Mr. Hammond's Developer.

There is a revival of the old rumor that the Astoria & Columbia River Railroad will extend its line down the coast to the Nehalem or Tillamook. The principal reason given for this extension is the tapping of a fine belt of timber along the Upper Necanicum, as well as other timbered districts lying farther south. It was the timber resources of the country which is traversed that made the Astoria road a profitable enterprise, but incidentally its construction brought into existence a passenger traffic of large and steadily increasing dimensions. It made accessible to thousands of Portlanders one of the finest seaside resorts in the country. Its extension on down the coast would open up more of these resorts, at the same time that it was developing the timber resources and opening up agricultural districts along the line.

The building of this road was one of the few industrial enterprises which have been undertaken in this state—not to take care of a business that was already built up, but for the purpose of developing something new. Evidence of the wisdom and the enterprise of its promoters is now shown in the numerous prosperous little towns which have sprung up along the line, almost from nothing. The poor excuse for a service between Astoria and the beach resorts long ago gave way to a schedule which made "going to the beach" a very attractive pastime for Portlanders; and Seaside, the present terminus of the line, suddenly doubled and trebled in permanent population, while the number of summer visitors increases heavily from year to year. The agricultural possibilities of the country lying between Seaside and Tillamook are perhaps not as favorable as those in some other portions of the state, but there are many little valleys and plateaus which will prove highly productive when their present growth of timber has been coined into money and replaced by fruit and dairy ranches.

When the rich Nehalem is reached, still greater possibilities awaits the road, for the soil of that isolated region produces not only magnificent timber, but about everything else that can be grown in the state. As a developer of natural resources the Astoria road has been a great success, and, while its extension would draw away few if any of the "beachers" who have fallen in love with the beautiful natural surroundings at Clatsop, it would open up new resorts which in time would become as popular as any of those which it now brings into such close touch with Portland. While affording the Portlanders an opportunity to get out and enjoy themselves and spend their money, it would also offer an opportunity for homeseekers who are not afraid of work to carve out a home in an exceptionally favored locality.

With river connection for more than forty years and rail connection for about twenty-five years, the big country east of the Cascade Mountains has been brought in fairly close touch with Portland, but with that country lying over near the coast we are almost as unfamiliar as though it were shut off by an impenetrable wall. Portland is under lasting obligations to Mr. Hammond for giving us transportation right up to the gates of this unknown land, and we should now like to have him open the gates and turn in his iron horses.—Oregonian.

A recent editorial called attention to the fact that the small packers and operators on the live stock markets who are not in the so-called Meat trust were being helped greatly by the strike. The press dispatches now corroborate this statement and give instances of where a number of these little packing establishments are increasing their output, running twenty-four hours a day with three eight-hour shifts and enlarging their plants. Evidently the great American public is going to be fed after all.

While Claude Robinson and his wife of Camden, N.J., were fishing on Mad river, two miles from Camden, on the edge of the Orson woods swamps, a full grown panther leaped from a tree and fastened its claws in the neck and shoulders of Mr. Robinson, who was thrown to the ground. Mrs. Robinson is a slight woman, but her nerve did not desert her. With the aid of only a hunting knife she went immediately to her husband's rescue and succeeded in cutting the animal's throat, and then, woman-like, fainted after the danger was over. The dead panther weighs ninety eight pounds and is beautifully striped.

End of Bitter Fight.

"Two physicians had a long and stubborn fight with an abcess on my right lung" writes J. F. Hughes, of Du Pont, Ga. "and gave me up. Everybody thought my time had come. As a last resort I tried Dr. King's New Discovery for Consumption. The benefit I received was striking and I was on my feet in a few days. Now I've entirely regained my health." It conquers all Coughs, Colds and Throat and Lung troubles. Guaranteed by Chas. I. Clough, Drug Store. Price 50c. and $1.00. Trial bottles free.

Notice.

Bids wanted for the board, washing for and care of Asa Woods.

Bids to be filed with the County Clerk of Tillamook County, Or., on or before the 7th day of Sept, 1904.

FEDERAL IRRIGATION.

Work which Has Became of Great Importance to the Country.

The work of the geological survey in carrying out the provisions of the national irrigation act has brought it to the fore as one of the great executive departments of the government. With a government irrigation fund which will be by the end of the present fiscal year in the neighborhood of $25,000,000, this work must be recognized as one of the very large internal improvements of the country. Although irrigation operations are confined largely to the sixteen arid and semiarid Western states, the eastern part of the country must be more or less interested for several reasons. Men are constantly moving westward looking for new homes where they can earn a livelihood or become land owners, while business men are interested in seeing a development of the West which will afford them wider home markets for their manufactured products. The changing of the Western deserts into tens of thousands of new and productive small farms will not only relieve some of the overcrowded sections of the East, but will stimulate business of all descriptions, just as the opening of the great Mississippi valley provided a market for the American manufacturers such as Secretary Wilson says, as can be found in no other part of the world.

Already the geological survey has designated some fifteen large irrigation projects throughout the West, where huge impounding dams and ditches which will be as large as rivers are to be constructed. Work is already commenced on some of these, and the next two or three years will see the national irrigation policy in full operation.

The $25,000,000 now practically available for irrigation construction is by no means the limit of this work, since the fund is constantly growing, through the sales of first irrigation work is completed the cost of its construction will begin to come back into the fund for use on some other project. It is not intended that the government shall give away the irrigation works. What government land is placed under irrigation will be given the homesteader free, conditional only upon his residence and cultivation; but the cost of putting the water on the land—the construction of the dam and the main ditches—will be borne by the settler. It is this business-like feature of the irrigation act which has found for it such support among the business men of the country.

The Dairy Test at St. Louis.

The dairy test now in progress at St. Louis is the most important ever undertaken in this country.

Four breeds are represented in the test and for forty days have been under the eye of dairymen. Three of these, the Holstein, the Jersey and Brown Swiss belong to the strictly dairy breeds, while the fourth, the Shorthorn, are classed as a dual purpose breed.

The test has been on since June 15 and is to extend over 100 days. The test is fourfold. First, the amount of milk furnished; second, the amount of butter fat; third, the total solids; fourth, the amount and cost of feed—showing the cost of the dairy products of each breed. In the test are twenty-five Jerseys, fifteen Holsteins, five Brown Swiss and twenty-nine Shorthorns.

The test will be conducted with the utmost fairness and each breed will have an equal chance. The last reports are that the cows are suffering from the intense heat at St. Louis and electric fans are being installed for the comfort of the cows. With the advance of the season cooler weather will prevail and the cows can better digest the large amount of food that they must eat to turn out the large volume of milk to make a great record.

Dairy Strippings.

Wisconsin milks more than a million cows and turns out 90,000,000 pounds of cheese per year. This comes from nearly 2,000 cheese factories all over the state. If this cheese was shipped all at one time it would make 3,500 carloads or 125 trains of 35 cars each.

* * *

This good advice we found in the Midland Farmer: Don't keep throwing away money patching rusty milk cans, when at best they will last but a little longer; such a practice is decidedly disastrous to the quality of the milk. Throw them away and get some good, new cans, well tinned. Always empty them as soon as they return from the creamery; wire dry after washing and give them a daily sun bath. Given this treatment, a good can ought to last seven or eight years.

* * *

Many dairies could be changed to a sanitary from an unsanitary condition without the expenditure of a single dollar in cash. More light, more fresh air, better arrangements for bringing the feed and for removing the manure, a little time each day to clean the stable and the cows, a coat of fresh whitewash once or twice a year to cover and kill the bacteria on the walls and partitions, these things are not expensive; and perhaps a new ceiling or floor above the cows to exclude dust from the haymow would be worth while.

Rough spruce lumber sawed to order, for $7 00 a thousand, at the Tillamook Lumbernig Co.

VERY DANGEROUS.

There Should be no Guess Work.

The fitting of spectacles or eyeglasses is purely a mechanical science, requiring a thorough knowledge of refraction and the eye, the aim being to correct deformities of the eye, which are nearly always congenial. The real science of the work lies in the scientist's ability to measure to an exact nicety the errors of refraction existing on account of these deformities. To make these corrections we use commonly three kinds of lenses, viz: Spheres, cylinders and prisms. Using these lenses separately and in combination with each other there can be made more combinations—all of which are absolutely necessary—than are words in the English language. This should prove to the average thinker that there should be no such thing as guess-work, and that it cannot be done by the old-fashioned "cut and dry" system of mechanics. Therefore, when your optician or oculist encourages you to buy from him by telling you if they don't fit he will "change them," you at least have cause to lose confidence in his ability as a refractionist, for the scientific fitting of glasses is farther from the "cut-and-try" system than any other known science, and if he cannot fit you the first time what assurance have you that he can ever do it? He proves at once that he is guessing at it.

Dr. A. T. Roberts has a thorough knowledge of everything partaining to the eye, and has all the latest scientific instruments necessary for the most intricate examinations, and guarantees his corrections to be as perfect as can possibly be made through artificial refraction.

He particularly solicits a call from those who have tried in vain to get perfect work in this line.

Examination free at the Tillamook Hotel in this city.

Personal Pointers.

Ex-Empress Eugenie may be seen almost any fine day taking long rides in a motor car in Paris.

W. L. Douglass will donate to the town of Brockton, Mass., a surgical building fully equipped.

No explorer before Stanley found exploring a lucrative vocation. He left nearly $1,000,000.

George Frederick Watts, the English artist who died recently, rarely worked from a living subject.

Undoubtedly the oldest living poet is Colun Wallace of Oughterard, Ireland. He is 109 years of age.

The richest man in Greenland is a Mr. Kor-ko-ya. He owns a small fleet of fishing boats and has about $1,500 laid away. But in Greenland this is about the same thing as being a millionare in any other part of the world.

H. H. Vreeland, president of the New York Street Railway company, never uses a free pass on his line, but invariably pays his fare. Should an unlucky conductor overlook him on his collecting tour, as conductors frequently do with others in their rush hours, he would probably hear from the president's office the next day.

John Roberts, a noted London billiard player, now in this country, having nearly circled the globe, says that in India and China particularly the English game is played. In Java he found the American, or French, game mostly in vogue. English tables are different from the American and the game differs from that played here, being, he says, more scientific than three-ball billiards.

Rob their Guards.

VALE, Or., Aug 7.—Looking their jailer in a cell, stealing the horses of the Sheriff and City Marshal, Robert Hess and Edward Chester, two noted horse-thieves, made their escape from the Malheur County Jail here this morning.

A posse was organized with all dispatch, but Hess and Chester, are heavily armed and know the country thoroughly. They are known as desperate characters who will resist arrest to the last.

Deputy Sheriff Thomas was given the prisoners their breakfast at 6 o'clock this morning, when he was seized by them, gagged and placed in the cell thay had just vacated. A rush was made into the Sheriff's office, where guns owned by the Sheriff were secured. A horse owned by the Sheriff and another belonging to the City Marsnal were captured before anyone knew what had happened. From their tracts it is evident the desperadoes made for the hills with all speed.

Vale is a small town of about 300 inhabitants, and of those few were astir at the time of the escape, and it was two hours before the citizens became aware of what had transpired. A party was then organized and started in pursuit.

Hess and Chester were recently arrested on the charge of horsestealing. They had 17 stolen horses in their possession when arrested. Previous to that they attempted to ship two cars of stolen horses from Parma, Idaho.

WANTED.

SPECIAL REPRESENTATIVE in this county and adjoining territories, to represent and advertise an old established business house of solid financial standing. Salary $21 weekly, with Expenses advanced each Monday by check direct from headquarters. Horse and buggy furnished when necessary; position permanent. Address Blew Bros. & Co., Monon Bldg., Chicago, Ill.
