Better Service and More Tire Mileage

Changing tires around from time to time will result in longer tire life and better all 'round service, according to Roy Clark of Vernonia Service station Firestone dealer.

"When a motorist buys a new spare, we recommend that he put it on the right rear and give that tire a rest for a while," he stated. "The other tires should be changed, too, left front to left rear, etc. Each wheel puts certain strains on a tire different from that of the other wheels, and by using the tire on each in turn the wear is evenly distributed and the tire lasts longer and gives better service."

"It is also important to have tires looked over frequently for minor cuts and bruises, etc. and to have small repairs made promptly. Tires should be inflated to the correct pressure as under-inflation of a few pounds will often result in the loss of hundreds of miles of useful service. Valve caps, screwed down tightly by hand, should always be used to prevent air leaks."

"If motorists will give their tires ordinary care and attention they will have less trouble and enjoy greater tire satisfaction."
