

The HARTFORD'S Greatest Service is the Prevention of Fires

A policy in the Hartford Fire Insurance Company means to a large degree insurance against fire. Insurance against fire is a very different thing from fire insurance.

Naturally you want both. You do not want a fire at all if it can be avoided. If you do have a fire, you want the insurance money paid promptly and fully. The Hartford doesn't want a customer who does not consider a fire a great calamity, even when fully insured. It wants to insure only the man who takes out fire insurance as a precaution for the worst, and who will cooperate with the company and its agents in keeping the worst from happening.

Any agent or broker can get you a policy in the **HARTFORD FIRE INSURANCE CO.**

A Famous Trio of Holstein Cows.

The time will come when Tillamook County, the natural home of the dairy cow, will be as noted for pure bred cattle as for its famous cheese. In less than ten years the breeders of this county will make such advancement in their pure bred cattle that buyers for this stock will be leaving large amounts of money in this county for purchases of pure bred stock.

If there is one state in America that is making a bold and successful bid for honors in the Holstein-Friesian cattle breeding industry, it is Iowa. Within the past year remarkable records both for short and long-time tests have been reported from the leading Holstein farms in this State, and while the making of 40-lb. 7-day butter records is not all that a dairy cow is expected to do, yet the fact remains that for one cow to produce milk containing sufficient fat to make over 40 lbs. butter in one week entitles that cow to the honor of being classified among the great cows of the breed.

The first Iowa cow to make an official 7-day record of over 40 lbs. butter is Nancy Lucy Hengerveld 277796. She is owned by D. C. Maxwell, proprietor of the Maxwell farm, Waterloo, Iowa, and is a product of the well known and successful breeder of show-ring winners, Robert E. Haeger, of Algonquin, Ill. "Nancy" is a daughter of Woodcrest Hengerveld De Kol 46514, (son of the first century sire of the breed, Hengerveld De Kol), with 48 A. R. O. daughters and several proven sons to his credit. Her dam is Nancy Spofford 61336, an A. R. O. cow of show-ring fame; and a grand champion at many state fairs, and six daughters and six sons in the advance registry.

Nancy Lucy Hengerveld made her record of 620.2 lbs. milk, 40.25 lbs. butter at 6 years of age. She has 8 half sisters, all by the same sire, in the Maxwell farm herd, and three of them have made over 30-lb. butter each in 7-day tests. Mr. Maxwell is an admirer of beauty in dairy cattle, and in the herd of over 100 Holsteins will be found a preponderance of handsome individuals, who are also producers of the best type. "Nancy" is but the first high record cow to be reported from this progressive Holstein farm, which under the supervision of C. C. Beebe, is already becoming one of the most noted dairy cattle breeding establishments in the country.

With the big record season in full swing it was not at all surprising that the challenge of the Maxwell farm had been accepted, and the 7-day honors wrested from Nancy Lucy Hengerveld, though only by a very

small margin. Miss Pieterje Alexina 2nd 196788, another six-year Holstein, owned by Messrs. Hargrove & Arnold, of Norwalk, Iowa, was the second cow in the state to pass the 40-lb mark. Her milk production for 7 days officially reported as 662 lbs., containing 32.464 lbs. fat, equal to 40.58 lbs. butter. Since these figures were announced she has increased her record to over 42 pounds. "Miss Pieterje" was admitted to the Advanced Registry at 1 year, 11 mo. and 24 days, when she produced under official test 321 lbs. milk, 41.017 lbs. butter in 21 days. A year later she made a record of over 16 lbs. butter from 299.8 lbs. milk, her first test showing 4.29 per cent. When 4 years of age she produced 428.3 lbs. milk (3.89 per cent fat) 20.82 lbs. butter, coming back at 5 years with 30.156 lbs. butter and finishing the year with a total production of 24,219 lbs. milk (testing 4.26 per cent for the whole year) and 1,290.93 lbs. butter. Only ten other cows of the breed have produced more butter fat in one year, and only two other cows have made 40 lbs. butter in 7 days and over 1200 lbs. in one year. Miss Pieterje Alexina 2nd was bred by M. & W. E. Timmerman, of Ft. Plain, N. Y., and she is a daughter of Pledge Concordia 586660 out of Miss Pieterje Alexina 157159, an A. R. O. cow with a 7-day record of 17.39 lbs. butter.

If Miss Pieterje Alexina 2nd is to be considered one of the great cows of the breed what then must be said about Lady Mutual Friend 118829, one of her stablemates, whose record of 41,908 lbs. butter from 661.8 lbs. milk is even more remarkable, taking into consideration that she is considerably over ten years of age. Lady Mutual Friend is certainly a very remarkable cow as her record as a producer and reproducer will prove. During her verification test which covered a period of two days she produced 9,737 lbs. fat from 189.43 lbs. milk, this being equivalent to a little over 12 lbs. of commercial butter in 48 hours. No other cow has a record of producing over 40 lbs. butter in one week after having passed the age of ten years, and it is hardly possible that there is another 40-lb cow that is the mother of twin daughters, each having 7-day butter records of 34 and 32 lb. A junior 2-year-old daughter of this great great cow has made a 7-day record of over 21 lbs., and over 900 lbs. butter in a year; there are two other daughters making exceptionally good records, and still another one that will be heard from in the near future. Messrs. Hargrove & Arnold have seven daughters of Lady Mutual Friend and also a full sister, so that the prospects of this family becoming one of the greatest of the

bred, are very favorable. It is worthy of mention that Messrs. Hargrove & Arnold made fifteen 30-lb records during the past year, and practically all the cows that made these records were kept under test for the full year. Seven of the fifteen made over 1,000 lbs. butter during the year. These splendid records of production in long-time tests are an assurance that the management of this noted Iowa herd is in good hands. While the short time record is valuable, there is a growing demand for dairy cattle capable of maintaining a steady flow of milk throughout the year, and Iowa is certainly doing her share to prove to the dairy world that the Holstein-Friesian cow is in the lead.

Shall the Public Schools Be Used for Propaganda?

The right of a teacher in the public schools to use her rostrum for political or economic propaganda is involved in a fight against the suspension by the school board by the city of Washington of a teacher of English who has been treating her pupils to radical political views.

If the public schools are not to be wrecked they must be freed of all politics, economic and religious propaganda.

The citizen who is required to pay taxes to support schools in order to have some opinionated teacher thrust partisan arguments upon his children has a cause of grievance which perhaps would stick in the courts. One thing that is ailing Germany is the use of the public schools for propaganda. Let the propagandists go and hire a hall or start a newspaper or take to a soap box. To take the people's money for the purpose of giving instruction in facts and then to use the time carrying forward some private or party or class or other agitation upon a conscripted audience afraid to talk back is a fraud on the public.

There is a wide spread, organized, powerful movement to prostitute the public schools of the country to economic and political propaganda. It is reflected in text books, school papers and in the partisan views handed out by many teachers. The schools should not be used for Republican, Democratic, Socialist or any other sort of propaganda.

The text book in "English" used in the District of Columbia high schools is almost entirely a compilation of President Wilson's speeches and messages. That was a fair start on the school room politics that has brought protest from the school patrons who object to having their children taken over by those who happen for the time being to control the schools.

The National Republican urges its readers to be on the watch for evidences of this nation-wide movement to make the schools safe for partisan Democracy and socialism, or for any other sort of political or economic "ism,"—even Republicanism, to bawl it out locally, rid the schools of those responsible for it wherever possible, and report the facts to this paper for ventilation. This abuse is getting beyond the point where it can be dealt with patiently.

Law Says, Kill Squirrels.

"Kill 'em." That's what the law says every land owner, renter, or overseer must do with the squirrels that infest the land over which he has dominion. Unless said owner, etc., "shall proceed to continue in good faith to exterminate said ground squirrels," the county court is empowered at the end of 30 days to hire the work done and charge it to the owner, the land being taken as a lien.

The best way to kill the squirrels is to feed them poisoned grain, says George W. Kable, county agent of Benton. Since squirrels feed early in the morning it is best to scatter the poisoned grain late in the evening or early in the morning. As prepared by Benton county the poisoned barley is safe to handle but must be kept away from children and livestock. It is not an effective rat poison but is sure death to field mice. Mr. Kable says the poisoned grain is best carried in "a flat whisky bottle, if you have one of these relics of former times."

For Bilious Trouble.

To promote a healthy action of the liver and correct the disorders caused by biliousness, Chamberlain's Tablets are excellent. Try them and see how quickly they give you a relish for your food and banish that dull and stupid feeling.—Adv.

If I Were a Farmer.

If I were a farmer I would keep at hand a few reliable medicines for minor ailments that are not so serious as to require the attention of a physician, such as Chamberlain's Colic and Diarrhoea Remedy for bowel complaints.

Chamberlain's Cough Remedy for coughs, colds and croup.

Chamberlain's liniment for sprains, bruises and rheumatic pains.

By having these articles at hand it would often save the trouble of a trip to town in the busiest season or in the night, and would enable me to treat slight ailments as soon as they appear, and thereby avoid the more serious diseases that so often follow.—Adv.
