Complete Set of Abstracts of the Records of Tillamook County

## Children Using Milk Make Most Rapid Progress

Fifty two thousand five hundred children of Los Angeles were questioned as to the amount of milk they consumed daily, their ages were recorded and heights and weights obtained. The heights and weights of these children were compared on the basis of their consumption of milk, and the figures revealed the startling fact that in every age, without exception, the milk-using children were taller and weighed more than the non-milk using children. It was also found that the milk-using children made more rapid progress in their studies. In every grade the milk-using children were slightly younger than the non-milk using children. The milk using children gained on the average 2.28 years on the non-milk using children, from the kindergarten to the eighth grade.

EVERY CHILD SHOULD HAVE A QUART OF RAW MILK DAILY. ORDER GOLDEN ROD DAIRY CLARIFIED MILK.
