

COFFIN OF ATTILA

Burial Place of the Great Hun Leader Reported Found.

Tradition as to Final Resting Place of "Scourge of God" Seems to Have Been True.

A correspondent of the London Times reports the discovery in southern Hungary of what archeologists declare is the coffin of Attila the Hun, known to the Christian nations of the Fifth century as "the Scourge of God." The find was made in the bed of the Aranka river, a small tributary of the Theiss between the towns of Szegedin and Temesvar.

This discovery seems to support the persistent tradition regarding the great Hun leader's burial which has lived for almost 1,500 years. His death occurred soon after his invasion of Italy and on the night of his marriage. His body was carried across southern Austria at the head of his army and in Hungary, at a spot which was known only to a few of his chief officers, the corpse was incased in three coffins, the first of gold, the second of silver, and the third of iron, and buried. The captives who were assigned to the task of burying the body were strangled in order that the place of the internment might be kept a secret from Attila's foes.

For centuries there has been a great fascination in the search for relics of the Hun, for it was thought that they might throw some light upon these strange, almost unknown Astarte invaders of Europe. The country along the Aranka river and around Szegedin has been industriously searched for evidence of their successes in Europe.

Some rare and beautiful gold vessels have been unearthed in this region. These relics are preserved among the Hapsburg treasures. While these have been identified as belonging to some of the peoples of the early migration from the East they have not been proved definitely to have belonged to the Huns. The latest find is thus especially noteworthy; not only is it the most valuable, but at the same time it is the most sought after of all the Hun treasures.

The memory of Attila and his bands of savage barbarians was revived during the World War. The devastation they wrought in the lands over which they swept seemed to furnish the only apt comparison for the desolation left by the modern invader. The people of central and southeastern Europe would question today if the ravages of their country by the Fifth century Huns left in their trail as much suffering and sorrow as were left by the World War.

Important Medical Discovery.

Great possibilities have been suggested by the method of making new blood discovered by Dr. W. J. Fenfold of the Australian Commonwealth Serum Institute, London. In preparing diphtheria and other serums, the plasma or fluid of the blood drawn from horses has been separated after the red corpuscles have settled, and the latter have been thrown away. Conceiving that this practice might be improved, Doctor Fenfold returned the red corpuscles into the veins of a horse that had been bled. The result of this injection was an astonishing quickening of the formation of new blood, and while the normal average of blood in a horse is 38 quarts, it was found that 50 quarts in a week could be drawn from the animal without lessening vitality more than the usual smaller bleeding. The composition of the blood was not materially affected. Following the first experiment, the red corpuscles have been returned to the entire 30 or 40 horses bled in the institute, and the effect is the same in all.

Lightship's Perilous Voyage.

Ships were imperiled when Nantucket Shoals beacon, the leading mark for transatlantic shipping making port at New York, was torn from its lofty and important station by a hurricane. After inquiry from several ships that missed the floating beacon and almost anxious search by a wireless combing of the sea, the mystery of the lightship's disappearance was solved when she put in at New Bedford. The lightship had been thirty-six hours making port on a run of 100 miles. The hurricane, which blew her away and snapped the moorings, reached a velocity of ninety miles an hour. Mate L. O. Johnson, her keeper, said that it was much as he and his fifteen men could do to hold their own. Light vessels are not built for speed, and their emergency equipment is not often called on.

Overs Her Life to Parrot.

Her parrot's shrieks saved the life of a young woman in New York city. The parrot watched its mistress mix up a tumbler of iodine and vodka, alcohol and drink it. When she dropped to the floor the parrot shrieked. The woman had quarreled at the breakfast table with her husband, who had gone into the front room, while his wife went into the kitchen. As soon as she discovered what the parrot's screams meant, he administered milk and eggs as an antidote. A doctor summoned by a policeman said that the young woman would recover.

Chamberlain's Cough Remedy

"Everyone who has used Chamberlain's Cough Remedy speaks well of it," writes Edward P. Miller, Abbotstown, Pa. "People who once use this preparation are seldom satisfied with any other. It is excellent to allay a cough or break up a cold."—Adv.

URUGUAY RICH IN AMETHYSTS

Gems Found in "Geodes," Which is Nature's Way of Storing Precious Stones for Posterity.

The northwestern part of Uruguay is a newly discovered field for the production of amethysts, which occur in "geodes." The geodes, so plentiful that they are picked up in the fields, are carried on mule-back or in carts to the nearest railway station and shipped in barrels to Salto, whence they are transported by river boat to Montevideo.

Naturally, it will be asked, What is a geode? Originally, it was a hole in rock. Water percolating through the rock deposited silica, making a lining for the cavity. The lining grew thicker and thicker, and after a long time, if the rock were broken or "weathered" to pieces, a hard nodule would drop out. The nodule is a geode, and if, as sometimes happens, the silica has formed crystals inside of it, colored by metallic salts, the geode is a little jewel box containing amethysts.

A beautiful statuette, eight inches high, of a woman dancing, has recently been placed in the Morgan Gem hall of the American Museum of Natural History, in New York city. It is carved out of a perfect block of translucent sapphire (blue quartz) from Uruguay.

Climate and Agriculture.

The surprising idea that an arid climate is the most favorable for agriculture is explained by a report on the Columbia Basin Irrigation Project in the state of Washington. In such a climate plant growth is stimulated by almost continuous sunshine, there is no night chilling of the soil following cloudy days, and crops are harvested promptly without spoilage by rain, the products being greatly improved and the harvesting cost lessened. The chief advantage of all, however, is control of the water, which by artificial irrigation can be supplied at the best time and in the quantities needed by the crops. The scant rainfall of the Columbia basin area has been a preparation for the new method, for the moisture has not been sufficient to leach away the stored plantfood, but there has been drainage enough to prevent the accumulation of alkali salts, the most soluble of the earth's constituents.

A Mastered Fear.

Government officers in India compile queer statistics. For example, they have recently reported that in 1919 the persons who came to their death by snake bite numbered 20,273, and that, in the same 12 months, 58,416 snakes were killed. Further, there is the record of 1,162 deaths by tigers, 469 by leopards, 294 by wolves, 201 by wild boars, 183 by crocodiles, 118 by bears, 93 by elephants and 33 by hyenas. Whatever may be the fear of wild animals among human beings it does not seem ever to have deterred settlement in new lands or persuaded people against living, as they have in India for centuries, as the neighbors of poisonous serpents and ravishing animals.—Toledo Blade.

Good Reason.

Grandmother had been talking to four-year-old Mary Ellen about becoming angry so easily. After the little girl had listened a few minutes she thought it time to tell of some of her good qualities, so she said: "Yesterday my dolly got stepped on and broken and I didn't cry a bit or scold anybody."

"That was fine," approved grandmother very much pleased. A little later she happened to remember the incident and turned to Mary Ellen: "Why did you stop on your dolly yesterday?" she asked. And back came the enlightening answer: "Why, I did, grandma."—Exchange.

THE WORLD'S FOREMOST ENGINEER

Were it not for the assistance the Department of the Interior has rendered, our wonderful irrigation systems, waterworks and similar projects could never have been developed. Progress such as this is vital to all of us. This phase of our government's endeavors to further prosperity is graphically told in the fifth of the series of articles which we issue each month.

To receive this story and the ones previously published send us your name and address. There's no cost to you—nor are you placing yourself under any obligation.

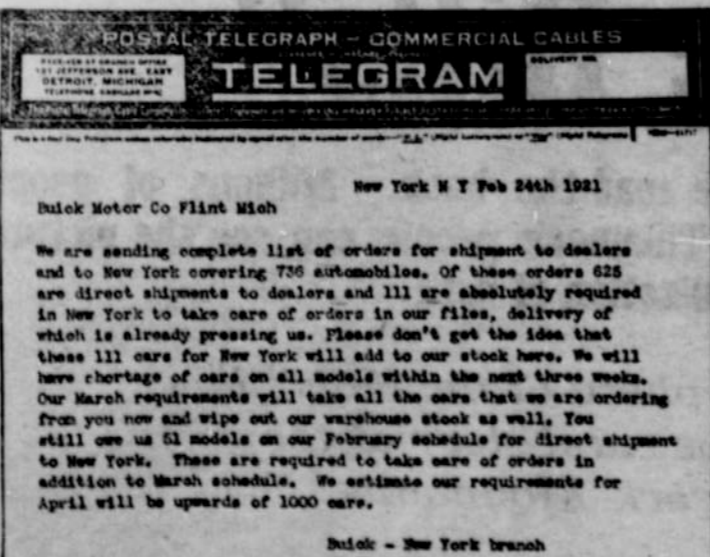

Tillamook County Bank

BUICK

THESE two telegrams, one from the far East, the other from the far West, are typical of the many telegrams which are being received from every section of the country asking for immediate shipment of Buick cars and for an increase in dealers allotments.

They prove in a most conclusive manner the demand for Buick cars—a demand which is particularly gratifying now when motor car values are being scrutinized as never before and when final sales are consummated upon the basis of greater relative values and actual demonstrated worth.

Active buying, too, is stimulated by a realization of the periodical shortage of Buick cars and the desire to insure Spring deliveries by the immediate placing of orders.

A good indication of the demand for Buick on the Atlantic Coast.

This telegram demonstrates Buick popularity on the Pacific Coast.
