains caught fire, but the employees succeeded in escaping. Meanwhile a crowded train reached Les Charonnes, the preceding station, and the officials, seeing smoke pouring out of the tunnel, gave the alarm. A panic ensued, the passengers struggling to escape.

Amid the increasing smoke many attempted to return along the line toward Belleville and were suffocated. The officials seem to have lost their heads and are unable to say how many passengers went out. The firemen for several hours were unable to enter the station or the tunnel, owing to the dense smoke, which poured out in black clouds. Meanwhile tens of thousands of anxious people gathered about the station. All the police and fire engines were on the spot and the excitement was intense.

Finally the firemen succeeded in flooding the burning mass, and shortly afterward they were able to enter the tunnel.

E. H. Harriman, head of the syndicate which controls the California North-western Railway, is planning to make that road part of a Coast system that will eventually have its northern terminus at Astoria, where direct connections will be made with the Oregon Railroad & Navigation Company's line. The extension of the local road to the State of Washington is not a project contemplated for the far future, but is actually under consideration. Engineers of the Harriman syndicate are already engaged in defining the route and estimating the cost of and the time that will be necessary to carry out the enterprise.

Real Estate Transfers.

Furnished by H. T. Botts, abstractor. U.S.A. to Herbert V. Alley. Patent. E 1/2 Nw, sec. 18, Se Sw and lot 4, sec. 7, tp. 3 north, range 9.

THERE IS NO SUBSTITUTE

LIGHT FOR THE FISHES.

Bass Caught at Dusk by the Aid of a Phosphorescent Bob Made of Cork.

For catching bass at dusk the following plan is sometimes tried in the upper part of the state. The fisherman anchors in comparatively deep water outside the lily pads. He rigs an extra rod and attaches a nine-foot leader to the end of the line. At the end of the leader he ties a heavy sinker, and about five feet above the sinker a large bob or piece of cork, which has previously received a heavy coat of phosphorus, says the New York Sun.

Without hook or bait he casts this line well in toward the pads, the line being held in place at the surface by a second cork.

The line is reeled out, and the rod laid on the side of the boat. Then selecting a lively minnow he baits his casting rod and drops the minnow within a foot or two of the other line. He then lights his pipe and awaits developments. From time to time as the minnow swims away from the lure a new cast is made.

The explanation of the success of this plan of catching bass is that the fish are attracted by the phosphorescent bob and in swimming around it find the bait. The plan has proved successful when small frogs or crawfish were used instead of minnows.

An inventive genius, who first saw the lure in use at Upper St. Regis lake, sent to New York for a battery, waterproof wire and ground glass electric bulbs. For some reason the elaborate apparatus was not a success.

Those who made the experiment say the lure is equally effective when used in trolling. For this purpose the lure is made of cork or light pine. It is attached to the line about ten feet in front of the hooks.

PENGUIN PUGILISM.

The Birds Quarrel Over Paralyzed Pebbles and Show Science in Fighting.

It was curious, says Prof. C. E. Borghrevink, writing of penguins in Leslie's Monthly, to see how some of the lazy birds would quickly make off with the pebbles with which they build their nests, and which through great care and work, had been accumulated by one of the band, the moment the owner happened to turn his back. The ostentatious attempt of the culprit to look innocent when caught in the act amused us mightily. The rightful owner of the pebble was sure to pursue the thief and then the two would fight desperately till blood covered their flippers. Sometimes they stood up to each other like pugilists, giving and taking punishment like men, and they exhibited surprising efficiency in the art of hitting. Sometimes they seemed to remember the pebble, the cause of the quarrel, but I noticed that the one who first gave in generally walked off with the pebble, while the other, blinded by success, was left with the honor. Meanwhile the conqueror would return to his nest and find that his kind neighbors had used the opportunity to pebble their nests from his possessions while he had been away struggling so valiantly to catch the thief of one single pebble.

AN UNINHABITABLE LAND.

Boundary Between Utah and Arizona a Desert from One End to the Other.

A well-known civil engineer, H. B. Carpenter, who has recently completed the survey of the southern line of Utah, says the boundary between that state and Arizona does not cross a foot of cultivated land. It traverses a desert, which is cut up by great canyons that are almost impassable. The length of the line is 277 miles. Landmarks along the line will make it possible for the boundary to be located without any difficulty in the future. Just east of the Colorado river a sandstone butte rises 1,600 feet above the plain, and the very peak of this butte is exactly on the boundary. Mr. Carpenter named the peak State Line butte. Not far from this butte is another, which stands 1,300 feet above the plain, and was named Tower peak. These two gigantic stones will always be a guide to persons who have enough curiosity to penetrate the desert in search of the state line.

Lived Down His Reputation.

The king of Italy was unpopular at the time of his coming to the throne, because of the stories of his extreme economy, but has lately shown that, though he is circumspect in his expenditure, he is liberal and benevolent. He gives largely to charity, both organized and individual, and in his social life seems ready to make an outlay that is necessitated by his position. Among his recent benefactions was a gift of 100,000 lire to the town of Palermo, to be distributed among the poor and three charitable institutions. Of this sum 50,000 lire is to go to the poor, 30,000 lire to the town hospital, 10,000 lire to the marine hospital, and 1,000 lire to the Red Cross society.

Writers Who Refuse Titles.

The London academy is authority for the news that Rudyard Kipling might have been knighted along with Gilbert Parker and Conan Doyle, but that he declined the offer. The academy further states that Mr. Lecky refused a peerage, contenting himself with membership in the new Order of Merit.

MANY PEOPLE ACCEPT TIPS.

It is Not Alone the Waiter in the Restaurant That Receives Little "Remembrances."

"Am I," said the waiter, "the only man who takes tips? No, not at all. You, for instance, tell your tobaccoist that in a few days Smith, the millionaire, will be in to see him—that Smith was looking for a good dealer, and you recommended him to go there. Well, Smith goes there and leaves a heavy order. Hence you are not surprised when you receive a little later a box of fine cigars, with your tobaccoist's compliments but if those cigars are not a tip, what are they?"

"Brown is a buyer for a big manufactory. The firm he patronizes is sending him every week or two boxes of toilet soaps, cases of perfumery, dozens of golf balls, and barrels of clams. Those are Brown's tips—the gratuities he gets for his patronage."

"Robinson sends a rich friend to his tailor with a note of introduction, and the rich friend buys four suits. Isn't Robinson being tipped when the tailor, the week following, makes him a present of a set of English flannels?"

The waiter made a disdainful gesture, says the Philadelphia Record, and ejaculated: "Fish! Tipping, they say, is un-American, and a waiter of proper pride and independence would scorn to accept a quarter or a half in return for the serving of a meal. But I say that tipping runs clean through our social system, from top to bottom, and all of us, excepting only the elevator man, are taking tips of one sort or another all our lives."

IS GROWING IN FAVOR.

Tendency Toward Disposition of Human Dead by Cremation Becoming More Popular.

The custom of cremation prevailed throughout the civilized world before the Christian era, excepting among the Egyptians, Chinese and Hebrews, and recent statistics show that there is a constant and growing tendency to return to the custom.

The disposition of the human dead by incineration has been meeting with more and more favor, that has in no wise been retarded since the first cremation society was formed in London in 1874. That same year a crematory was erected in Milan and two years afterward one was built in Lodi, Italy. In two years more there was one in Gotha, Germany, and afterward they began to appear in all lands.

The first one in this country was erected in Washington, Pa., in 1883, and the one in Fresh Pond, L. I., came two years afterward. In this latter eight bodies were cremated the first year and 76 in the second year. In 1900 the total has passed the 600 mark, and during last year it reached 654.

There are now 26 crematories in the United States. In the year that New York's first crematory was opened only 46 bodies were cremated in the entire country, while last year the number was 2,645.

PESTS OBJECT TO YELLOW.

Mosquitoes Will Avoid a Person Who Wears Clothing of That Color, It is Said.

Mosquitoes have their prejudices and one of these is a repugnance to yellow. For this reason residents in mosquito-infested parts are strongly recommended to wear as much yellow as possible. This advice comes from a French scientist who has been investigating the psychology of the little pest. One of the tests was as follows: He took a certain number of boxes and lined their interiors with cloth of different color, and different shades of the same color. Then he liberated in the room a large number of mosquitoes, believing that the colors in the box would attract them.

At the end of a certain time he closed his boxes and then began to count. He found that the insects had a decided liking for dark colors in preference to white and that the most were found in the box which had been lined with dark blue. Not a single one was found in the box which contained yellow. This test may not be conclusive, but it seems to prove that there is something in the tradition that dark stockings attract more mosquitoes to the ankles than do light ones.

Odors from the Skin.

A French medical review asserts that the human skin possesses a certain odor which varies according to the individual, the age and the race. This was noted by Rider Haggard in "Allan Quatermain" when Umslopogaa and Quatermain sat in the tree together waiting to kill elephants on a dark night the Zulu moved away from the lee of the white man, not relishing the white man's personal essence. The nervous system is said to exert much influence over the odor of the cutaneous secretions. Hammond cites the case of a woman who always gave out the odor of pineapple when she was in temper, and that of another who emitted a violet odor when suffering from hysterical attack.

One-Row Cornfield.

A Kingman county (Kan.) farmer is growing a row of corn 25 miles long, not because he has to, but because it amuses him. It coils around a 50 acre field, beginning at a corner and ending in the middle.

Mammoth Industry.

In the United States more than \$60,000,000 are invested in making fertilizers.

State Normal School

Training School for arranged especially for all branches of the approved methods of graded work taught in school. The demand for this school as teacher supply. The Training Department consists of a nine grade course of about 250 pupils, in its branches, including Drawing and Physical Education. Normal course the best and quickest way to State Certificate. Fall term opens September 22nd. For catalogue or information, E. D. RESSLER, President; Or J. B. V. BUTLER.
