**MALNUTRITION!!**

What is malnutrition? It is a weak condition of the body caused by lack of nourishment. The food may not contain some element needed for blood repair, or it may lack something for bone repair. The whole structure is weakened thereby. Then some day an organ gives away. Life is cut short.

MILK is a wonderful nutrient material that tones up the blood, corrects the secretions of glands and in due time repairs the damaged organ or tissue.

**DAIRY FACTS**

**COW TURNS FEED INTO FAT**

Great Care Should Be Exercised in Selecting Fats and Starches, Giving Much Protein.

If a dairy cow is inclined to lay on fat, there is a very definite step to be taken. First, use great care in selecting her feed, limiting the fats and starches, and feeding heavily on protein. If she still turns her feed into fat instead of milk, let her have her own way, and prepare her for the fulfillment of her destiny—the packing house.

**CLEANLINESS MAY AID HEALTH**

Fowls Are Shut Up During Winter Months and Suffer if House is Not Cleaned Often.

In the summer time the poultry keeper is naturally inclined to slight cleaning the poultry house, as the fowls usually have the run of the farm. In the winter, however, the farm flock is shut up, and its health can easily suffer on account of neglect to keep the house clean.

**USE PULLETS FOR BREEDERS**

Only Those Fowls Which Have Proved Heavy Layers in Winter Should Be Selected.

If some pullets must be used for breeders, only those which have laid heavily during the winter should be selected. The heavy layers among the pullets will have a comb pale skin, good width between pin-bones, soft abdomen, and at least four fingers body depth.
