OREGONIAN versus PEOPLE: Under a heading, "Bad Business", the Oregonian has an editorial in its issue of February 4th relating to the Roosevelt Military highway bill now pending in the state legislature.

The bad business referred to evidently means bad business for Multnomah county, for the Oregonian fails to see where Portland and Multnomah county will derive any special benefit from the passage of this measure.

In both editorials and news items the Portland daily has attempted to instill into the minds of the legislators that the voters of Oregon are against the highway bill and that it should be killed.

In May 1919 the voters of Oregon showed their willingness to expend \$2,500,000 for the construction of a road through the coast counties that could be used, if need be, for military purposes.

But nothing must interfere with the well-being of the Multnomah Empire, long may she live, and if passing the Roosevelt highway bill takes some of the money Portlanders want for roads, the coast counties can "go hang".

The Oregonian speaks of the probable cost of the undertaking as around \$10,000,000. This is pure rot. Consideration must be given to the fact that most of the proposed highway is already laid out and a great amount is already completed.

Senator Norblad's bill preventing trolling for salmon in any Oregon waters north of Tillamook Head practically means that no trolling would be allowed any place but in Clatsop county if the bill should pass.

Some of our local merchants have been crying for months, attempting to get lower insurance on business property. They are obsessed with the idea and mention the subject whenever a chance is offered.

The common council of any city has a solemn duty. They are elected from their precincts by the people to legislate and enforce the municipal laws for them, and they are elected for the reason that they are the ones thought best qualified to perform such duties.

It is quite noticeable that the condition of some of our county roads outside of the main highways is not the best. Tourists travel should not get all the consideration.

In spite of the weather Spring is almost here and it is time to start a clean-up campaign.

14-YEAR TESTS OF PLANT LIFE

Reveal That Wild Flora Do Not Always Grow in Most Congenial Habitat.

ENVIRONMENT IS CHANGED

Flowers Taken From Mountain Tops Grow Much More Luxuriantly and Produce More Leaves, Flowers and Fruit at Sea Level.

Chicago.—At a lecture given before an assemblage of geographers and biologists representing several societies, Dr. D. T. MacDougal, director of the Botanical research department of the Carnegie institution at Washington, described the results of a series of experiments extending over fourteen years and embracing 139 species of plants.

"A great many people think this," said Dr. MacDougal, "but it has been found to be absolutely false."

With stations established at four different altitudes, 8,000 feet, 5,200 feet, 2,300 feet and at sea level, plants have been transferred from one place to another, and the results of the cultural experiments of fourteen years have now been compiled.

Grow More Luxuriantly.

In these experiments plants from the mountain tops, some from a height of close to one and one-half miles above sea level, were found to grow much more luxuriantly, producing more leaves, flowers and fruits at sea level than they had in their native habitat.

One hundred and thirty-nine plants were used in these experiments, embracing forms of such wide divergence as grasses, wild lilies and oak and walnut trees, as well as cacti and other unusual plants.

"While a plant may thrive well in its new situation," said Dr. MacDougal, "it will sometimes display a behavior quite at variance with that which it is ordinarily known, thus the common witchhazel, which is known to bloom in the vicinity of New York when the frosts come, when taken to the equitable climate of the Pacific coast reverts to the normal or summer-flowering habit.

"Aquatic plants of the cross family were made to grow in soil on the mountain tops, where the roots formed small redishes, like their relatives. The radish is a cross. In other words, these plants came back to the normal habit of forming a radish.

"The manner in which plants travel about the world is distributed in a problem of great interest to biologists, and in this experimental work particular attention was given to obtaining evidence on some of the problems of dissemination or movement of plants across the face of the country."

It was found that rabbits and rodents which inhabit the oak zone at the top of the mountain range acted very effectively as a barrier to prevent cacti and other plants from moving up or down the mountain slopes. To verify this a barrage zone was established and the plants protected in screened enclosures which kept off the little nibbling animals.

The coastal laboratory at Carmel-by-the-Sea and the desert laboratory at Tucson, Ariz., are two of the experimental stations which were used in this work.

FIND WRIGGLING EEL MINE

Steam Shovel Lifts Them Out by Hundreds From Wharf Site at Plymouth, Mass.

Plymouth, Mass.—Digging out eels in hundreds of pounds with a steam shovel is a novelty introduced here.

The steam shovel used by the contractor for the removal of Pilgrim wharf in the changes being made along the waterfront where the Plymouth Rock reservation is being made did the trick. Digging is being made with a grab bucket near low water mark at the outer end of the pier.

The bucket arose once with a full cargo, nearly a cubic yard, of squirming eels, some of which weighed four pounds apiece. Fishermen say the eels had bedded in the mud beneath the wharf for the winter, and this accounted for the eel mine.

Misses the Old Rail.

Louisville, Ky.—The old brass rail which for years had stood at the Anshoff hotel bar was recently removed, but John Keating, seeking a soft drink, didn't know it. He reached for it, slipped, fell, and broke his leg.

NOTICE

Bids will be received for the hauling of cheese and supplies to and from the Maple Leaf Creamery, 2 miles north of Tillamook City, for the year 1921. All bids must be presented at the office of Carl Haberlach, secretary, before noon, Saturday, February 19th, 1921.

Adv. CARL HABERLACH, Sec.

OWN GAS KILLS HIM

Chemist Commits Suicide Under Dramatic Circumstances.

Pays All Debts and From Remaining Stock of Chemicals Mixes Compound to Generate Gas.

London.—Composing his own lethal gas, Constantine De Moreschewsky, a chemist and botanist of international repute, former professor in the University of Petrograd, committed suicide in a Geneva hotel under dramatic circumstances.

Moreschewsky escaped from Russia with a small fortune, which was hoarded after two years' residence in Geneva, where he continued his research work and wrote a number of scientific books. When his funds were low, he was too proud to appeal for help, though in view of his high standing he could have obtained a handsome subsidy to pursue his studies from scientific associations in America, France and England had he stooped to solicit aid.

He preferred to die. He scrupulously paid all his debts and then from his remaining stock of chemicals mixed a special composition which he poured into a receptacle, to which he attached a tube.

At the other end of the tube was a mask which he placed over his face, and then binding himself to the bed released the gas which was given off from the composition. He died from asphyxiation. Firemen had to wear smoke helmets to remove the body from the room.

26,869 ALIENS IN SHANGHAI

Entire Population Estimated at More Than 2,000,000—No Census of City Taken.

Shanghai.—A quinquennial census taken in October in the French concession and the International settlement gives Shanghai a foreign population of 26,869, according to official returns.

A census of the entire city, native and foreign, has never been taken, but careful estimates place the population at more than 2,000,000.

The International settlement has a foreign population of 23,307 and the French concession 3,562. In the two concessions the Japanese lead in point of numbers with 10,521. British are second with 6,285, Americans third, 2,813, and Russians fourth, 1,382. There are 846 Frenchmen in the two districts.

The International settlement has 25 known different nationalities, with 15 of undefined nationality. The German population, which in 1915 totaled 1,155, has dwindled to 280.

CONQUER YANGTZE RAPIDS

Hydroslide to Be Used to Effect Navigation Beyond Gorges in Chinese Stream.

Shanghai.—By means of the hydroslide, which the British used successfully in Mesopotamia during the war, another effort, and one wholly novel to China, is to be made to conquer the rapids of the Yangtze gorges.

At places there the current attains a velocity of more than thirty miles an hour. The ordinary head of navigation for steamers on the Yangtze is at Ichang, a thousand miles from the coast, but Szechuen, China's most populous province, and one of its richest, lies nearly four hundred miles farther up the river, beyond the wild bandit-ridden country of the gorges.

The use of the hydroslides on the upper Yangtze is the enterprise of a French company with headquarters in Shanghai. A number of these craft were sent up the Yangtze from Shanghai in December for trial runs.

MILUKOFF GIVES UP LIBRARY

Former U. of C. Professor Presents His Russian Collection to Stanford University.

Stanford University, Cal.—Prof. Paul Milukoff, Russian secretary of foreign affairs after the revolution of 1917, and formerly a professor at the University of Chicago, has presented to Stanford university his private library on Russian history, said to be one of the most complete collections in existence. It was announced.

The bulk of the library was collected while the donor was professor of Russian history at the University of Moscow. It had been in storage for six years in Helsinki, Finland, whence it was shipped December 2 to this country.

WOMEN TALLER AND HEAVIER

Increase in Stature and Weight Attributed to Outdoor Life by Athletic Director.

Philadelphia.—Women are growing taller and heavier, according to Dr. R. Tait McKenzie, director of physical education at the University of Pennsylvania.

"Statistics of women's colleges covering a period of 60 years show the average college girl of today is an inch taller than the college girl of 1860," he said. "These statistics also prove the modern girl is six or seven pounds heavier."

Dr. McKenzie attributed this increase in stature and weight to the increased interest in sports and outdoor life.

REBEKAH BUSY BEES

"The Rebekah Busy Bees" meet every Tuesday afternoon in the I. O. O. F. hall for the purpose of getting acquainted and being comforted. All Rebekahs are not only invited, but are requested to attend and any sister Rebekah from neighboring lodges will find a hearty welcome. Come and join in our circle and Tuesday afternoon.—Committee

TO SAVE FISH ALONG COAST

Pollution of Water and Catching in Nets Is Cause of Serious Condition.

NEW JERSEY STARTS MOVE

Experienced Fishermen Say That Supply of Migratory Fish Has Been Seriously Depleted—Other Seaboard States Are Sufferers.

Newark, N. J.—A movement has been started in New Jersey to save from extermination the migratory fish which spawn in one place and move along the Atlantic coast with the changing of the seasons—such as mackerel, menhaden, herring and numerous other varieties peculiar to certain localities on this coast. Experienced fishermen declare that the supply of these migratory fish has been seriously depleted by the pollution of the areas in which they spawn and by the reckless manner in which they have been caught in nets.

The method proposed by the New Jersey Fish and Game Conservation league to prevent from extermination is to induce the United States government to take control of and regulate the catching of these fish and stop pollution of the spawning areas. It is contended that only in this way can the increasing cost of fish food to the consumer be checked or reduced.

Four Fundamental Points.

The four fundamental points in the New Jersey league's proposal for national legislation are:

Protect spawning areas against pollution. Regulate the size of the meshes of nets so the immature fish cannot be caught.

Protect the natural food supply of edible fishes.

The fourth point has to do with one of the most perplexing phases of the salt water problem—the matter of the menhaden industry. The menhaden, otherwise known as mossaunker, which once swarmed along the coast in incalculable numbers, attracting hordes of edible fishes that preyed on them, have been slaughtered right and left to produce oil and fertilizer. In the view of experts their end is not far off, and by their passing will disappear from Atlantic coastal waters many of such edible species as now remain.

Fisheries Board Breaks Down.

Efforts to cope with the problem through state regulation here have failed utterly, the last straw being the complete breakdown of the state board of fisheries, which had been created by legislative enactment with a view to increasing the supply of food fishes and reducing the cost to the consumers.

The five members of the board resigned in a body in July, 1919, and there have been no reappointments.

Investigation by a committee of veteran coast men disclosed an equally deplorable condition. It was learned, also, that fisheries officials of Connecticut and Maryland agreed with those of New Jersey that a federal law was the only remedy.

INTERNAL ORGANS MISPLACED

Hospital Patient in Vermont Has Heart, Liver and Stomach on Wrong Side.

Rutland, Vt.—William Bowen of West Charleston, Vt., twenty-six, a patient at the Vermont sanitarium in Pittsford, is a curiosity to the medical world.

All his internal organs are on the wrong side. He has tuberculosis, but this has nothing to do with the misplaced organs.

The transposition was discovered when an x-ray picture was taken by Dr. Clarence T. Ball here to determine the condition of the lungs. It had been known that Bowen's heart was not in the customary place, but the x-ray showed the stomach on the opposite side, the liver on the left instead of the right and the vermiform appendix on the left.

Bowen is expected to recover from tuberculosis.

French Baby Has Heart in Pouch Outside Body

Paris.—Paris medical authorities were called to Soissons to examine an infant born to a working family with heart and intestines contained in a pouch on the outside of the child's body. The case was said to be the first of its kind on record. There is every indication that the child will live, as all the organs are functioning perfectly despite their displacement.

Gas Well Rests on Sundays.

Sharon, Pa.—A "religious" gas well which does not produce on Sundays is owned by the Champion Oil and Gas company of McKeesport.

The well produced gas every day during July, except on the four Sundays, according to a report made by Sigmund Josephthal, secretary-treasurer of this company, addressing a meeting of stockholders here.

Tillamook Stage Line

CADILLAC CARS Leaves Tillamook Daily at 8:00 A. M. and 12:30 P. M. Leaves Portland (Hoyt Hotel) daily at 8:30 A. M. and 1:00 P. M. Makes connections with Rockaway Stage Line. Cars are warm and comfortable

IF YOU WANT TO BUY OR EXCHANGE poultry let us know. We also have setting eggs and baby chicks of 25 varieties for sale. Send in your order soon. John Hofman, Tillamook. 1-2710

SHELTER COVE HOMESTEAD to be sold. The undersigned will sell my homestead of 160 acres, part of it cleared and in grass, the other in small brush such as vine maple, bear berry, salmon berry and a few scattered alders, very easily cleared. Fern and logs very few. There is a home, barn, orchard and good meadow. Accommodate 12 or 15 head of cattle. There is also 10 or 12 tons of Chittom bark on the place. This place lies in a cove, surrounded by high mountains east, north and west; facing the south; the warmest and most sheltered place in Tillamook County, so dense the name of Shelter Cove serves the name of Shelter Cove. The land can't be beat, will grow anything; some of it as good as river bottom. Part of it can be irrigated from the creek that runs through the place, which supplies water all through the summer. If you are looking for a good and cheap place, here is a chance. For further information apply to owner on the place. Manuel

What is that old story about going to sea in a peanut shell? Almost the same thing here, only a brass kettle takes the place of the peanut shell. In some parts of India this conveyance is used by travelers for fording shallow streams. The mystery about the pictures is to find the man's legs. Are they sticking through the bottom of the pot or has he in some unexplained manner been able to double them up under him? It's a curious puzzle.

FOR SALE—THE LILLY BROOK

Stock Farm. 60 acres of the finest Tillamook Dairy land, located 1 1/2 miles from Tillamook City on Wilson river. Paved road to town. Barn stanchioned and piped to milk 30 cows. Four box stalls for testing cows. Good milking machine, new. Nine room two-story house, modern dutch kitchen, all good outbuildings. Hot and cold water in house, barn and milk house. Good berry gardens and orchard. Land is on one of the best fishing rivers in the county and is some of the best land in the state. Income for 1920 was \$6500. Price \$3,000, one-third cash, balance terms. See L. D. Smith, owner, Tillamook, Oregon, R. 1, Box 22.

FOR SALE—160 ACRE RANCH near Boardman, Oregon. 120 acres improved, 100 acres in alfalfa, 40 acres leveled. New rabbit-proof fence now around half. Buildings and implements included. 1/2 mile from town on good road. Must raise money and will sell cheap. Inquire Headlight office. 2-31f

FOR SALE—FIFTEEN GROSS Soda pop bottles, all in good condition. Will sell part or all, 25c dozen. Inquire Headlight.

FOR SALE—EVERGREEN BLACK-berry plants \$20.00 per thousand. Also two-year old loganberry plants \$75.00 per thousand. Jud Foster, R. D. No. 2, Dallas, Oregon. 2-314c
