

CLARITY IN NIGHT THOUGHTS

Brain is Frequently at Rest During the Still, Quiet Hours of the Dark-ness.

Many writers sleep with pencil and notebook under their pillows and a lamp at hand, so that they may dash off the thoughts that come to them in the watches of the night. There is about these thoughts a clarity that does not come with daytime thinking—a sureness of vision that approaches the clairvoyant. Misfortunes never loom so full or realistic as after midnight; but joy and pleasure lose something of their glamor, their evidence; doubt creeps in with them.

A problem which we have wrestled in the daylight, weighing it with all our intelligence, is settled in a certain way, calmly and judiciously and after mature reflection. Our decision seems the right one. And then, suddenly, in the dead of the night, that selfsame issue bobs up before our mental vision, wakes us from a sound sleep and settles itself in quite another way, in one great flash. A strong white light has been turned upon the brain and has revealed there a conclusion of which we had no inkling before. The processes of arriving at it are a closed chapter. The clairvoyant brain has registered a result only. And again and again it will be found to be the right, the expedient solution.

Memory, too, is peculiarly keen in the silences between midnight and four in the morning. All the cobwebs have been swept from the brain by the first hours of sleep; the body and nerve centers are singularly rested; there are no noises to disturb and some subconscious power is at work within us.

THAT LUCKY RABBIT'S FOOT

Must Be Procured Only Under Certain Circumstances if the Charm is to Have Power.

You have undoubtedly heard about wearing a rabbit's foot for luck. Do you know what is the significance of it, where it is to be carried, and why it is lucky? Well, here it is:

"The rabbit's foot is esteemed a powerful talisman to bring good fortune to the wearer and protect him from all dangers," says an authority. "As this belief is more or less common throughout the South it may be well to state how the charm is prepared, for the benefit of those who wish to put on the royal road to health, wealth and prosperity.

"It must be the left hind foot of a graveyard rabbit, and that is one caught in a graveyard, although one captured under the gallows would probably answer as well. It must be taken at the midnight hour and the foot amputated. The foot must then be carried secretly in the pocket until by chance the owner happens upon a hollow stump in which water has collected from recent rains. The foot is then dipped three times into this water and the charm is complete."

"Among the negroes and uneducated whites of the South the reputed possessor of this potent talisman is at once feared and respected."

Silk Cultivation in China.

That the secret of the silkworm was jealously guarded is well known, and a tradition is told of a Chinese princess who tried to import the insects into the country whither she was going. Certainly it seems probable that silk making was as long ago as 2800 B. C., when Emperor Chin Nong, to whom is ascribed the invention of the plow, is said to have begun the planting of mulberry trees, and his successor, Hon-ti, intrusted to his wife the investigation into the rearing of the silkworms, in the year 2602 B. C. Certainly her work was successful, and her name to this day is held in high honor, an encouragement to those who, like Lui Tsu Si Ling Chi, devote their time to the care of any form of investigation work.

Inheritance of Insanity.

According to Doctor Kener, director of a large lunatic asylum in Roumania, insanity, when transmitted, occurs at an earlier age in each successive generation. Of 250 pairs of parents, reports the Journal of the American Medical Association, and offspring, 39 per cent of the offspring were found to have had their first attack of insanity before the age of twenty-five, a considerable portion being congenital imbeciles. Mothers transmuted much more frequently than fathers, and daughters are affected more often than sons; also the offspring are affected at about half the age of the parent, being in most instances either congenital imbeciles or cases of adolescent insanity.

The World in Stone.

At Swaine in England is a conventional representation of the globe—conventional, that is, in design, but not in other respects, for the globe is hewn from rock, and measures 11 feet in diameter, and weighs 40 tons.

The history of this unique geographical record is interesting, for it is the result of the successful building operations of two local men who migrated to London, and amassed huge fortunes, then returned to their native town and lavished decorations in stone on every available part of Swaine.

He Explains.

"What was that pretty woman saying to you, huh?"

"She was telling me that she voted for me, my dear. Nothing more."—Louisville Courier-Journal.

From The Benedictine Sisters

The following from the Benedictine Sisters, Holy Name Convent, San Antonio, Fla., is of value to every mother: "We have just received shipment of Foley's Honey and Tar. It is a household remedy. We have used it since we knew of it, for our children especially, and always found it beneficial." Adv.

HAD TOUCH OF COMIC OPERA

Chinese Armies Stopped Fighting to Let United States Vessel Pass Down the River.

Ensign William H. Galbraith, navigating officer of the United States destroyer Hart, attached to the United States Asiatic squadron in Chinese waters, in a letter tells of the intensified work placed on the hands of the vessels of the squadron in the Far East by the operations of the Chinese civil war now in progress between the Pekingese and the Cantonese sections of the nation. When armies representing these hostile sections approach cities in which American citizens are in business there is much excitement on the part of the Americans and they call urgently for the protection of the fleet, says the Columbus Dispatch.

Recently the Hart received a radiogram call from an officer of a United States merchant vessel, stating that his vessel 50 miles up one of the Chinese rivers was being detained. The captain was anxious to put to sea, and would the Hart see that it was permitted to depart? The Hart got on the job at once and found when the scene was reached that there was no governmental authority holding the United States ship up, but the Cantonese army was drawn up on one side of the river and the Pekingese on the other and a battle was in progress, with the river, through which the United States ship must pass, between them. Naturally the captain did not fancy risking the shots that were passing across the channel. The respective commanders kindly suspended the fighting until the merchant vessel had passed.

SUCCESS SLOW IN COMING

Discoverer of Vulcanized Rubber Was at One Time Compelled to Beg Money for Bread.

Charles Goodyear, who became a millionaire and was the inventor of vulcanized rubber as well as many other forms of the tree sap products, at one time was forced to beg for \$5 to keep him from starving. In 1834 he discovered that rubber could be vulcanized. It was an accident. He attempted to remove some bronze dust from a bit of rubber cloth, and after trying several chemicals tried aqua fortis, a chemical largely composed of sulphuric acid. It failed also, and he threw the cloth away. A few days later he picked it up by chance, and noted the spot rubbed by the aqua fortis had hardened and would stand a degree of heat that would have melted it in its former state.

He applied his discovery, and soon was wearing rubber shoes, coats, hats and other garments, and had a small fortune by the right of his discovery. But a year passed, and his goods were discredited and returned, rotting and broken. He was ruined. He started in again to discover a method that would vulcanize the rubber, and for ten years he kept at it, his life a long misery of hunger and cold and crushing poverty. His success came suddenly and soon he was rich beyond his wildest dreams.
