**Hot Stuff.**

The following, clipped from an exchange, makes good after-election reading and contains a whole lot of good, wholesome truths. Every newspaper in Oregon is open to the man who wants to make honest criticism, and has the backbone to sign his communications. If public improvements can be done better or cheaper; if the way city affairs are conducted do not suit you, write a letter for publication telling how such matters can be improved, and your home newspaper will gladly give it space. Our exchange says:

"Don't ask the editor to write up every evil in the town or community, but when convinced that such duties need attending to write an article for the paper yourself and sign your name to it for publication. The man who is too big a coward to thus express his opinion is the very one who stands on the corner and talk loudly about the editor. The world is full of moral cowards—men who see evil and are afraid to grapple with it.

Probably if the shoe tracks of nine tenths of the people who come to an office to reach the editor could be traced home, the track would be found to lead to the homes of men who never go to a caucus or interest themselves in the candidacy or election of a county attorney or attorney general who would enforce the law. The world is full of men and women who, to play to an audience, like to sit in the galleries and cheer the man who is losing his hide and most of his respiratory and digestive apparatus in the arena fighting the beast of evil. Not one in 10,000 climbs down and helps.

Every newspaper receives enough unsigned communications in six months' time to keep him in trouble the rest of his lifetime if he would punish them. All newspapers get them. Let the editor stand up for decency as per instructions of the old, valued subscriber; let the editor denounce the evil which his friend is afraid to hint at over his signature, and when in the stores and offices of the town the devil is fighting back, accusing the editor of double motives, calling him a blackmailer and abusing him generally—who is the little man drawing his head down under his collar like a turtle? That, gentle reader, is the cherty gent who pranced into the office the day before and said: "Sometimes I wish I owned a newspaper just for one day to denounce the evils of this town. Why don't you sail in? Denounce that gambling house in the Smith block; get after that joint down in the Jones building; run those women out of the town; go after this and that fellow whose every-day life is rotten," and so forth for 5000 words. As a rule, men behind newspapers have as much courage as other people in the community. They need it every day in the week, and develop it by constant practice. They are used to public criticism and are hardened to abuse. They don't care what people think of them. So they are easy prey to men with axes to grind. But how the Lord hates axes grinders!"

Another of the reports hard to understand is that the railroads are reducing their activities and yet suffer from a shortage of cars to handle the freight offered.

Gov. Hughes may not win the presidential nomination next year, but he is getting a line of endorsements that must be very flattering to a new man in the political arena.

The scientists claim to have discovered lately that an atom is divisible. Mr. Hearst, therefore, may still cultivate the idea that his political prospects have a tangible remainder.

Most of the money now supposed to be in hiding will come out this month when the Christmas shoppers enter upon their annual raid. Nothing can be concealed from Santa Claus.

Nikola Tesla is preparing to send wireless messages to Mars. Before worrying over the response the public will want to be assured that the machine has no propensity to kick.

A writer on alfalfa says a farmer can plant it and then "retire from business" with an assured income and no work to speak of. The boys ought to be willing to stay on the farm on these terms.

Gold production in the United States is approaching \$100,000,000 a year, of which nine-tenths is mined in the trans-Mississippi region. This is a good time to dig pay dirt in increasing quantities.

Tons of gold from Europe have been added to the stock of over \$900,000,000, and the American mines are pouring in a fresh supply of nearly \$100,000,000 a year. The panic, if there is such a thing, has a gold lining.

The American people never show the slightest lack of confidence in the financial stability and soundness of the national government. Congress can work along this line and know that it is on solid ground.

Frightened at the money situation, C. J. Atkinson, a laboring man of Tacoma, converted his savings, \$100, into gold, and hid it in his house, which burned down. Next day he was washing the ashes of his house to recover the gold. He found two \$5 gold pieces unburned and one \$20 gold piece melted into a lump.

A Democrat paper, the Brooklyn Eagle puts the case in this fashion: "Mr. Bryan has twice tried for the presidency, with the incidental result of passing from poverty to wealth, and he would now try for nomination for a third time. The Democratic party has become poorer as Mr. Bryan has become richer, and that party is again asked further to enrich him and still further impoverish itself." Democratic testimonials like this are multiplying and getting better.

On November 12, at New York City, M. Revelliers gave an exhibition of his land and water machine, which he has christened Waterland I. After driving the machine for several blocks, much of the distance through soft sand and over boulders, it was forced into the North River, where it maneuvered for some time showing that it was under perfect control. It then pushed through the shallow water and onto the beach, where it proceeded down the road without difficulty. It is claimed that this machine can make fifty-five miles an hour on land and fifteen afloat.

**Sociological.**

Miss Laurence Alma-Tadema, daughter of the well-known artist and author of several successful novels, has come from her English home to lecture in America on "Happiness." When asked by a New York reporter to tell what she meant by happiness, Miss Alma-Tadema said it would take an hour and twenty minutes to tell that, and it had taken her five months to write down what had required years to learn. As to how it could be attained, she is quoted as saying: "By managing one's self, by working hard and developing one's self to the limit. It never comes except by being sought. It is not a matter of condition or of wealth. It does not depend on marriage." Happiness lies in the curtailment of desire. Do without things.

Prof. Emil Muensterberg, head of the public charities of Berlin, was the principal speaker at the celebration of the 25th anniversary of the New York Charity Organization Society at Carnegie Hall Monday night, along with Mayor McClellan, Gov. Hughes and others. Prof. Muensterberg said that charity work had to be undertaken now in "the twilight of widespread egotism and selfishness," but that the work had changed from a purely philanthropic to a social conception. He finds that private charity does in this country the work done by the government in Germany.

Mrs. Spencer Waert, a prominent member of the New Jersey Federation of Women's Clubs, whose country home adjoins the property recently bought to be used by scientists in the employ of John D. Rockefeller as a vivisection farm, has begun a war upon the whole undertaking. She will enlist the various state and national societies to protect animals. In an interview she said: "Stretch John H. Rockefeller out on a table with his hands and feet tied. Somebody take off the skin of his head in order to find 'for the good of science' why his hair doesn't grow. Then he may decide to give his money for better purposes than a vivisection farm where poor animals are tortured in a most agonizing manner."

**When to Go Home.**

From the Bluffton, Ind., *Banner*: "When tired out, go home. When you want consolation, go home. When you want fun go home. When you want to show others that you have reformed, go home and let your family get acquainted with the fact. When you want to show yourself at your best go home and do the act there. When you feel like being extra liberal go home and practice on your wife and children first. When you want to shine with extra brilliancy go home and light up the whole household." To which we would add, when you have a bad cold go home and take Chamberlain's Cough Remedy and a quick cure is certain. For sale by Clough's Drug Store.

**A Dangerous Deadlock.**

That sometimes terminates fatally, is the stoppage of liver and bowel functions. To quickly end this condition without disagreeable sensations, Dr. King's New Life Pills should always be your remedy. Guaranteed absolutely satisfactory in every case or money back, at Chas. I. Clough, Drugstore, 25c.

**Science and Industry.**

The illuminating material known as "liquid gas" was discovered three or four years ago by Hermann Blau, the Bavarian chemist. It is made from oil gas. By a process of rectification the methane and hydrogen contained in it are separated from the gas, and by a pressure of forty atmospheres, are reduced to the liquid form, in steel receivers. The compound can be used in the place of petroleum, alcohol and acetone, and it is said to give a light of a beautiful color, preferable to that of the electric light.

The ice water bath in the treatment of typhoid fever has been largely abandoned for the reason that it was found to be too heroic, the shock frequently resulting in pneumonia. The electric fan is now used as a substitute, and is said to be an entirely successful one. The patient is sponged off with ice water first, then a sheet that has been soaked in ice water is wrapped about the body and more ice water sprinkled on the sheet. The air from an electric fan is then turned on him so that he is chilled by the rapid evaporation caused by the breeze.

A novel proposal is occupying the attention of a special commission of the Paris Municipal Council, in the form of a scheme to construct a series of moving platforms which are to form a circle in the center of Paris underneath the grand boulevards and the Boulevard St. Germain. It is proposed to have three running roadways moving at different speeds. Passengers would step off the fixed pavement to the slow-rolling platform as easy as boarding an omnibus.

To impart the appearance of age to silver, it is sufficient, says the Scientific American, to oxidize the surface. A liquid which will give the characteristic brown coloration to the metal is composed of two parts of ammonium chloride, two parts of cupric sulphate, one part of nitrate of potash, and five parts of acetic acid. When the whole of an object is to be colored, it is to be heated first and then dipped in the bath. But when certain parts only are to be oxidized, a camel's hair brush should be used and the liquid applied at these points.

Scientists never tire of efforts to increase the accuracy of their knowledge of the fundamental facts of science. A redetermination of the velocity of light by the Fizeau toothed-wheel method described in school textbooks has just been completed at the observatory of Nice. The new experiments are remarkable on account of the great distance over which the beam of light employed was transmitted. Previously such a beam had been caused to travel about fifteen miles, but on this occasion the reflecting mirror was so placed that the total distance traversed by the beam, going and returning, was fifty-seven miles. The mean of 1000 observations gave for the velocity of light 186,295½ miles per second.

The convenience of the incandescent electric lamp and the economy of the mercury vapor lamp have been combined in a new German production. Instead of the familiar pear-shaped bulb, the lamp has a U-shaped tube, both ends of the tube entering the brass cup or socket and being held there by plaster of paris. The carbon filament is also of the same shape, and one end is carried into each tube, with the regular leading-in wire; and the loop is anchored at the bottom. When cold a small button of mercury is seen at the bottom of the lamp, but after the filament has been burning long enough the mercury becomes vaporized, and there is thus secured a direct combination of the two methods of illumination.

The very foundation of a fraternal beneficiary society makes individual effort necessary to its ultimate and highest success, says the Michigan Maccabee. Every member of a fraternity is helping himself when he helps the society. Every word that he speaks in its favor, every applicant he secures, every meeting he attends, every sick brother he visits, every part he takes in celebrating picnics and socials, every effort he puts forth to get in the young blood of the country to assist the deputy who may be in his territory, everything that he does, little as it may be, goes to swell the great result. It increases the membership, develops the fraternal and social side of lodge life, reduces the expenses of management and conduct of its affairs, keeps down the mortality rate, and sends the order speeding onward over the highway of progress and success.

**Badly Mixed Up.**

Abraham Brown, of Winterton, N. Y., had a very remarkable experience; he says: "Doctors got badly mixed up over me; one said heart disease; two called it kidney trouble, the fourth, blood poison, and the fifth stomach and liver trouble, but none of them helped me; so my wife advised trying Electric Bitters, which are restoring me to perfect health. One bottle did me more good than all the five doctors prescribed." Guaranteed for blood poison, weakness and all stomach, liver and kidney complaints by Chas. I. Clough, druggist, 50c.

**Here's Good Advice.**

O. S. Woolner, one of the best known merchants of Le Rayville, N. Y., says: "If you are ever troubled with piles, apply Bucklen's Arnica Salve. It cured me of them for good 20 years ago. Guaranteed for sores, wounds, burns or abrasions, 25c. at Chas. I. Clough, drug store."

The Best Hotel.
