AGRICULTURAL NOTES. By R. C. Jones, County Agricultrist.

Prune and Spray Roses Now Several inquiries have come to this office regarding the control of diseases that are attacking the rose bushes about the county. A letter to the Plant Pathology Department of O. A. C. brought the following reply as to diseases and their control:

"The climate of Western Oregon is ideal for the growing of roses, there are certain diseases which mar the attractiveness and stunt the growth of the bushes. The two most important of these are the powdery mildew and black spot, which may be kept under control by proper spray-

Rose Mildew is widely distributed and very common, attacking many varieties but causing the greatest inry perhaps to the crimson rambler. This fungus forms a dusty white growth over the surface of the leaves and young shoots. It causes the leaves to curl and remain small and thecks their normal function. The itality of the bushes is greatly reuced and the stems may be destorted while the bloom may be prevented

om normal development, Black Spot of the rose in another adly attacked. The fungus causing the disease produces black spots, more or less circular in outline with a margin appearing to be fringed. The spots are sometimes, separate, but they often unite so as to cover a large from \$98.00 and up. part of the leaf surface. Severe atacks cause premature falling of caves.

Control. Before the time when new growth starts in the spring the have fallen to the ground, should removed and destroyed, since these old leaves carry the disease over from one season to the next in the case of black spot.

Just after growth starts in the and demonstration free. See me. spring and while the leaves are still small spray with lime-sulphur solution covering all parts thoroughly. This solution should be used in a proportion of one part of the concentrated material to about 25 parts of water.

About a month after the first application, the bushes should be sprayed again to cover all the new foliage that has developed in the meantime, using solution of lime-sulphur one to forty

Following this application, to insure the best results, lime-sulphur I to 40 should be applied about every two weeks until blossoming time, after which very little trouble will probably make its appearance unless the season is very moist or the disease is bundant on other bushes in the eighborhood Caution. Where roses are growing

against painted houses, lime-sulphur solution should not be used on acount of its tendency to discolor the paint. For black spot, ammonical cop-per carbonate can be applied at frequent intervals as a substitute, and for he mildew sulpher dust can be used." The concentrated lime-sulphur soluion can be obtained from local drug stores or from the Tillamok Feed Co.

Public Employment Bureau communication from the Public ment Bureau, operated by the city of Portland and the U. ernment, states that they will be glad to hear from any farmers in county who are in need of help. Last year they supplied over 8000 workers to the farmers of Oregon and Washngton. The service is free. If you have not sufficient help, drop them a line and they will supply you,
