A FORTUNATE BLUNDER.

The Result of Putting a Couple of Wires In Wrong Terminals.

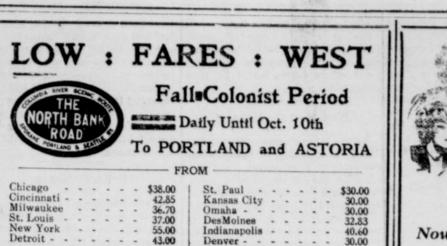

A large number of the world's As confirming the suspicion that greatest inventions have been the ret is our conviction that Mr. Bry- these contributions had their in- sult of some accidental union of does not expect the conservatives fluence on Roosevelt's official acts, forces, the nature of which the person his party to support Wilson with the World cites his assent to the who started them neither understood more unanimity than they sup- steel trust's absorption of the Ten- nor suspected. The working of dyted Bryan, whom they defeated nessee Coal & Iron Company; his namos at long distances apart when properly connected was discovered by accident.

A scientific journal save: "Soon after the opening of the Vienna exposition, in 1873, a careless workman picked up the ends of a couple of wires which he found trailing along the ground. He fastened them in the terminals of a dynamo, to which he thought they belonged, while they were really attached to another dynamo that was running in another part of the grounds.

"The dynamo to which he fastened the wires was not running, but as soon as the wires were placed in its terminals it revolved as if a steam engine was driving it. The workman

was amazed. The engineers and electricians were astonished by the Free trader Wilson multiplies discovery that a dynamo electric mawords to obscure the fact, but he is chine (turned by steam power) would a disciple of Cobden in everything turn another similar machine a long except the courage to avow frankly distance away if properly connected to it by electric wires. Thus origi-Our currency, says Prof. Wilson, nated one of the most revolutionary is stiff, antiquated and inelastic. applications of electricity."

The fact that power can be transmitted for miles by electric wires is one of the most important factors in
