NOTICE OF SHERIFF'S SALE

By virtue of an execution and order of sale duly issued by the Clerk of the Circuit Court of the County of Columbia, State of Oregon, dated the 19th day of October, 1926, in a certain action in the Circuit Court for said County and State, wherein Munson - Rayner Corporation as plaintiff recovered judgment against A. L. Fenner, as defendant, for the sum of Six Hundred Twelve and 87-100 Dollars, and costs and disbursements taxed at Thirty-one and no-100 Dollars, on the 12th day of October, 1926.

Notice is hereby given that I will on the 23rd day of November, 1926, at the West Front Door of the Court House in St. Helens in said County, at 11:00 o'clock in the forenoon of said day, sell at public auction to the highest bidder, for cash, the following described property, to-wit:

All of Lot Four (4) in Block Six (6), in the original Townsite of Vernonia, sometimes called "Vernonia Proper", according to the map and plat thereof on record in the office of the County Clerk, and situated in Columbia County, Oregon, taken and levied upon as the property of the said A. L. Fenner or as much thereof as may be necessary to satisfy the said judgment in favor of Munson Rayner Corporation against said A. L. Fenner with interest thereon, together with all costs and disbursements that have or may accrue.

J. H. WELLINGTON,
Sheriff.

Dated at St. Helens, Oregon, October 19th, 1926.

Date of first publication October 22nd, 1926.

Date of last publication, November 19th, 1926.

"Inside" Information

A thick slice of ham, with raw sliced potatoes spread over it, and baked in milk for about an hour and a half, is usually good. Sprinkle the potatoes with flour when you put them in the dish.

Milk soups and milk puddings contribute to the total amount of milk the children take, as do milk sauces and flavored milk drinks. Sometimes a drug store ntraw will help in persuading a finicky child to try one of these milk drinks.

The only way to be sure of a piece of colored goods won't run is to make a sampl home and wash it. If you think it might fade, cover part of it and expose the rest to sunlight for at least a week. Household methods of setting colors are useless. Keep bread in a ventilated box, crackers in tight tins.

Bland, Sweet, Savory, Tart

Serve a vegetable dinner, similar to the restaurant combination known as "vegetable plate" onct in a while. To be satisfying it must contain enough protein to make it substantial. To be appetizing, it must have a variety of flavors, the bland, the sweet, the savory, and the tart. There must be contrast of texture also, such as the soft, the hard, the rich and the crisp. Here are a few good combinations: Creamed potatoes, buttered string beans, beets or beet greens with vinegar or lemon juice, raw celery; cabbage scalloped with cheese, carrots, and fried potatoes; baked sweet potatoes in season, spinach with hard-boiled egg, raw cucumbers; scalloped corn,

steamed carrots, swiss chard, raw sliced tomatoes; baked eggplant, buttered lima beans, water cress; fried tomatoes, mash turnips or squash, baked potatoes, raw celery.

Self-Fed Sows and Pigs

In tests conducted by the United States Department of Agriculture as to the efficiency of self-feeding and hand-feeding of sows and their pigs, both sows and pigs on the self-feeders looked better and were more thrifty than those in the hand-fed lot. Furthermore, they required less feed per 100 pounds of grain and were ready to market at an earlier date than those fed by hand. In breeding practices, better results likewise were obtained with the sows in the self-feeder groups.

Prunes.

The total production of dried prunes in the United States in 1925 has been estimated at 167,000 tons. Commercial prune culture is located mainly in California, Oregon, Washington and Idaho, the production centering in Santa Clara and Sonoma counties, Cal. The establishment of all-water transportation from Pacific coast points to European countries has greatly aided the exportation of prunes, while the advertising of their food has increased domestic consumption.

Inch of Rain is 100 Tons to Acre

Several pounds of water are necessary during the life of a cultivated plant to produce 1 pound of mature matter. Thus a plant such as wheat or corn requires each day an amount equal to several times its own weight. It is not often that nature supplies just the amount required for best development throughout the growing season. A much greater quantity of water is supplied to the soil in a moderately heavy rain than is usually supposed. With a rainfall of 1 inch, without loss by run-off, more than 100 tons of water is supplied to 1 acre of land.

Mildewed Leather

The simplest way to prevent leather articles from mildewing is to keep them in a well-ventilated, dry, well-lighted place, preferably one exposed to the sunlight. When mildew develops, it should be washed off with soap and warm water, or simply wiped off with a moist cloth, drying the leather well afterwards. These measures are more satisfactory than the application in the home of preparations designed to prevent the growth of mildew.

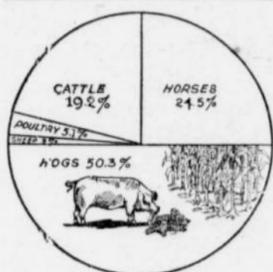

The Thirsty Strawberry

Owing to the large water requirements of the strawberry, especially at the season of ripening, it has been found advantageous to provide irrigation for the crop even in humid regions. In seasons of sparse rainfall other growing conditions, such as sunlight and temperature, are likely to be most favorable, and fields provided with irrigation facilities during such seasons may yield two or three times as much as those without such equipment. The desert quality of the fruit from such irrigated fields is often superior and the duration of the harvest can be materially prolonged. Irrigation is usually practiced in localities adjacent to large centers of population and varieties which are adapted to such conditions are selected.

Potato Yield

The production of the potato, which for more than 200 years has been most of the staple field and garden crops of the United States, has kept pace with the growth in population on the basis of about 3 1/2 bushels per capita. In recent years there has been an increase in the per-acre yield of potatoes. Reports for October indicate an acre yield of 109.6 bushels for 1926. The average for

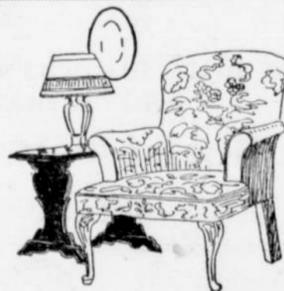

Cutting Down Corn Surplus

(Sears Roebuck Agricultural Foundation)

Whether you prefer your corn nicely buttered on the ear, or in the form of roast pork with fried apples, there are on the average 25 1/2 bushels of corn coming to each person in the United States every year, according to experts of the Sears-Roebuck Agricultural Foundation. In 1925 there was a bit more; this year there will probably be a few ears less unless plenty or all of us just the same.

Less than a fifth of all this corn leaves the farm. Excluding a small fraction of the best grade that is kept at the seed purposes, 81% of those 2,850,000,000 bushels runs around on legs in the following forms: Hogs, 50.3%; horses, 24.5%; cattle, 19.2%; poultry, 5.1% and sheep, 0.9%.

Comfort and Convenience

The management caters to commercial and local guests. Always at your service.

Total	\$10,595.50		

And notice is also hereby given that the said City Council of said City, sitting as a levy board, will hold a meeting at the City Hall in the City of Vernonia, Columbia County, Oregon, on Thursday evening November 25, 1926, at the hour of 8 o'clock P.M. at which time and place all persons, who shall be subject to such tax levy, when the same shall be made, may appear and be heard in favor of or against said tax levy, or any part thereof.

Dated this October 29, 1926.

(Seal)

Attest: D. B. Reasoner, City Recorder.

Guy R. Mills, Mayor.

the 5-year period 1921-25 was 106.9 bushels. Increased yields are attributed to seed selection and treatment, better fertilization, improved cultivation, and crop rotation.

Good Beef Cow

A good beef cow is smooth, well proportioned with short legs, short back, short and broad head, wide muzzle, glossy hair, and a loose pliable skin. She should have a good udder and give enough milk to feed her calf well. Beef cows are usually lower set, blockier, more symmetrical, carry flesh, and have smaller udders than dual-purpose cows. Do not keep shy breeders or cattle with contagious abortion, lumpy jaw, or tuberculosis.

Phone, send or bring in a classified advertisement, any time before noon Wednesday.
