CRANBERRIES GROW IN TILLAMOOK.

1,000 Bushels of Berries to the Acre--Profitable Industry.

But few counties in Oregon can lay claim to raising crauberries, but of the few, Tillamook stands pre-eminently as the leading county of Oregon fitted to monopolize that industry, and as one which affords ample opportunities for those who desire to enter upon the profi table occupation of raising cranberries, Conditions in Tillamook County are such that the cranberry industry is bound to grow to large proportions, and become a great factor in the development and industrial prosperity of the county, whether it is developed by local enter. prise or by those seeking homes in the Northwest, where they can make comfortable and independent livelihoods.

A few years ago cranberry raising in Tillamook County was only in its experimental stage. Today it is a demonstrated fact that those who first experi- live in this climate. mented in cranberry raising are now possessors of valuable cranberry bogs It has surpassed all their expectations. To give a correct and concise idea of this industry in Tillamook County, we may state that it is only in its infancy.

What Mr. W. C. King has accomplished in this respect, every industrious person can do. Like every other industry, it requires labor and a certain amount of capital to develop, and with these combined, success awaits those who turn their attention and energy to cranberry culture in Tillamook County. Mr. King says:

"I commenced the culture of cranberries in the spring of 1893. I find that the vines are well adapted to this climate. They grow vigorously, and where the bogs are properly prepared, they are enormously productive. While picking my crop one year I measured off some ground and picked them carefully, and found that they produced at the rate of one thousand bushels to the acre. Allowing \$1 per bushel as a net profit, I do not know of an agricultural product that will compare with it, and placing figures at a minimum.

"It cost from two to four bundred dollars to prepare the ground and plant the vines, including the cost of plants. The land which has timber standing on it is the most expensive to prepare, although none the less adapted to the raising of cranberries, so long as the land is made up of vegetable muck or

"The bog must be so situated that it can be drained off by means of ditches to the debth of at least 15 inches, and one must also have control of plenty of water for irrigation and flooding pur-Although I have seen marshes that were a success without any water supply, I do not consider it safe, in view of a large outlay.

"A bog once set in the proper shape will last indefinitely. The first cost, although quite large, cuts little figure in the long run.

"I find that the cranberries grown here are of a darker color than those grown in the East : those here are much superior in flavor, and also weigh more to about the same.

"According to my experience, the Mcthe Pacific Coast. It is the largest and most important localities in a new open land from the town site, is a As time passed the aplary was enlarged, comb and sell it for 10 cents per pound. most prolific, a splendid keeper, and by all odds the best seller. In the East this sort is considered a poor keeper, but it appears to be better adapted to this chmate, and grows to perfection here.

pleasure, for several reasons, to both to Capt. Cleveland Rockwell's coast Lake district. generally fine-September and October for an outing in the cranberry fields, and improvement, They come with a camping outfit, prepared to enjoy the pleasure of out-ofdoor life, the health-giving ocean breezes, and a rest from the city and home toils.

"In picking, lines are stretched across a plot of ground three leet apart, and each picker works between the lines, the vines making a carpet upon which to work. They hang on uprights about six inches high, and are truly beautiful to look upon. The berries, a bright red color, and, in many cases three and four deep and touching each other, com pletely hide the vines and ground be

"The pickers are giving a six-quart measure, and are required to pick the herries clean as they go. When the measure is full it is emptied into a bushel box, and when the box is full they are given a check which is good for 75 cents. Yard men are in attendance to oversee the pickers and carry away the boxes. My best pickers picked about three bushels per day.

From the town to within spring, their instinct taught them that tached, will sell where other brands will

in former years were Messrs. A. Compton, Jasper Smith, Krebs Bros., A. C. Gist, and others who owned a dozen or more stands. About 12 years ago Krebs Bros. erected a bee hive factory near Three rivers, where they manufactured the well known Simplicity bee hive, as well as sections, frames, etc., for the same. They also had a machine for rolling the wax into foundation, or more commonly called "starter." Their business grew for a number of years, until the people, engaging in other and more lucrative pursuits, became neglect-

hillsides endless quantities of luscious When facilities for the lees placing could be had, the honey could be put debth of at least 15 inches; plenty of to it, furnishing to the outside world their abode in this land of evergreen dition. When this was done, a demand 100 feet of a place for a trapeze landing, this was the natural home of the honey not, as in this form it may be of a manu.

rains in the early spring the past few years, it is with regret that we note our people have not given the attention to bee culture that they have in the past. Yet nearly every farmer has several stands, from which, if properly cared for and the season is favorable, he may realize from 50 to 150 pounds of the best honey, which, if placed on the market, would yield a handsome return to each stand.

The bee business of this section is not overdone, as the outlying range offers ample opportunity for the little workers to sap the succulent weed of its sweetness, as they will travel for miles, and return beavily laden ; and, if necessary, stop to rest while carrying their burden.

Tillamook Jottings.

Tillamook is a stock raising county. Tillamook hay sells from \$6 00 to \$15.00

Tulamook County is a land of milk and

honey. Tillamook County has no disastrous

floods. Tillamook County is a world beater for

grasses Tillamook County grows immense crops

of potatoes.

Tillamook County had only 24 deaths

during 1906. Tillamook cows keep in fine condition

the year round. Tillamook dairymen are happy, indus-

trious and thrifty. Tillamook County is not pestered with

tramps and hobos. Tillamook rivers and streams have plenty of trout and salmon.

Tillamook County for profitable and successful dairying.

Tillamook dairy farms are not covered with mortgage plasters.

Tillamook County dairymen have bank accounts and loan money. Tillamook County is being cleared up

fast for dairying purposes. Tillamook County contains soil that is

especially adapted to onions. Tillamook County is not troubled with

cheap Chinese or Japanese labor. Tillamook County grows garden truck

which no other section can surpass. Tillamook County has some magnificent

landscape and rugged coast scenery. Tillamook honey is supurb, and for flavor and clearness nothing can surpass it.

Tillamook County has large bands of Angora goats and is a profitable busi-

Tillamook County affords splendid enjoyment to campers and summer out

Tillamook County is free from insect pests, for the salt sea breezes soon kill

Tillamook dairymen are paid once and sometimes twice a month for their milk.

Tillamook County is an inviting field for all classes who are possessed of some

Tillamook County has a reputation for pure, cold spring water, which is found

every where. Tillamook County will become the great manufacturing center for lumber in the near future.

Tillamook County produces splendid strawberries, Logan berries and other

small fruits Tillamook County had 108 inches of rain fall in 1906, which kept the grass green

the year round. Fillamook dairymen are making money

and enjoying life, being an independent class of farmers.

Tillamook County has been settled for 50 years and no one in all that time

has lost a single crop. Tillamook meadows are green and afford abundance of green pasture during the

hottest summer months. Tillamook County is the most healthy

part of Oregon, with a mean temperature of 51 degs. last year. Fillamook County is the sportsman's

paradise, with deer and bear hunting, combined with splendid fishing. Tillamook County has no saloons, the

people having voted on two occasions that they were opposed to them.

Tillamook County will soon have two railroads and one or more electric road which will all be completed next year. Tillamook County never had a crop failure and the various kinds of hay, oats,

barley and edible roots yield in profusion. Tillamook farmers are wide awake, well informed, hard workers, industrious

and adapting themselves to all the new devices. Tillamook County is a place where peo-

ple can make an easy living if they have enough means to enable them to own a small farm.

Tillamook County raises oats, the yield being as high as 100 bushels per acre on the prairie lands and even better on the rich bottom lands.

Tillamook County produces many wild berries during the summer and autumn, such as salmon berries, thimble berries, two kinds buckle berries and sallal betries are most common.

Tillamook County contains whole forests of big trees, many of them being 40ft. in circumference and over 300 ft, in height. Most of the forest trees measure from 15ft. to 20ft. in girth and are often free from limbs for the first 150ft.

Tillamook County has numerous cheese factories, and as a same of what they factories, and as a same of what they are doing, one factory received during 1906, 3,745,480 pounds of milk, made 387,180 pounds of cheese, received for same \$45,484.20, and gave \$66.78 per cow for 681 cows.
