At the time of the reconstruction work in the devastated coal region about Lens, France, the French were taught by several disasters that the retreating Germans, before flooding mines, had concealed along the walls unnumbered "hooby traps," says Popular Mechanics. Consequently, in order that the divers, charged with preliminary inspections, may "look before they leap," the government recently purchased from England an interesting apparatus for submarine photography. Lowered down the flooded shaft, this apparatus illuminates a ten-foot zone; then, as switches are pressed at the mouth of the shaft, it photographs simultaneously each of the four walls.

The Best Thing He Did.
A melancholy looking man entered the establishment of a photographer. "I should like to have a picture of myself weeping beside my wife's grave," he explained.
"I fear I have not the necessary accessories here," said the photographer. Then he added, facetiously, "Couldn't we arrange to have the portrait made at the grave itself?"
"No," said the man; "that's in New York state. It would be too expensive to go there. Just you fix up some kind of a grave here in the shop. I could weep on that. It's no trouble for me to weep anywhere."--Everybody's Magazine.

Revised Version.
Little Bert had been to Sabbath school by himself. When he returned his mother tried, rather unsuccessfully, to find what he had learned. But all she could elicit after much questioning was that his teacher said Jesus was going to send him a quilt. That he insisted, was all they learned.
When mother consulted the Sunday school quarterly, she found the golden text for the day was:
"Behold, I send you the Comforter."

Washing Machine Activity.
Next to the automobile manufacturers, the makers of washing machines are now the greatest consumers of copper. The utility companies, which in normal times are large users of copper, cannot buy much now because they can't get the money. But washing machines are being turned out by thousands, in an effort to meet the shortage of labor, and copper enters largely into the construction of most of the washing machines.
