DIAMOND THIEVES

the Precious Stones.

SOME TRICKS OF THE TRADE.

Clever Scheme of a Light Fingered Lady Who Worked Nearly Every Dealer In New York - Ingenious Trick of a Smooth Berlin Swindler.

A former State street jeweler who is now a member of a jewelers' protective association and travels over the entire world in search of diamond and gem thieves told some of the interesting methods used by the expert thief to steal jewelry, says the Chicago News.

"Women make good diamond thieves," he said. "as dealers must pot take a chance of offending a customer, lest she be a rich man's wife or daughter whose trade if obtained regularly would amount to thousands a year. Any woman well dressed and possessing a certain amount of refinement can see the entire stock of almost any dealer in the country. When she is clever enough she can get a stone or piece of jewelry during her inspection.

"One New York woman came into a large store and asked to see some unset diamonds. The proprietor of the store waited on her and showed her a large collection of fine stones. She displayed a monster roll of bills and was about to purchase an expensive jewel when she asked whether her husband could see it. 'Why, certainly, replied the proprietor. 'We will send it over to him now.' The woman hesitated and finally asked whether they would hold the stone until that afternoon and she would make a deposit of \$10 on it.

"This appeared perfectly proper to her the one she had been looking at ly do. and at the same time refund her \$10. This was better than a suit and the loss of all the supposed friends of the woman, thought the dealer. She accompanied him back to the store and made her way up to the case where she had stood before and, slipping her hand along the under edge, recovered the two missing atones, stuck there in a little ball of chewing gum.

"The detectives did not know positively at that time whether she had taken anything from the counter, but decided to keep further watch over her. At another store several days later, while she was inspecting gems, a stone was dropped on the floor 'accidentally,' and this also was lost. Gum on the front of the shoe had got this one. The woman was arrested and confessed that she had swindled nearly every dealer in New York with ber gum trick.

"One of the most ingenious thefts was made in Berlin, where a fellow walked into a general jewelry store. knowing the owner had a fine diamond. The thief wore an expensive diamond himself and went into the store apparently to have an old German watch repaired. He started to talk of diamonds and exhibited his own as a choice stone. He was shown the other stone by the dealer. They discussed diamonds in every phase until the watch was repaired, when the stranger started to pay for the repairing. He exhibited a large roll of bills and purposely overpaid. During the slight confusion of counting his money and paying for his watch he had substituted for the genuine diamond a paste stone, which was being carefully wrapped up and placed in its box by the dealer, while the stranger was sauntering out with his watch.

"The dealer saw a slight carbon spot in the paste jewel as he was closing the box and, knowing his own jewel to be flawless, burriedly examined the stone and apprehended the thief before he was half a block away, secure in the thought that he

"He was taken to the store and every particle of clothing removed, and he was searched thoroughly, but the missing jewel could not be found. More through curiosity at the old time watch than anything else one of the police opened the back of the case and found glittering up at him from the mainspring the lost jewel. The thief confessed and got a heavy sentence.

"There are just thousands of this kind of cases," said the gem thief sleuth. "The majority of the really big fellows that I have ever seen are as fine cut men as one would find anywhere. Their personality is usually of the best, but with a bad streak in their makeup somewhere."

Very Considerate.
A tender hearted youth was once present at an Oxford supper where the fathers of those assembled were being roundly abused for their parsimony in supplying the demands of their sons. At last, after having long kept silence, he lifted up his voice in mild protest.

"After all, gentlemen," be said, "let us remember that they are our fellow

He hath a poor spirit who is not planted above petty wrongs. - Feltham RUBBER CANNON BALLS.

A World's Fair Exhibit That Puzzled If They Come Too Near the

An instance of the obsession of the Women Are Experts In Purloining mind by one idea is seen in a luditrous mistake made by Louis Napoleon in 1855 at a world's fair held in Paris while he was emperor. He had been trained to war, and he could not see a strange object without regarding it in relation to war. The head of the United States commission at the exhibition was Maunsell B. Field. who tells in his "Memoirs of Many Men" how greatly disturbed the emperor was by an American invention. The commissioner was present at a

reception held at the palace. "The emperor approached me and remarked that he had that afternoon walked through our department of the exposition-this was just before it was open to the public-that he had seen many things there which interested him, but that nothing had so much pleased him as the exhibition of vulcanized india rubber. Among the articles he had noticed something which had puzzled him ever since. He very much regretted that I was not present at the time of his visit.

"Here I interrupted him to say that I very much regretted it myself and that if he had sent me an intimation of his purpose I should have been certain to attend.

'Well,' he answered, 'in one corner I saw, stacked as one sees them in an artillery yard, a pile of vulcanized in- cally the same volume and would fed dia rubber cannon balls. There was nobody there to answer the inquiries which I desired to make. Perhaps you can explain the matter to me.' "I had not even seen the balls in question and had to say so.

"'I cannot imagine,' resumed his majesty, 'how any preparation of india rubber can be used for projectiles. It has often occurred to me that, in combination with other materials, it might be made useful for defensive purposes.

"I was compelled to admit that it within certain limits by the fossisthe owner, but when she left two val- was equally mysterious to me how the uable stones were missing. The wo- inventor could have thought seriously man was hailed, taken to the police of making cannon balls of it. After so headquarters and searched. The gems unsatisfactory an interview the emperwere not found on her, and in her in- or probably did not think that it would dignation she threatened to bring suit be civil to leave me immediately, so he against the proprietor. He had been asked me if I took much interest in sure she had taken the stones, but in military matters. I answered that I his profusion of apology offered to give did not any more than civilians usual-

"I was at that time residing very near the Palace of Industry. The next morning I went over before breakfast for the purpose of getting information upon the subject which had so puzzled while there, watched by detectives, the emperor. I went directly to the india rubber exhibit, and, sure enough, I found the balls there just as they had been described to me. It was too early for me to expect to see the man in charge, but there was a person in his place. I asked what in the world he expected to do with india rubber cannon balls.

"They are not cannon balls,' he answered; 'they are footballs!' "

The Literary Lady.

In the course of duty and society obligations a senator one evening was a guest at the house of a man noted to the necessary depth and that if it for the number of literary people he | could no recognizable signal could ever gathered about him. The senator had been told that the guests would be either authors or people competent to discuss literature from Confucius down to the present day.

Finding himself beside a middle aged but handsome woman, the senator observed that he supposed she was a literary person. She pleaded guilty and added:

"I think the world of Iridee, and I like Haythorne's 'Red Letter,' and I'm simply mad about Dickenson's works."

The senator has never been able to figure out who Iridee is, but he believes the literary lady meant Ouida .-St. Louis Republic.

One of Nature's Mysteries. The zodiacal light, still one of the unsolved mysteries, has shown very regular pulsations in intensity and form. In a communication to the French Academy of Sciences M. Universal and Eternal.

"Yes, life is universal and eternal, for time is one of its factors-yesterday the moon, today the earth, tomorrow Jupiter. In space there are cradles and tombs. The red carbon stars will soon be dead; the hydrogen stars, like Vega and Sirius, are the stars of the future; Procyon. Copella and Arcturus are the stars of the present. Aldebaran seems to be already an autumn fruit." So said Flammarion.

The Place to Paint.

A party of gunners were painting the guns and wagons of a field battery when a sergeant came up to them. There will be an inspection tomor row," he said. "Be sure you paint all those parts which no one can see, for that's just where the colonel is sure to look!"-London Telegraph.

The Aesthetic Beard.

A man does not properly appreciate the limitations of headgear until he grows a beard. A man with a heard cannot take liberties with his bat .-Outfitter.

Who is able to help is not yet poor; who is able to love is not yet old.

DEEP SEA FISH.

Ordinarily one would think the this, of course it is not n

Take a deep sea fish. Let it stray too high, however, and unit volume and in consequence apa pelled upward at an e creasing rate by the buoyancy of the water until at last it has to be q pelled from the surface of the se with great force. In the meaning the fish has suffered an internal e plosion, as it were, and its eyes bre popped out of its head, and its inside have expanded and made holes in the body. This is why there are no perfect specimens of deep sea fish in any museum. The difficulty could be parly overcome by hauling the 6sh m gradually, but a heavy weight would have to be attached to the line to ore. come the buoyancy of the fish.

On the other hand, take a shallor water fish. It dares not stray too fer down, for the increasing pressure would tend to make it heavier it ! was at all compressible, but as it b not much so it would remain pracno difficulty in propelling itself to almost any depth. The increasing presure, however, would make it harder for the fish to move its organs, and its eyes would be pressed into he

For all these reasons there are well defined strata of water in which certain fish are found and no others. This is one method of determining the depth of a former sea where fossils of fish are found on the land. The depth of the sea at that place can be told New York Tribune.

Newcomb Said the Aeroplane Could Never Be a Success.

Sir Humphry Davy's dogmatic prononncement against gaslighting is not the only instance of a clever scientist being hopelessly wrong. The early history of submarine cabling furnishes two striking examples. Consulted on the scientific side of the project, Faraday asserted that the first cables were made too small. Then he said that "the larger the wire the more electricity would be required to charge it." and in this quite incorrect opinion be was supported by other eminent scientists. As a result of this dictum the current was increased until the operation "electrocuted" the wire and the cable broke down. It was Lord Kelvin who by sending messages through beavy cables with incredibly weak electric currents proved that Faraday was mistaken.

Airy submitted the project to mathematics and arrived at the conclusion that a cable could not be submerged travel from Ireland to Nova Scotia. In aviation the late Dr. Newcomb one of the most distinguished mathe-

maticians the world has ever produced, declared that he had mathematically investigated all the conditions operating against the heavier than air machine and was convinced that the aeroplane would never be any more than a scientific toy, and the possibility of an aeroplane motor being reliable in the reduced atmospheric pressure above 3,000 feet was by several experts said to be out of the question.-Harper's Weekly.

Sour on the Eights.

"Eight cent postage stamps are boodoos," said a postal official. "None of the small offices handle them if they can help it. It's this way: They are just a wee shade different in color from the ones, and it is no infrequent thing for a stamp clerk in a hurry to hand out a lot of eights when ones costs him 7 cents a stamp when be during the rush hour, when the offices lar's worth of ones. He handed out s hundred eights instead. Cost him \$i. Then he got rid of all the rest of the eights, and now he won't have anything to do with eights-even says 'eaten' instead of 'ate.' "-New York Herald

Proper Chills.

"I've had cold chills running over me all day." the thin man complained. You ought to be glad of that," said his heartless friend.

"I don't think I understand rou Why should I be glad?" "Oh. well, you know, it is quite to ordinary thing to have cold chills. There's no cause for alarm. Just think what an extraordinary thing it would be if you should have not chis-running over you."

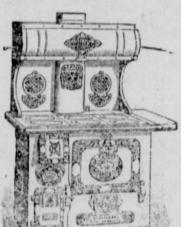

The Modern Way. The prodigal had returned.

"Father," he said, "are you going to kill the fatted calf?" "No." responded the old man, look

ing the youth over carefully-"no: Il let you live. But I'll put you to wark and train some of that fat off for."-Toledo Blade.

One on the Minister. Rev Tubthumer-I've been prese ing this morning to a congregation of asses. Lily Sugaratick-Yes; I noticed you called them "beloved brethres London Tit-Bite
