

DEMOCRATIC FREE TRADE.

What the Leading Newspapers Say About It.

No Tariff, no work; low Tariff low wages; a Protective Tariff, protected and prosperous workingmen.

The tardy conversion of the President to the need of a tariff commission would listen better if an election were not so near.

If American industries could speak the first words they would utter would be a request for the return of a Protective Tariff.

Doctored a business with Free-Trade dope is like giving a jaded horse gunpowder to make her snort at the trading post.

If tired of living, take gas, and if tired of means of earning a living, accept the hot-air propositions propounded by the Free-Traders.

The quickest way to restore prosperity and give employment to the three million unemployed is to restore the McKinley Protective policy.

Every cargo of imported goods in this country is an American contribution to the manufacturers in Europe and a robber of American industries.

The Democrats are now wanting to take the Tariff out of politics. It is too late; that's the very thing that will take the Democrats out of politics.

Every man who has no desire to sacrifice his work and wages at home for the sake of foreign goods is advised to fall in love with an adequate Protective Tariff.

Every voter who can tell the difference between a Free-Trade slab and a Protective Tariff plank knows that Taft and Roosevelt are barred from the presidency.

The United States needs a Tariff commission, but there is needed first and still more a radical revision of the present Tariff rates, worked out on a protective basis.

Taking the Tariff out of politics reminds us of the baker who solved the riddle of taking the hole from the doughnut by removing the doughnut. When you take away the Tariff you take away the industry that evokes the Tariff.

Our relations with Mexico and Europe are partisan and cannot be made an issue between the Republicans and the Democrats in 1916. The Republicans will force the fighting for a Protective Tariff and the Democrats will have to meet it.

In 1806 a New England man published a sixteen-page pamphlet enumerating "the failure of the Free-Trade," but it would require as many volumes to chronicle its dismal defects under the present war-tax, income-squeezing administration.

President Wilson's non-partisan policy does not include Protection of American industries, but more than one hundred American taxpayers have suffered from the present administration's Tariff policy to one that has benefited by all of its other policies combined.

President Wilson has taken a new tack. He now declares his belief that "a Tariff board is rendered necessary under the new industrial conditions," and he wants Congress to create such an institution. Sure! Just at this juncture anything is necessary which gives promise of helping Mr. Wilson and his party out of the hole into which they have plunged themselves and the country by their blundering of the Tariff.

From the present indications the President will have to depend largely on the uniform patriotism of the Republican party to sustain the policies he has lately announced; an efficient army and navy, a Tariff that will shut out the flood of pauper manufactures from Europe at the end of the war. This will be no hardship for the Republican party because the newer policies of the President is the Republicans have consistently advocated.

When the war ends the country will find itself confronted with the necessity of raising heavier taxes than usual to meet demands for strengthening its defenses. There is no way in which taxation could be borne so well as by means of the Tariff, and the Democrats are sure to look back with regret to their extreme activity in lopping off duties which were not excessive and provided needed revenue that must now be obtained in other ways.

Four Free-Trade Children.

Mrs. Free-Trade has four children whose names are Little-work, Low-wage, Lean-dinner and Distress. Her policy fattens the laborers of other nations and makes those of her own country idle, moneyless, hungry and poor. She helps the factories of other nations keep up steam and run on full time, and those of her own country to shut down steam and run on half time. She believes in paying high wages for labor in foreign countries and low wages for those in her own country. She is quite a busy old lady and gets everything all turned upside down.

Unworthy to Endure.

No country will endure, and no country is worthy to endure, that will not protect all of its citizens wherever they may be, on land or on sea. Speaker Champ Clark, at Fort Myer. It is also true that no country will endure, and no country is worthy to endure, that refuses to protect its labor, its industry and its business against the unfair competition of lower wages and lower productive

cost in other countries. Wherefrom it follows necessarily, that no political party that will not protect the labor and industry and business of its own country will endure, or is worthy to endure.

What They Do Not Want.

Now that both Democratic and Republican leaders in congress are committed to the passage of legislation creating some sort of a permanent Tariff commission, it is to be hoped that those national organizations, whose energies have been devoted to securing such legislation, will make equal effort to secure the prompt revision of the Tariff along lines that will ensure industrial preparedness against the commercial invasion that must follow the close of the European war. As soon as the smoke of the Tariff commission battle clears away, it will be found that a majority of those whose eyes have been focused upon this objective really wanted adequate Tariff Protection more than a Tariff commission. At all events, it is safe to assert they did not want a Tariff commission that would indefinitely postpone the upward revision of the Tariff to an adequately Protective basis.

Broken Promises.

Gasoline is still going higher in price. In the language of Leslie's we echo, "Where, oh, where is that wonderful chemist in the government's employ at Washington who, six months ago, announced his remarkable invention by which gasoline was to be made cheaper for all time." What has become of this chemist with his remarkable discovery so loudly proclaimed? And where is that other famous chemist who, according to the same alert press agent at Washington four months ago, reported that the dye question had been solved by the government, and that the embargo on German dyestuffs need no longer be feared? Where are these experts that the administration discovered and proclaimed with such wide publicity? Have both of them gone to join that expert demagogue who promised the dear people that he would reduce the cost of living if they would only let him bust the trusts, smash the railroads and wipe out the Protective Tariff.

Unique Heating System.

Whether it is practical or not, the new system of heating for homes devised by a Swedish inventor certainly is the distinction of being unique. It is designed for houses of from four to ten rooms and which is especially intended for localities where electric current is inexpensive. The system consists of two tanks, a motor driven rotary pump and the necessary radiators and piping. One of the tanks is placed in the attic of the house and is thermally insulated. In it are placed the heating units, which, normally, are only operated at night, when the rates for electric current are low. In the morning the heating units are disconnected from the supply circuit and the motor driven pump started. The water flows down the piping and through the radiators by the force of gravity and is collected in a reserve tank in the basement, from where it is pumped out and returned to the tank in the attic.

Sure He Knew Him.

"Where are you going all dressed up," "Over to Danville to a wedding." "Who's getting married?" "Old Bill Onions. Know him?" "Sure I know him. Bill Onions that lives on the Henshaw place." "No he rents the Jones farm." "Big stout fellow?" "I'd call him rather slim." "I don't think so. Had lots of hair last time I saw him." "Cross-eyed, like?" "No so you could notice." "Got a son by his first wife, about 13 years old—tall, skinny boy with funny teeth?" "No. Bill's never been married before." "I guess I know him, though I wouldn't be sure. Who's he marrying?" "Tom Garden's widow. Know her maybe." "Little bit of women with red hair?" "Gosh no; she weighs 200 and her hair's black as coal." "Drives a car, doesn't she?" "I reckon not. I reckon she never rode in an automobile in her life." "Well, give 'em my regards. They'll probably remember me."—Newark News.

AVOID MISTAKES.

No Need for Tillamook People to Experiment with Such Convincing Evidence at Hand.

There are many well advertised kidney remedies on the market today, but none so well recommended in this vicinity as Doan's Kidney Pills. Read the statement of a resident of Hillsboro. S. T. Bowser, veterinary surgeon, Sixth Street, Hillsboro, Ore., says: "I suffered for a long time from weak kidneys. This trouble was due, I think, to constant riding, and change of drinking water. I tried several kidney remedies, but Doan's Kidney pills gave me more relief than all the others. I have recommended them to other kidney sufferers who have used them with good results." Price 50c. at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mr. Bowser had. Foster-Milburn Co. Rops., Buffalo, N. Y.

Furs Wanted.

Furs wanted, highest prices paid. Send for price list. G. D. Alderin & Co. Salem, Oregon.

Piano for Sale.

For sale, a Hollett & Davis piano, in good condition. Inquire of T. P. Johnson, Tillamook, Ore.

WHEN OUR COAL IS GONE.

Water Power Must Supply all Energy—Electricity Must be Used for all Industrial Purposes.

While the demand of coal grows by leaps and bounds the supply is rapidly decreasing. Coal, like the enduring rocks which encase it, is a definite material. It does not grow, like wood. Therefore the supply must be accurately figured.

It is only a few years ago that coal began to be used in large quantities. Before the perfection of the steamboat, the locomotive and the large stationary steam engine the demand for coal was very slight. It was not until after the great industrial development, following the Civil War, that the demand for coal began. Since that day the demand for the fuel has increased by millions and millions of tons.

The industrial growth of the world is due to the substitution of coal energy for the energy of man and beast. And the supply of coal being more or less limited, the casual reader wonders what we will do for power when our coal supply is exhausted. The electrical engineer answers, "Utilize our water power, by changing it into electrical energy."

Coal strata have taken millions of years to form and their total extent is therefore definite and limited. If the present increasing rate of coal consumption is maintained, it seems highly probable that coal will be practical extent in about 300 years. The fields of lignite, peat and other poorer grades of carbonaceous deposits will not begin to meet the fuel demand. Nor will the forests that are rapidly being razed. Science reforestation, however, may supply the demand for the carbon needed in the chemical processes of metallurgy and the arts. The supply of mineral oil and natural gas is also definite.

Utilization of the energy of the waves has been attempted without much success. Wind power has been employed and is capable of greater use where the unreliability of the winds can be compensated for by some energy-storing means. Direct utilization of the sun's heat has been accomplished in a few places with apparent success; it is capable of great development in those places blessed with almost daily sunshine. The greatest hopes for the future, however, lies in the useful development of the energy of water falls and streams. Rivers should be developed not only for minimum flow, but through river control for average continuous flow. At present the entire power demand of the United States is about 37,000,000 h.p. Through the development of all out available water powers we could produce 300,000,000 horse power without using any fuel. Through long distance electrical transmission, the energy developed could be distributed over a wide extended area, thus supplying parts of the country remote from power cities.

National Monuments.

In the steps taken by the present Congress to realize the high representative character of the Lincoln Memorial at Washington the legislative branch of the government honors its debt. Though Congress as yet has done little that is definite, the House, by a vote of 257 to 84, has accepted the proposal of the Senate to increase from \$2,000,000 to \$2,594,000 the limit of cost of the Lincoln memorial under construction on the mall in Patomac Park at the capital. Future visitors to the national capital will see two towering monumental structures so individually distinguished in every way that they will express the deepest aspiration of the people, and their genius for discerning the leadership that stands forth pre-eminently great. The only sculpture on the Lincoln Memorial will be a colossal statue of the president during the great struggle for the preservation of the Union, with two bronze panels bearing his Gettysburg and second inaugural addresses. These utterances contain much that appeals to all men throughout the ages, and no thoughtful foreign reader will miss their import for mankind in its largest sense. Lincoln, like Washington, built on the eternal rock of government by the people of the people, and these two monuments will always reach upward with a prophetic majesty recognized as a power in human affairs that can never be impaired.

Concerning Cannon.

Contrary to the contrary belief, the cannon now in use are no larger in diameter of bore than many which were used a long time ago. A number of ships in the British and Italian navies were armed at one time with 16-inch guns—an inch larger than the largest now in service. The bombardment of Alexandria in 1883 was conducted by guns of that caliber. Four hundred and fifty years earlier still, Mahmud II, battered the walls of Constantinople with guns whose exact bore is uncertain; but if, as was claimed, a man in armor could crawl inside one of them, the diameter of the tube must have been fully equal to that of the giant Krupp mortar of today.

It is in range, firing charge and weight and destructiveness of projectile that the present day gun leaves all previous ones in the infant class. Three or four shells from the 15-inch guns of the Queen Elizabeth would have blown to bits a larger section of the walls of Constantinople than Mahmud beat down in months of firing. The guns used at Alexandria would not throw a missile half the distance that separated the hostile fleets at the battle of the North Sea, and fortifications which could have laughed at the earlier bombardment dissolve in dust at the touch of a 42-centimeter shell.

For Sale.

5 Registered Holstein cows coming fresh soon from a 33 lbs bull; 1 yearling heifer, and 2 yearling bulls.—Jess Fassin, Taft, Oregon.

ROYAL BAKING POWDER Absolutely Pure No Alum—No Phosphate

YAMHILL MILLING COMPANY, Tillamook, Oregon. Made in Oregon Flour. "Oregon Flower," a Hard Wheat Patent. "Yamhill Family Blend," Hard & Valley Wheat. "Morning Star," Select Valley Wheat.

Changes in Foreign Commerce.

The foreign commerce of the United States continues to expand, but there have been some recent changes in character that attract attention. One striking feature is the value of imports, which reached \$1,778,596,695 for the calendar year 1915. The percentage admitted free of duty was 65.64 for the year. For the month of December it was 71.92. In January, 1916, the imports free of duty amounted in value to \$135,807,220, while those dutiable were of the value of \$48,385,079. The total imports were approximately \$30,000,000 more for January 1916, than for January, 1914, under the Underwood act, before the war, but the dutiable imports were \$12,000,000 less. This shows why the treasury is suffering so.

The total exports for December amounted in value to \$359,306,492, which was approximately \$14,000,000 more than for December 1914. But there was a surprising decrease in exports of foodstuffs. These comprised 21.45 of the total for December 1915. Exports of breadstuffs fell off for the month from \$57,207,429 to \$34,941,657. The most striking increase was in explosives, from \$2,170,387 in December, 1914, to \$46,053,377 in December, 1915, most of this being powder and unclassified explosives. It is evident that Europe is finding a new food supply. Some is coming from Canada, some from Australia, some from India and some from Egypt. It is also probable that every available acre is being tilled in the countries involved in the war. It is also clear that heavy deliveries of munitions of war are being made, a fact which may have its bearing in the submarine controversy.

Notice of Sheriff's Sale.

The undersigned, Sheriff of Tillamook County, Oregon, will on Monday, the 3rd day of April, 1916, at the hour of 10 o'clock a.m. at the Court House door in Tillamook City, Oregon, sell at public auction to the highest bidder for cash in hand, the following described real property situated in Tillamook County, Oregon, to-wit:

Lots thirteen (13) and fourteen (14) of Section two (2) in Township two (2) South of Range nine (9) West, W. M.

For the purpose of satisfying a judgment rendered in decree of foreclosure in case of J. H. Ellison and Ellen Ellison plaintiffs vs. George Vanderveer and May Vanderveer, defendants, in the Circuit Court of Tillamook County, Oregon.

Said sale will be made in pursuance of an execution and order of sale issued in pursuance of the decree in said case.

Dated this March 2nd, 1916. H. Crenshaw, Sheriff of Tillamook County, Oregon.

Notice of Hearing of Final Account.

Notice is hereby given, that on the 6th day of August, 1901, Nancy N. Smith, filed in the County Court of the State of Oregon, for Tillamook County, her final account as administratrix of the estate of William Smith, deceased, and that said court has appointed April 3rd, 1916, at 10 o'clock a.m., at the court room of said county, in Tillamook City, Tillamook County, Oregon, as the time and place for the hearing of any objections to said account and the closing of said estate. Dated February 17th, 1916. Charles Edwin Dondaldson, Administrator of the Estate of Amanda L. Dondaldson, deceased.

MANY OREGON WOMEN SAY THE SAME.

Portland, Oregon.—"My daughter's health was very poor after her first baby came. Finally she took three bottles of Dr. Pierce's Favorite Prescription and her health was greatly improved. She has three children. Has always depended on this wonderful medicine to help her through."—MRS. ISABEL BERTRAND, 86 Texas St., Portland, Oregon.

NOTE: Dr. Pierce receives, daily, many letters like the above from all over the world.

The mighty restorative power of Dr. Pierce's Favorite Prescription speedily causes all womanly troubles to disappear—compels the organs to properly perform their natural functions, corrects displacements, overcomes irregularities, removes pain and misery at certain times and brings back health and strength to nervous, irritable and exhausted women.

What Doctor Pierce's Favorite Prescription has done for thousands it will do for you. Get it this very day from any medicine dealer, in either liquid or tablet form.

Doctor Pierce's Pellets are unequalled as a Liver Pill. Smallest, easiest to take. One tiny, Sugar-coated Pellet a Dose. Cure Sick Headache, Bilious Headache, Dizziness, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels.

O. I. C. SWINE

I have some choice fall boars and gilts that am making a special low price to make room for my spring pigs. Can supply you with spring pigs of either sex unrelated.
